World news

Business summary

Palestine targets attacked by Israel

Five people were wounded when Israeli helicopters launched three attacks against Palestinian targets near Sidon, southern Lebanon, and Israeli aircraft dropped targets near Sidon, southern Lebanon, and Israeli aircraft dropped targets near Sidon, southern Lebanon.

Chrysler acquires Italian car group

CHRYSLER, US car group which for the past year has shown a growing interest in buying into Italian sports car makers, agreed to acquire 100 per cent of Lamborghini, Bologna-based producer of luxury cars.

Indonesian poll

President Suharto's ruling Golkar party appeared to be heading for a landslide victory in Indonesia's national elections, taking 80 per cent of the vote in initial returns.

Japanese loan plan

Japan plans to lend up to \$30bn to Latin American countries as part of a policy of taking a broader role in the world economy, a special envoy of Japanese Prime Minister Yasuhiro Nakasone said in Washington.

Iranian missile site

Iran has set up a missile-launching site in captured Iraqi soil within range of Kuwait and its oil tankers, a Gulf military source said. Meanwhile, Iraq said it sank a large Iranian warship and nine smaller boats when they attacked an observation post in the Gulf.

Riot in Tunis

Foreigners were molested and police cars set on fire during an anti-government demonstration by Islamic militants in central Tunis.

Envoy recalled

Turkey recalled its ambassador to Washington for consultations over proposed cuts in US aid.

N-power shunned

Fifty-three per cent of the Dutch population want to scrap two existing nuclear power plants in the Netherlands and 87 per cent do not want more atomic plants, according to an opinion poll.

Security risk

Sir Maurice Oldfield, former head of MI6, Britain's secret intelligence service, who died in 1981, was "a potential risk to security" because of his homosexual practices, Prime Minister Margaret Thatcher said.

Nuclear shutdowns

An earthquake hit northern Japan and triggered safety mechanisms on three nuclear plants which forced them to shut down.

Doctors' stoppage

Most of Norway's 12,000 doctors staged a three-hour nationwide strike after the Government refused to allow an increase in charges by private-sector physicians.

Strike continues

About 1,700 striking miners in Labi, north-west Yugoslavia, defied a management ultimatum to return to work. The miners are demanding a 100 per cent wage increase.

Coffee Board fraud

The Coffee Board of Kenya, the statutory body which handles Kenya's coffee sales, lost millions of shillings (pounds sh. 51m) through illegal and fraudulent deals, according to documents submitted to Parliament.

New gold coin

Australia launched the Nugget - a series of gold coins aimed at capturing a slice of the market traditionally dominated by the South African Kruggerand.

Boesky pleads guilty to Wall St securities fraud

BY WILLIAM HALL IN NEW YORK

THEY should not be charging this guy, they should be awarding him a Grammy award for singing, observed one hard-drinking court reporter as Mr Boesky, the key figure in Wall Street's fast-growing insider trading scandal, finally had his day in court yesterday.

Six months after he agreed to pay a \$100m penalty for illegal insider trading, unleashing a sweeping investigation into Wall Street's questionable business practices, a sun-tanned Mr Boesky, flanked by his lawyers, made his first public appearance in a packed Manhattan court yesterday morning. His famous grin was nowhere to be seen.

He pleaded guilty before Judge Morris E. Lasker to filing a Schedule 13-D with the US Securities and Exchange Commission concerning the purchase of shares in the Fischbach Corporation, a New York electrical contractor which has been the target of several corporate raiders.

He admitted there had been a secret agreement with certain unnamed conspirators under which he agreed to buy shares in Fischbach and would be "made whole for any losses" he might suffer on the purchase. Fischbach Corporation was one of many companies in which

Mr Boesky and his associates have been involved.

The guilty plea was part of the original deal worked out between Mr Boesky's lawyers and the US Justice Department under which the 50-year-old financier would plead guilty to one criminal charge and help the US Government with its investigations, in a bid to win a lenient sentence.

Judge Lasker, sensitive to accusations that he is the most lenient judge in the district and conscious of widespread criticism that Mr Boesky is in danger of being let off too lightly, told Mr Boesky's lawyers he "wanted to talk turkey today."

Did their client understand that he would face up to five years in jail and a fine of \$250,000 for his crimes? he asked. Then he asked a grim-faced Mr Boesky if anyone had told him he would get a lighter sentence if he pleaded guilty.

Mr Boesky answered in the negative and said no-one had put pressure on him to plead guilty.

After assuring the judge that he was in good health, if not high spirits, a black-suited Mr Boesky was whisked away in a limousine pursued by an army of television cameramen. If all goes according to plan he is scheduled to be back in court at 9.15am on Friday August 21 to hear whether Judge Lasker is as lenient as he is supposed to be.

After the court hearing, Mr Boesky's lawyers, the crusading district attorney whose battle to clean up Wall Street has made him a frontrunner to take over the SEC when Mr John Shad, the current chairman, retires, held another news conference where he also

went to some lengths to defuse criticism that Mr Boesky was being let off too lightly.

He stressed that, unlike Mr Dennis Levine, Mr Boesky's former investment banking associate, who started co-operating only after he was arrested, Mr Boesky had offered to help Mr Giuliani and the SEC at a very early stage in the investigation. It would have taken two years to get to the stage where the US Government might have been able to convict Mr Boesky, he stressed that. He stressed that by then, many of those he was pursuing might have disappeared.

Ericsson and Matra win battle for control of CGCT

BY PAUL BETTS AND DAVID HOUSEGO IN PARIS

ERICSSON of Sweden in partnership with the French Finance Minister, de Gaulle and defence group will take over control next week of Compagnie Generale des Telecommunications (CGCT), the French state-owned public telephone exchange manufacturer which has been at the centre of an international bidding battle for the past year.

This follows the controversial and surprise decision of the French Government yesterday to sell the state group for FF 500m (\$82.4m) to the Ericsson-Matra consortium rather than to rival bids from Siemens of West Germany and AT&T of the US in partnership with Philips of the Netherlands.

The decision provoked an immediate and angry response from both Washington and Bonn which had lobbied for their candidates. The US Government claimed yesterday that the French decision risked fuelling protectionist sentiments in America. The US embassy in Paris issued a statement expressing disappointment and criticising "certain political pressures" against the AT&T-Philips bid which had long been seen as the front runner to win the CGCT contract.

In New York AT&T said political considerations had clearly been a major factor in the French Government's decision. "It is not acceptable to have a US market that is open to all comers, while markets in other countries are protected," it said.

Siemens said yesterday it regretted the French decision which had to be seen in a political context.

However, Mr Edouard Balladur, the French Finance Minister, defended the Government's choice, claiming that it represented the best solution for CGCT.

But the decision to select the outsider was seen as a political compromise by the French Government, aimed at avoiding even more acrimonious reactions from Washington or Bonn had either the American or German bid been selected.

The French evening newspaper Le Monde described the Government's decision as "Swedish neutrality" in a front page editorial yesterday.

Ericsson said yesterday that, following the CGCT agreement, France now becomes one of our worldwide connections. The Swedish telecommunications group had long been the favoured partner of CGCT's management.

Ericsson will own 25 per cent of CGCT, and through CGCT it will become a second source to the French telecommunications authority for public telephone exchanges supplying it with its AXE digital switch. The main supplier of the French telecommunications authority is Alcatel, the telecommunications group controlled by France's Compagnie Generale d'Electricite.

Mr Hans Goltz, Ericsson's vice president and the Swedish group's main negotiator in the CGCT deal, said Ericsson planned to set up in France a research and development centre for public exchanges. The Ericsson partnership is injecting between FF 150m and FF 200m

Guinness to write off £125m bid costs

By Clive Wolman in London

GUINNESS, the international drinks company, is writing off £125m (\$200m) to cover the costs of "unusual transactions and arrangements" made last year during and after its £25m takeover battle for Distillers, it announced yesterday.

The company said it had now identified all the recipients of the £25m which was paid out, apparently by the authority of Mr Ernest Saunders, the former, dismissed chief executive, for unspecified services connected with the takeover battle.

Many of the recipients of those payments, which may have breached the criminal law or Companies Act, have been hidden behind offshore companies. More details are to be published in a letter to Guinness shareholders on May 5.

The £125m of these payments which have not yet been recovered from the recipients is included in the £125m provision. Another £40m of the provision is to cover "assets which are subject to disputes and legal actions."

This includes the disputed £7.6m payment to the merchant bank Henry Ansbacher, which led to the resignation of three directors of Morgan Grenfell, Guinness's merchant bank advisers during the bid, and another £50m payment to Bank Leu of Switzerland.

The maximum loss on these payments, which were intended to induce investors from any loss on holding Guinness shares, is much less than £40m. But the company has refused to say what the other potential losses are.

The remaining £88m which has been written off is attributed to the £100m investment (then worth £88m) made last May in a limited

Arms negotiators dismiss Europe's defence fears

BY EDWARD MORTIMER IN LONDON AND WILLIAM DUFFELL IN GENEVA

THE US and the Soviet Union yesterday hinted at impatience with West European misgivings that might delay an agreement on the removal of intermediate-range nuclear forces (INF) from Europe.

As talks resumed in Geneva between their armed negotiators Mr George Shultz, the US Secretary of State, brushed aside might result in a nuclear-free Europe with a preponderance of Soviet conventional power.

In Moscow, Mr Boris Paryshev, deputy Foreign Ministry spokesman, warned that the "understandable desire" of the US to consult its allies should not become "a barrier" to agreement.

In Geneva meanwhile, the chief US and Soviet negotiators, Mr William Clark and Mr Alexander Orlov, met for an hour and agreed there would be three meetings a week on the reduction of missile levels and its verification, with an additional meeting each week to draft the opening and closing paragraphs of the proposed treaty.

Mr Clark said that at routine meetings he would be represented by his deputy, General Vladimir Medvedev.

Mr Shultz, answering questions from European correspondents on a US Information Agency "Worldnet" satellite link, said: "We shouldn't be afraid to take yes for an answer to our own proposal."

He was referring to the "zero option" on INF originally proposed by the West in 1981 and now being pushed by Mr Mikhail Gorbachev, the Soviet leader.

The US Secretary of State stressed repeatedly that "very potent nuclear armaments... remain in Europe, committed to Europe, and are part of the flexible response policy of NATO," not affected

The US invited Soviet experts to visit its plant for destroying chemical weapons, and a banker used for storing chemical weapons. Washington also agreed to discuss a proposal that each side should conduct nuclear tests at the other's test sites, Page 3.

by the current negotiations.

"We have every intention of keeping that nuclear deterrence in place into the foreseeable future," he said. "You do have a nuclear capability that's quite awesome left, even after these (INF) are eliminated."

Mr Shultz added that the US was engaged in active consultations with its allies on whether to accept Mr Gorbachev's proposal to eliminate all "short-range" intermediate nuclear forces (with a range of between 500 km and 1000 km), or to make a counterproposal to equalise such forces at a level lower than the "seven or eight hundred warheads" deployed by the Soviet Union.

In a later answer he amended this figure to "six or seven hundred."

But he implied strongly that his own preference was for the former, since at present "we have none." It would make no sense, he said, for NATO to decide to insist on retaining the theoretical right to deploy up to a certain level, unless it then proceeded to deploy that number in practice.

Mr Shultz made no mention of the 72 shorter-range Pershing 1 missiles deployed by West Germany, which have nuclear warheads controlled by the US.

West European foreign ministers are to consider their attitude next Tuesday at a specially convened meeting of the Western European Union in Luxembourg.

US economic growth during quarter at three-year peak

BY STEWART FLEMING, US EDITOR, IN WASHINGTON

THE US economy grew at its annual rate of 4.3 per cent in the first quarter of 1987, the strongest quarterly rate of expansion for three years, the US Commerce Department reported yesterday.

But most private economists believe that extraordinary short-term gains in economic activity during the sluggish fourth quarter of 1986 and the first quarter of 1987 account for much of the first quarter gain, and that the pace of expansion in the first quarter will not be sustained through the rest of the year.

However, the report did confirm that inflation in the US is picking up. "It is something we should keep an eye on but should not panic about," Mr Robert Ortner, the Commerce Department Undersecretary, said.

The broadly based GNP price index increased 3.6 per cent in the first quarter compared with 2.7 per cent in the fourth quarter of last year. Concern about a revival of inflationary pressures has contributed to wide swings and sharp falls in bond prices on Wall Street.

As many private economists had projected, a surge of stockbuilding by private industry in the first quarter

expanded steadily in both quarters.

The volatility in quarterly economic trends is expected to be evident in the second quarter, which it is expected will be hit by the end of the stockbuilding. The important automotive industry is cutting production back sharply.

For the year as a whole real growth of between 2 1/2 and 3 per cent is the consensus projection of private sector economists.

But many private economists would agree with Mr Jason Benderly of Goldman Sachs that the achievement of such a growth rate will depend heavily on a continued steady decline in the US trade deficit. "If we do not get the trade improvement we would really be at risk," he said.

Mr William Griggs of Griggs and Santow is one of those who, while expecting growth to continue, believes that there is a strong chance that this year growth will be lower and inflation higher than most private economists are projecting. As a result, the risks of a recession are increasing.

EUROPEAN NEWS

Brussels assaults public contract barriers

BY WILLIAM DAWKINS IN BRUSSELS

THE EUROPEAN Commission is working on plans for the wholesale scrapping of barriers to open tendering throughout the EEC for public contracts in telecommunications, water, energy and transport.

Lord Cockfield, the Commissioner responsible for the internal market, has asked his experts to produce proposals before the end of the year to provide for free bidding from companies in all member states for public contracts in these four areas.

They are believed to represent the bulk of the Ecu 400bn (£282m) worth of non-military public contracts let in the EEC every year. But member states have never been able to agree to include them in existing public purchasing regulations, partly because of differences in the levels of public ownership in the different sectors.

The result has been to leave open a large loophole for member states which wish to avoid present EEC rules to encourage trans-border bidding, by declaring that any public contract is covered by one of the so-called "excluded" areas.

Earlier Commission attempts to extend open public purchasing to the areas now being considered have foundered because member states with highly subsidised public sectors have been unwilling to expose themselves to competition from more efficient counterparts. West Germany, for instance, has been anxious not to expose its public railway companies to competition from their export-oriented French equivalents.

But Commission officials hope to overcome this problem by liberalising purchasing in all four sectors simultaneously, so that individual member states can make up for a loss of competition in sectors where they are weak by bidding more freely across their borders in sectors where they are strong.

The proposal, which will take the form of one or a series of draft directives, will mark the Commission's fourth major attempt in the past year to bring freer competition to public purchasing.

Romania aims to repay debt early

By Patrick Blum in Bucharest

ROMANIA INTENDS TO repay more than \$20m of its foreign debt this year including up to \$10m in early repayments, according to Bucharest officials.

The aim is to "liquidate as soon as possible" Romania's net external debt, estimated at \$5.5bn at the end of 1986. Western observers here say some \$200m have already been paid in advance during the first quarter of this year.

US opens chemical weapons units to Soviet experts

BY WILLIAM DUFFLORCE IN GENEVA

THE US yesterday invited Soviet experts to visit its plant for destroying chemical weapons and to inspect a bunker used for storing chemical weapons. It also agreed to discuss a proposal that each side should carry out nuclear tests at the other's test sites.

A suggestion by Mr Nazarkin that plants could be monitored by sampling air and effluents on their perimeters was made-quate, Mr Hansen said. The Soviet experts would discover by visiting a US storage bunker that these "external configurations" did not exist.

These moves, announced at the UN conference on disarmament by Mr Lynn Hansen, assistant director of the US arms control agency, are seen by Washington as opportunities for persuading Moscow that US insistence on provisions for "on-site" inspection and measurement in arms control treaties is justified.

Mr George Shultz, the US Secretary of State, and Mr Eduard Shevardnadze, his Soviet counterpart, agreed during their talks in Moscow last week to have experts visit each other's sites for destroying chemical weapons, Mr Hansen revealed.

Their understanding followed Mr Mikhail Gorbachev's announcement in Prague on April 10 that the Soviet Union had stopped making chemical weapons and was building a destruction facility.

Mr Yuri Nazarkin, the head of the Soviet delegation to the UN conference, said Moscow would carefully consider Mr Hansen's proposal that the Soviet experts should visit the US plant at Tooele, Utah, during the week beginning October 12.

Soviet officials have urged that an international convention banning chemical weapons be completed this year. One obstacle is the US standpoint that only "on-site, in-site" inspection on challenge of suspected chemical weapons

plants can ensure that states do not cheat.

Mr Hansen noted that Moscow had now accepted that inspectors could be despatched to a suspected site immediately after a challenge but was still opposing the inspectors' right to enter the plant.

A suggestion by Mr Nazarkin that plants could be monitored by sampling air and effluents on their perimeters was made-quate, Mr Hansen said. The Soviet experts would discover by visiting a US storage bunker that these "external configurations" did not exist.

Moscow's motive in pressing for a convention this year was to prevent the US, which stopped making chemical weapons in 1969, from resuming production of modern, binary weapons in the autumn, Mr Hansen said. The US was committed to reaching an agreement ridding humanity of the chemical weapon scourge, but it had to include an effective verification regime.

The idea that the US and Soviet Union should conduct nuclear tests at each other's sites would be raised when bilateral talks on nuclear testing resume in Geneva next month, Mr Hansen said.

In contrast to the Soviet Union which advocates seismic verification of compliance with a test ban, the US believes the most effective means is on-site measurement by the so-called Cortex method.

A nuclear test exchange could prove the US argument that geological formations transmit seismic waves differently and that seismology did not offer sufficient verification, Mr Hansen said.

HIGH-POWERED STUDY GROUP POINTS THE WAY AHEAD

EEC must grow faster, warn economists

BY QUENTIN PEELE IN BRUSSELS

COMPLETING the common market on its own is not enough.

Even with the underpinning of stable exchange rates through the operation of the European Monetary System (EMS), more must be done by the institutions of the EEC to ensure faster economic growth, and a better distribution of benefits through all the member states of the Community.

The ambition of removing all barriers to internal trade, including free capital movement, by 1992, means giving more powers to Brussels, combined with more flexibility in carrying them out.

These are the broad conclusions of an important economic study on the development of the EEC published yesterday.

It calls for:

- Reinforcement of the EMS with much closer co-ordination of monetary policy in individual member states;
- Tougher enforcement of competition policy — with prior notification of major mergers, but less interference in small-scale affairs;
- Increasing use of mutual recognition (of differing national standards) instead of absolute harmonisation to open up internal trade;
- Provision for more flexibility of indirect taxation, while still removing "fiscal frontiers" between member states;
- A common corporate tax system, based on cash-flow instead of income, to encourage the development of European companies;
- Greater equity through the Community budget, by introducing a safeguard mechanism to ease excess budget contributions;
- More financial support for the poorest regions, including cash for general education as well as industrial training — but tied to stricter supervision of economic policies.

The report of a high-powered study group of leading European economists chaired by Mr Tommaso Padoa-Schioppa, deputy director-general of the Bank of Italy, was commissioned by Mr Jacques Delors, the president of the European Commission.

It is intended to provide an important contribution to the current debate on the reform and future financing of the Community, and the development of a coherent framework for macro-economic and monetary policy co-ordination between the member states.

The report is an attempt by economists from outside the main Community institutions to analyse the consequences of the two major decisions of the past two years — the big push to complete the common market by 1992, and the accession of Spain and Portugal to full membership since January 1 1986.

They conclude that while the emphasis hitherto has been on the efficient allocation of resources — through removing barriers to trade and enforcing fair competition — and on stability, through the EMS, more now needs to be done on the redistribution of benefits, and the promotion of faster economic growth.

A major section is devoted to the reinforcement of the monetary system itself, on the grounds that the commitment to free movement of capital by 1992, combined with stable exchange rates, makes much closer co-ordination of monetary policy inevitable.

Mr Tommaso Padoa-Schioppa, deputy director-general of the Bank of Italy and chairman of the study group, is no stranger to the internal workings of the European Community as former director-general for economic and financial affairs in the European Commission. He was closely involved in the original establishment of the EMS, a passion which shows up in the report.

The rapporteur, Mr Michael Emerson, is also an "insider"

as the principal macro-economist in the Commission headquarters, and a major contributor to the Annual Economic Report.

The authors insist, none the less, that they have been given a free hand to criticise and propose solutions at will and have steered clear of the classic negotiated texts which mark most EEC publications.

Professor Mervyn King, of the London School of Economics, was responsible for the detailed recommendations

on a corporate tax system, while the others came from a range of non-EEC institutions, but not from all the member states.

Prof Jean-H.P. Padoa-Schioppa, director of the Netherlands Economic Institute, Prof Lucas Papademos is economic adviser to the Bank of Greece, Prof Alberto Pastor is president of the European National Bank in Barcelona, and Prof Fritz Schärpf is director of the Max Planck Institute in Cologne.

On the other hand, other aspects of opening up trade and competition — such as in transport and telecommunications services — should actually help the peripheral areas, they say.

They argue for tougher "conditionality" on heavy use of the EEC social and regional funds, on a par with the economic conditions laid down for balance of payments loans from the Community institutions.

More flexibility in the imposition of EEC regulations is also

required, they say — pointing to a rapid increase in the number of court cases against individual member states — to accommodate the much greater range of economic conditions in 12 countries than in the original Six.

Although competition policy should be more strictly enforced at Community level, thresholds below which regional aid and state subsidies are allowed should be raised to exclude more marginal cases. Only where subsidies affect cross-border trade should they be challenged, they believe.

The proposal for a single corporate tax system is put forward as part of a package to encourage genuinely cross-border European companies, instead of nationally-based multinationals. Professor Mervyn King, of the London School of Economics, argues in a special appendix that such a tax — based on cash flow instead of income estimates — would harmonise investment incentives on a common basis, and thus achieve fiscal neutrality.

Spanish sue Commission over raids

By Our Brussels Staff

THREE LARGE Spanish chemicals producers have launched legal proceedings against the European Commission alleging intrusion and violation of privacy.

They have lodged separate cases at the European Court of Justice claiming that the Commission overstepped its powers when it raided their factories in January during a search for evidence of possible illicit price fixing in polyethylene and PVC.

This amounts to a fresh legal challenge to the Commission's right to conduct anti-trust inquiries, following the controversial move by Hoechst, one of the eight chemical groups involved in the investigation, to admit the Commission's inspectors to its Frankfurt plant.

The Spanish companies — Dow Chemical Iberica, Empresa Nacional del Petroleo, and Aludisa — claim the Commission broke national privacy laws.

Turkey recalls US envoy as new crisis threatens

BY DAVID BARCHARD IN ANKARA

TURKEY yesterday summoned home its ambassador to the US, Mr Sukru Elekdogan, among signs that Turkish-American relations may be moving towards a new crisis.

Turkey claims it has suspended indefinitely the terms of a new supplementary letter to its Defence and Economic Co-operation agreement with the US, signed in Washington on March 18.

Until now, the US Government has shown little concern over recent Turkish protests all of which are directed at actions by Congress which the US Administration says it does not support.

These include the pruning of US aid to Turkey from an expected \$920m (£581m) this year to \$560m; the making of US aid to Turkey to progress a settlement in Cyprus; and a resolution before Congress about the alleged geno-

cide of Armenians in the Ottoman Empire during World War I — a highly inflammatory subject in Turkey.

Pressure is growing from the Turkish parliament and media on President Kenan Evren to cancel a visit to the US on May 26.

Turkey is generally regarded as a key Nato ally of the US, both because of its strategic position between the Soviet Union and the Middle East, and because of the large number of US military and intelligence-gathering installations on its soil.

It feels that its contribution to the alliance is insufficiently rewarded by US aid. However, Western diplomats here point out that there appears to be little chance of the Turkish emerging victorious from a head-on clash with the US Congress at a time when President Reagan's Administration is at a low ebb.

WHERE ELSE WOULD ONE STAY IN LONDON?

The Hotel Britannia Inter-Continental in Grosvenor Square is one's obvious choice. Offering a haven of tranquillity in the centre of a bustling metropolis we provide the perfect blend of sophisticated modern facilities with our fine traditions of service.

These traditions are upheld in "The Best of Both Worlds", our superb Anglo-American Restaurant, Cocktail Lounge and Café complex. There can only be one London hotel for the truly discerning traveller.

SCUNTHORPE IS STILL ANSWERING THORN ERICSSON'S CALL AFTER 12 SUCCESSFUL YEARS

Thorn-Ericsson first started manufacturing telephone switchboards in Scunthorpe in 1975. But when the call came to start producing AXE Exchange systems for BT, they could have decided to move almost anywhere in Britain.

We're glad to say they chose to remain in Scunthorpe.

The new contract — and others for major companies and procurement agencies — mean that Thorn-Ericsson will be doubling the size of both their factory and their workforce. And it is the workers that persuaded Thorn-Ericsson

that Scunthorpe is the right place to be.

Quite simply, the Scunthorpe people's no nonsense approach and willingness to adapt to new electronic technology meant that Thorn-Ericsson had no worries about meeting future demands.

If you'd like to find out more about how Scunthorpe could answer the call for your expansion plans, contact our I.D.E.A. team. They'll be pleased to give you all the reasons why Scunthorpe is the right move for growing companies.

Makes the difference.

Industry Development & Enterprise Agency, Civic Centre, Scunthorpe, South Humberside, DN16 1AB.

OVERSEAS NEWS

Robert Thomson in Peking reports on a campaign against 'bourgeois liberalism' which challenges artistic freedom

The arts in China turn into a political battlefield

SEVERAL poets have been told that their work will no longer be published. State-run artists' organisations have had sudden changes of leadership. Writers are writing self-criticism and the Culture Minister, Wang Meng, has been under repeated attack in political backroom brawling.

The arts have again become a political battleground in China, and as always, artists and artistic confidence are the victims. The many changes in recent weeks are all part of a Communist Party campaign to drag artists away from ideas about "art for art's sake" and to force them to produce works that "serve socialism".

While the call last year was to "let 100 flowers blossom" the National People's Congress, China's parliament, and the Chinese People's Political Consultative Committee, a senior advisory body, have shown in

past days that unless the flowers blossom in the correct ideological shade this year, they will be plucked.

A few of the more obedient artists have already begun to "serve socialism". A playwright, Shu Qiang, said recently that many of his cultural comrades have "failed to serve the people" and "divorced art and literary work from politics". "All this," he said, "must be changed."

The campaign against "bourgeois liberalism" - which seems to mean Western influence - in the arts has continued to gather momentum, despite warnings by the Premier, Deng Xiaoping, to halt the drive. He has also about his control over the party.

In fact, the campaign now verges on the ridiculous, with daily statements by select artists on the need

to "struggle against bourgeois liberalism". This reflects the new found influence of the former propaganda chief and arch-conservative, Deng Lijun, who engineered a drive against "spiritual pollution" several years ago. Mr Deng has repeatedly criticised the dumped party General Secretary, Hu Yaobang, at recent party meetings for his ideological laxity and desperately wants to be Mr Hu's successor.

Deng Lijun's prodigious nationalism can be seen in the broadening of the drive to "struggle against bourgeois liberalism" to include "struggle against bourgeois liberalism" in the arts, which is exactly what the likes of Deng Lijun are doing.

Thirty-nine literature and art journals were closed in Guangxi province after a regional Communist Party meeting decided that all publishers should apply for new licences. While none of the magazines has attracted leading writers

and some show very poor taste, the closures are obviously a major setback for literary confidence and freedom.

Artists have decided that now is not the time to experiment. One ambitious young painter had planned a performance art festival at a destroyed imperial palace in the Chinese capital. There was to have been new music, and ordinary workers were to have been given the chance to prove their worth as naive artists. Sadly, it is now a case of what might have been.

Changes in key propaganda posts in the past two months have meant that the "serve socialism" cause has been supported by a more conservative Chinese press. The "Guangming Daily", meant to be the most enlightened of the mass circulation papers, talks of the "high tide of bourgeois liberalism" that poisoned

public appreciation of art and literature.

The paper landed "triumphant" return at midnight, a bland 11-episode television series about the Sino-Vietnam border war. The "buddy revolutionary" heroism, without devotion and patriotism" shown in the series has been previously been "ridiculed as dogmatic and habit, feudalistic concepts, slavishness and degeneration," said a Guangming Daily, echoing the sentiments of Deng Lijun.

Many elderly and orthodox Marxist officials in the Chinese leadership, including Deng Xiaoping, tend to not appreciate the finer points of art that does not have a clear, propagandistic message, and are particularly critical of films or literature that portrays the military ambiguously.

"Yellow Earth", one of the most impressive modern Chinese films,

has had limited exposure in China because it suggests that a disillusioned youth committed suicide instead of doing the right thing by the revolution and joining the People's Liberation Army.

The present propaganda drive has tripled the confidence of Chinese artists, who last year were prepared to speak their mind on canvas or in the written word.

They now fear that their past works will be held against them, as happened in the case of two writers, Liu Sinyan and Wang Ruowang, who have been expelled from the party and pilloried in the press.

It has been reported that when told of his expulsion, Wang Ruowang simply said: "Please tell comrade (Deng) Xiaoping that he is increasingly like the last years of Chairman Mao. I am very disappointed in him."

Assad aims to strengthen alliance with Moscow

By David Sedden in Moscow and Andrew Gowers in London

PRESIDENT Hafez al-Assad of Syria yesterday started his first official visit to the Soviet Union for nearly two years against a background of tension between the two allies over Palestinian affairs and renewed Soviet activities in the Middle East.

Mr Assad, Moscow's principal ally in the region, was greeted in the Kremlin by Mr Mikhail Gorbachev, the Soviet leader.

The Syrian leader, who last visited Moscow in June 1985, will also meet Marshal Sergei Sokolov, Defence Minister - an official who has been seen in the past as a key figure in the Soviet Union's policy towards the Middle East.

The visit coincides with a meeting in Algiers of the Palestine National Council, the Palestinian parliament-in-exile, which appears to have delivered a blow to Syrian influence over the Palestine Liberation Organisation and vindicated Soviet efforts to bring together the PLO's warring factions.

Strains have been evident for some time between Damascus and Moscow over Palestinian affairs. Mr Assad, through radical PLO factions based in the Syrian capital, has sought to undermine the position of Mr Yasser Arafat, the organisation's chairman, while the Soviet Union has thrown its weight behind attempts to heal the four-year-old rift within the PLO.

Diplomatic observers believe tensions were exacerbated in the last few months by the Syrian adoption of a "camp war" in which Syrian proxies besieged Palestinian refugees in the Lebanon. Soviet leaders, meanwhile, are likely to use Mr Assad's visit to explore prospects for an international peace conference on the Middle East. The Kremlin, which expects to be involved as one of the five permanent members of the United Nations Security Council, has been adopting a higher profile in sponsoring such a gathering, which is also advocated by the KEC, Jordan and Egypt.

The Soviets have also been pursuing contacts with Israel, causing speculation that the two countries might be about to resume diplomatic relations after a 20-year breach. However, a Foreign Ministry spokesman in Moscow sought to play down these contacts yesterday, saying that they did not "lead to any warming of relations."

Israel eases exchange curbs

By Our Jerusalem Correspondent

THE Israeli Treasury and central bank have announced a series of changes designed to simplify and liberalise foreign currency regulations, which took effect yesterday.

The foreign currency allowance for each Israeli travelling abroad was raised from \$800 to \$1,000. In addition, individuals will be able to hold more dollars in cash and send more foreign currency overseas.

Israeli companies will be able to purchase options abroad to hedge against foreign trade risks.

Tight foreign currency restrictions have been in effect in Israel since 1983, when foreign reserves began reaching dangerously low levels. Today, however, the country's reserves stand at a record \$4.5bn.

The central bank said that another reason for relaxing restrictions was that public inflationary expectations had lessened, thanks to the economic stability achieved over the past few years.

UK rebuked on Pacific N-treaty

By Chris Sherwell in Canberra

AUSTRALIA HAS again voiced disappointment at Britain's refusal to sign the South Pacific Nuclear Free Zone Treaty, saying the decision, made along with the US and France, had a damaging impact.

The concern was expressed by Mr Bill Hayden, the Australian Foreign Minister, at a meeting with Sir Geoffrey Howe, the British Foreign Secretary, and was echoed during Sir Geoffrey's longer-than-expected talks with Mr Bob Hawke, the Prime Minister.

The issue appeared to provide the main note of discord on the first day of Sir Geoffrey's discussions, which aim to re-affirm the strong ties between the two countries.

Accounts of the talks suggested they were otherwise going well, with Australia anxious to hear British views on East-West relations and arms control following Mrs Margaret Thatcher's visit to Moscow, and Britain listening sympathetically to Australian concerns on agricultural subsidies and South Pacific security.

Australia places much weight on the South Pacific treaty, which forbids the use, storage, testing and dumping of nuclear weapons in the region and has been signed by most South Pacific countries. Moscow and Peking have signed its protocols.

Britain says it will abide by the provisions but is concerned about the precedent involved in signing and says perceptions of a nuclear free zone are different in Europe.

Mr Hawke and Mr Hayden have also complained at the US stand.

Damages claim by Greenpeace

By Dai Hayward in Wellington

GREENPEACE is claiming NZ\$5m (£1.25m) from the New Zealand Government for the bombing and sinking of the Greenpeace vessel, Rainbow Warrior, in the New Zealand coast of Auckland in 1985.

Most of the damage was the result of damage to the vessel but NZ\$12m is for aggravated and exemplary damages.

Mr Ted Thomas, QC, said the exemplary damages claim was a recognition that the bombing caused damage to Greenpeace which could not be measured in financial terms.

Mr Thomas will join a team of 10, including two London QCs, in arguing the case before a three-person international arbitration tribunal in Geneva.

Last year the governments of New Zealand and France agreed on the payment by France of NZ\$12m to New Zealand.

Nakasone withdraws sales tax in budget compromise

BY IAN RODGER IN TOKYO

THE Japanese budget for 1987-88 was last night approved by the parliament's lower house after a last-minute compromise which involved withdrawal by the government of a controversial sales tax.

The climbdown is a blow to the prestige of Mr Yasuhiro Nakasone, the Prime Minister, coming at a time when Japan must conduct difficult negotiations with the US and other foreign governments and within months of the scheduled end of an extended term in office.

Mr Nakasone apparently agreed to withdraw the important tax reform because he wants to introduce a series of measures to stimulate the economy prior to his official visit to Washington next week. The budget had to be passed before the measures could be drawn up.

Mr Nakasone was letting it be known earlier this week that he was determined to press on with the sales tax plan, even if it meant continuing with all-night sittings until the budget vote could be taken. However, other ruling Liberal Democratic Party leaders apparently convinced him that he had to back down.

Under the agreement the speaker of the House of Representatives will form a committee from the two sides to attempt to reach an agreement on tax reform. If agreement cannot be reached, the sales tax proposal will be eliminated.

The US and other foreign governments have been putting intense pressure on the Japanese authorities to stimulate domestic demand in the hope that it will encourage imports and reduce the country's huge trade surplus.

Japan's opposition parties had been using delaying tactics in the Diet (parliament) this week to prevent the budget bill from coming to a vote. They said they would not abandon the delaying tactics until the government withdrew its unpopular sales tax bill.

It was not immediately clear last night which side emerged the stronger from this week's clash of wills. The opposition parties claimed total victory but officials of the LDP pointed out that under the compromise agreement between the sides, the need for tax reform was accepted and the imbalance

between direct and indirect taxes in Japan was acknowledged.

The sales tax legislation had been a key component of the Government's overall strategy to bring its economy into better harmony with that of other leading countries. Japan's tax revenue is relatively low by international standards, leaving the Government chronically short of resources.

Also, the system is heavily weighted to income and other direct taxes, which tend to be inflexible, and so reduce the Government's scope for economic management. Taxes on some products, such as whisky, discriminate against foreign goods, but the Government cannot afford to remove them until new taxes are introduced.

The proposal for a permanent sales tax on most goods and services had been widely and strongly attacked by many groups, especially retailers. The opposition parties, and some LDP politicians, supported themselves with the public outcry, with considerable success. The LDP fared badly in the recent local elections, largely because of the sales tax issue.

Blow to India's Tamil initiative

BY JOHN ELLIOTT IN NEW DELHI

ATTEMPTS made this week by the Indian government to find a basis for restarting talks between the Sri Lankan government and the Tamil extremists have been upset by the bomb blast in Colombo on Tuesday and by the subsequent military attacks on Tamil areas of the island.

Tamil representatives of Tamil extremist groups based in the southern Indian city of Madras have been in New Delhi for the past two days for secret hearings with Mr P. Chidambaram, an Indian Minister who has been handling the crisis for Mr Rajiv Gandhi, the Prime Minister.

They include Mr A. Balasingham, spokesman and leading official of the Liberation Tigers of Tamil Eelam, the main extremist group, which has denied responsibility for the recent violence.

The aim has been to try to find a basis for restarting talks which took place last November at the South Asian summit in Singapore concerning the geographical designation of Tamil homelands in the north and east of Sri Lanka.

However, the events of the past few days have clouded the chances of progress.

India is adopting an even-handed approach to the

SRI LANKAN Air Force jets yesterday carried out air strikes for the second time against a base of Tamil extremists called "barbaric forces" in the northern peninsula, killing at least 20 rebels, writes Marvyn de Silva in Colombo.

On Wednesday, 50 people were killed in an attack on five camps of the LTTE (the Tamil Tigers) and another militant group, Eelam. The government has accused the rebels of the bomb explosion at a bus station in Colombo on Tuesday. Police yesterday lowered their estimate of the number killed in that blast

from 150 to 100, with 300 wounded. Tamil sources in Colombo said the civilian casualties in the first air raid were much higher than the figure of 13 given by the government. Hundreds of Tamil families, the sources said, were fleeing the island.

The report reaching Colombo suggested a climate of fear and panic. The New Zealand cricket tour of Sri Lanka has been cancelled because of the violence. The team hotel was less than a mile from the Colombo bus station blast. The team had played only one match of its tour.

The extremists' violence of the past few days has undermined that Indian position, even though the main Tigers' group has disclaimed responsibility.

There is no sign yet of the Indian government being prepared to clamp down on offices and camps of the extremist groups in the southern state of Tamil Nadu.

The recent regional election defeat of Mr Gandhi's Congress I party in the adjacent state of Kerala has weakened his position in Southern India.

Anthony Robinson examines the bitter strike by 18,000 South African transport staff

Afrikaner patronage faces a challenge

AS THE working day ends, at 4 pm on the dot, office workers at the S.A. Transport Services (Sats) headquarters next to Johannesburg's main railway station, poured out of the lifts, homeward bound. They were mainly white, and mostly Afrikaners.

Two security guards, with handcuffs dangling from rear pockets and service revolvers, manned the reception desk. Another large man, with a revolver tucked casually into his belt, sauntered in and made use of the reception telephone. The scene provided an insight into the ethos of one of South Africa's largest employers, which for decades has provided sheltered employment to thousands of formerly underprivileged and poorly-educated blue-collar Afrikaners.

It is both a form of social security for needy whites and a source of government patronage: with an election in the offing, the ruling National Party is bound to resist any threat to such a convenient system.

The challenge has come, however, from 18,000 of

the state-owned corporation's 100,000 black workers, employed mainly in the lower pay and skill grades. They have been responding to what they see as Sats' authoritarian and racist management style with an increasingly bitter and bloody strike.

It began over a relatively trivial issue: a black delivery driver was fined R50 (£25) for not paying in cash received immediately. Hundreds of black workers at the City Deep container terminal, where he worked, walked out in protest, demanding his immediate, unconditional reinstatement.

From the City Deep the dispute spread to 50 other work places as black packers, ticket collectors, truck drivers and others walked off the job.

It spread so fast because all of us over the years have had to pay similar fines and been victimised and ordered about by whites whose only qualification is the colour of their skin. We are tired of being treated like Kaffirs and are fighting for our dignity. It is as simple as that.

A striking City Deep truck driver, who preferred to remain

anonymous, explained. A key part of that fight is for recognition of their union, the S.A. Railways and Harbour Workers Union (SARWHU), which is affiliated to the Congress of South African Trade Unions (Cosatu). Sats management sees Cosatu as an African National Congress/Communist

Party front organisation and refuses to have anything to do with it. Instead, it insists that all negotiations must take place through its in-house union, Blatu, despised as a "sweetheart union" by the strikers.

By traditional standards, the fact that the illegal strike in

a strategic industry did not lead to instant dismissals showed great restraint, management claims. But as the strike degenerated, with the petrol bombing and stoning of trains, this "restraint" became politically embarrassing in the midst of an election campaign focused largely on security issues.

When the bulk of strikers defied an ultimatum on Wednesday to return to work or be sacked, that restraint ended as the security forces were sent in to break the strike. Six strikers were shot dead, all but the 2,000 strikers who heeded the ultimatum have been sacked and scores of Cosatu union officials were detained after security forces surrounded Cosatu House.

The unions are now discussing possible sympathy strikes and other support while Sats has offered to selectively re-employ workers who promptly re-apply for their jobs.

It is difficult to see the strike continuing for much longer under such pressure, but the strength of black determination has been revealed.

DIVIDEND

The final dividend (No. 2) of 456 cents per share in respect of the year ended September 30 1986 was paid on December 12 1986.

SUBSIDIARY COMPANY

At March 31 1987 and at March 31 1986 the company held 50 761 785 shares (equivalent to a 50.58 per cent interest) in Free State Consolidated Gold Mines Limited (Freegold) which were valued as follows:

	At 31.3.87	At 31.3.86	At 30.9.86
Market value	3 143 755	2 129 496	3 114 575
Book value	1 356 142	1 346 331	1 356 142
Appreciation	1 787 613	813 165	1 758 233

The consolidated profit, after taxation, of the company and its share in Freegold for the six months ended March 31 1987 was R180 026 000 (period ended March 31 1986: R202 272 000). Freegold's report for the quarter and six months ended March 31 1987 giving details of its operations is being published today and copies are available from the offices of the transfer secretaries.

For and on behalf of the board
E. P. Gush } Directors
L. Hewitt }

On Thursday, April 23 1987 dividend No. 3 of 400 cents per share, being the interim dividend in respect of the year ending September 30 1987, was declared in South African currency, payable on Friday, June 12 1987 to members registered in the books of the company at the close of business on Friday, May 8 1987, and to persons presenting coupon marked "South Africa" and No. 3 on the side reflecting the share warrant number, detached from share warrants to bearer.

The transfer registers and registers of members will be closed from Saturday, May 9 to Saturday, May 23 1987, both days inclusive, and warrants will be posted from the Johannesburg and United Kingdom offices of the company's transfer secretaries on or about Thursday, June 11 1987. Registered members paid by the United Kingdom Registrars will receive their dividend in United Kingdom currency converted at the rate of exchange applicable on Monday, May 11 1987, less appropriate taxes. Any such members may, however, elect to be paid in South African currency, provided that the request is received at the offices of the transfer secretaries in Johannesburg or in the United Kingdom on or before Friday, May 8 1987.

Holders of share warrants to bearer are notified that the dividend is payable on or after Friday, June 12 1987, upon presentation of coupon marked "South Africa" and No. 3 on the side reflecting the share warrant number at the offices of Barclays National Bank Limited, Stock Exchange Branch, Diagonal Street, Johannesburg, South Africa; Union Bank of Switzerland, Bahnhofstrasse 45, 8022 Zurich, Switzerland; Credit du Nord, 6 and 8 Boulevard Haussmann, 75009 Paris, France; and Banque Bruxelles Lambert, 24 Avenue Marit, 1050 Brussels, Belgium, only. Coupons must be left at least four clear days for examination.

Proceeds of dividends in respect of such coupons may, at the request of the depositors, be converted through an authorised dealer in exchange in the Republic of South Africa into any currency. The effective rate of exchange for conversion into any such currency will be that prevailing at the time the proceeds of the dividends are deposited with the authorised dealer in exchange.

The effective rate of non-resident shareholders' tax is 15 per cent.

The dividend is payable subject to conditions which can be inspected at the Head and London offices of the company and also at the offices of the company's transfer secretaries in Johannesburg and the United Kingdom.

US physicists throw doubt on SDI research

BY LIONEL BARBER IN WASHINGTON

THE US Strategic Defence Initiative, the partially space-based defence against Soviet ballistic missiles known as Star Wars, needs at least ten more years of research before a decision can be made on its effectiveness, a report by top American physicists said yesterday.

The doubts about SDI expressed by a committee of the American Physical Society challenge the more optimistic estimates of a rudimentary defence system to be deployed by the early 1990s or sooner.

The report comes just before the Administration is to reveal its interpretation of whether extensive testing and development of SDI defence systems are permitted under the 1972 anti-ballistic missile treaty. The report is also a challenge to the present laser technologies and an effective missile defence are likely to encourage SDI critics to press for a delay in scrapping the ABM treaty.

The panel, which included Nobel Prize winners among its civilian and military scientists, produced a 424-page report which draws on classified briefings by the Pentagon. It was completed last September after 18 months but was then subject to scrutiny by Defence Department officials on security grounds.

Progress had been made in laser and particle technologies. "Significant gaps" remained in the scientific and engineering understanding of many issues associated with the development of directed energy weapons.

The report said: "Even in the best of circumstances, a decade or more of intensive research would be needed before an informed decision about the potential effectiveness and survivability of the defence system could be made."

The Strategic Defence Initiative Organisation—the Pentagon office which manages the Star Wars programme—said: "We find the conclusions to be subjective and unduly pessimistic about our capability for a full-scale deployment decision in the 1990s."

A spokesman added that recent breakthroughs have brought some of the lasers, especially the free-electron laser, closer to the weapons stage.

Congress is likely to trim President Reagan's request for \$5.2bn (£3.3bn) of funds for SDI research in the fiscal year 1988, starting in October.

Brazil cuts credit costs for hard-pressed sectors

BY IVO DAWNEY IN RIO DE JANEIRO

GOVERNMENT measures to reduce the cost of credit for Brazil's hard-pressed states and municipalities, small to medium-sized businesses and farmers, met a mixed response yesterday.

Several beneficiaries of the new regulations welcomed the moves, but some bankers believe the complexity of calculating interest rate charges will be almost insurmountable.

The new rules, announced late on Wednesday, come as the part of broad programme of economic adjustment. Further changes—including the systematic lowering or removal of subsidies and an increase in state industry tariffs—are likely soon.

The aim of the measures this week is to ease the impact of interest rates, now ranging from an annualised 500 per cent for blue chip borrowers, to as much as 1,000 per cent for poorer risks.

Among the measures are:

- Capping the spreads chargeable by banks, limited to 4 per cent a year for large lenders and 5 per cent for others.
- Authorisation for states and municipalities to borrow up to 25 per cent of their anticipated

revenues from local sales taxes, at rates held to 13 per cent above that of inflation.

- Creation of a \$50m credit fund to allow the refinancing over three years of debts held by companies with sales worth less than the equivalent of \$1.5m (£920,000) last year.
- Similar refinancing measures for farmers over four years for farmers at a cost to the government of about 300m.

In addition, the government is to set up a special commission to look into state and municipal debts.

With the interest rate measures, it was revealed that the government intends to announce the abolition of its much criticised wheat subsidy within the next few days.

Despite this, leaders of the agricultural sector welcomed the agricultural package yesterday, claiming that the credit provisions will ensure that the harvest next year will not be cut through lack of investment.

Bankers are understood to be less enthusiastic about the attempt to cap spreads on loans. "Funding costs are changing daily. How are you going to monitor 100 banks?" one economist asked.

Peru oil strike 'illegal'

THE PERUVIAN Government has sent troops to guard petroleum installations following an illegal strike against the state oil company Petroperu, AFP-AP reports from Lima.

The anti-strike order gives the company the right to sack workers if they do not return to work.

About half of Petroperu's 7,000 unionised workers went on strike on Monday, after pay talks broke down. About 2,000 more unionised workers joined the strike on Wednesday, according to Petroperu.

The strike involves production, refining and export operations. Petroperu is the main oil producer in Peru, refining about 180,000 barrels daily, and sole exporter, shipping out 100,000 barrels daily.

Shorter tours for Marines

THE Marine Corps is to reduce the length of tours of duty for Marines posted as guards at US diplomatic missions in 14 foreign cities, AP reports from Washington.

Mr Robert Sims, the Pentagon's chief spokesman, said the duty assignments for Marine guards assigned to the 14 cities would be reduced immediately from the standard 15 months to one year. Most of the cities are in communist countries.

The decision comes after a review of procedures that followed the arrests of three former Marine guards at the US Embassy in Moscow and at the consulate in Leningrad.

Mr Sims said officials believed a shorter tour for guards would reduce the threat of them being seduced or misled by hostile intelligence agents.

He said the shortened duty assignments would apply to the US Embassy in Moscow and the US consulate in Leningrad, as well as to the embassies in the capitals of Yugoslavia, East Germany, Hungary, Czechoslovakia, Bulgaria, Poland, Yugoslavia, Lebanon, Afghanistan, China, Cuba and Nicaragua.

The spokesman, discussing the espionage scandal at a Pentagon briefing, dismissed reports that military prosecutors had offered immunity to one of the Marine guards in order to buttress the case against another guard.

Canada bans tobacco advertising

By Bernard Simon in Toronto

TOBACCO advertising is to be banned in Canada as part of a stringent package of anti-smoking measures announced by the Federal Government.

Mr Jake Epp, Health and Welfare Minister, said that the advertising ban, which will include electronic and print media, billboards, in-store signs, coupons and promotional competitions, will be phased in by the beginning of 1988.

The Government also plans to ban all smoking in civil service offices by January 1989. As a first step, all departments are being asked to restrict smoking to specially designated areas.

Blunter health warnings will be required on cigarette packs, covering at least 17.5 per cent of the pack's surface.

Canadian tobacco companies have expected tougher anti-smoking measures for some time, and have already begun adjusting their marketing strategies. Rothmans of Pall Mall has spent \$50m expanding its sales force by 100 people, and plans to give greater attention to retail distribution outlets and its promotion efforts.

Reflecting the low profile preferred by the tobacco industry, Mr Patrick Fennell, Rothmans' chief executive, said before the advertising ban was announced that "We have to do our work on a one-to-one basis. In public, we'll lose every time."

Organisers of Canada's leading international tennis and golf championships, which are sponsored by tobacco companies, said yesterday that the new measures jeopardise their events.

Stewart Fleming assesses fears over a lack of leadership in the US

Slackness in the economic muscle

WHEN PRESIDENT Ronald Reagan's political fortunes nosedived last autumn, fears that the US was facing two years of political paralysis, until a new president had taken office, swept through Washington.

It would be tempting to jump to the conclusion today that those concerns were exaggerated. A new White House staff is installed, the president has made a couple of at least competent public appearances and the arms control lifebelt thrown to him by Mikhail Gorbachev, the Soviet leader, has been seized with the alacrity one would expect of a drowning man.

But there is little evidence to suggest that arms control, at least what some White House officials are referring to as "defence II," is capturing the imagination of the US people and providing the president with an agenda that would allow him to coast through the Congressional public hearings next month on the Iran arms sale affair.

On the contrary: while the White House has been occupied with its liaisons with the Kremlin, and with Soviet liaisons with a group of anxious Marines, public concern has been shifting towards the darkening economic outlook.

The perception that the improvement in US military security during the Reagan years has been purchased at the cost of weakening the economic security, has been intensified by the spotlight the White House itself has thrown on the latter by its ill-judged assault on Japanese trading practices in the international semi-conductor market.

That episode, which sent the dollar plunging and politically sensitive home loan interest rates soaring, has alerted Washington, as well as Wall Street, to the underlying fragility of the US economic expansion and

to the extent to which US prosperity and financial stability hinges on the behaviour of what the British used to refer to as the "gnomes of Zurich," but could be more appropriately called nowadays "the gnomes of Nippon."

The rise—superficially strong—in the growth of first-quarter real gross national product, announced yesterday, will do nothing to provide long-term reassurance. Private economists had already identified a first-quarter upswing in inventories as likely to give the GNP data a lift, which would be augmented by an improvement in

the trade picture which few expect to be repeated on anything like this scale in the rest of the year.

The first back-to-back quarterly decline in consumer spending since 1945, which has not apparently coincided with a recession, had also been anticipated. Economists are continuing to argue over whether this is an aberration related to arithmetic patterns of automobile purchases, or the start of a trend that signifies the onset of recession.

The latter interpretation represents the minority view. However, it will gain adherents if recent rises in long-term interest rates are reversed and rising inflation erodes modest real income gains and so threatens to undermine consumer spending.

The majority still sees a modest consumer recovery, but capital spending and a steady, if slow, improvement in the trade deficit which will allow GNP growth to limp through the year at about 2.5 per cent to 3 per cent.

It is not a reassuring outlook, however, because most of the risks are seen to be on the downside.

These hinge primarily on the vulnerability of the economy to instability in the US and Japanese financial markets, in a period of rising US inflation, and to the manifest lack of leadership from Washington's policymakers. One US economist said this week: "It looks like Washington is going to saddle and let Wall Street burn."

Decisive economic policy leadership from the main industrial countries is one thing which would allow Wall

Street's financial markets to view the upsurge in inflation taking place this year with less apprehension. Consumer prices in the US, in the opening months of the year, have been running at annual rates of about 5 per cent, approaching a level beyond which higher inflation becomes intolerable.

Given the way import prices are behaving, a renewed plunge in the dollar could quickly push inflation through that level. What is being done to ensure that does not happen?

Mr James Baker, the US Treasury Secretary, has sharpened his rhetoric in defence of the dollar and given the Federal Reserve Board a broader remit to intervene, with other central banks, to defend the currency.

Mr Paul Volcker, the Fed chairman, has not resisted a rise in short-term interest rates and the Fed is also talking tough on inflation. Japan and West Germany can see that, in extremis, a cut in their short-term interest rates is preferable to a rise in US dollar rates.

But the political commitment

from the industrialised countries to work together to head off an economic catastrophe—which they have just been reminded could be triggered by something as inconsequential in practical terms as \$300m worth of retaliatory tariffs—is nowhere to be seen.

In the US, the alien voices on the Right continue to inveigh against a political compromise on the budget deficit. They are now divided on the wisdom of re-appointing Mr Volcker, the strongest advocate of tackling the budget deficit, to a third term.

But at the White House and on Capitol Hill, disension reigns. Mr Reagan has yet to be persuaded that the budget deficit needs to be addressed, even though some Congressional experts fear the 1987 deficit will be close to \$180bn and that, in 1988, it will start to rise again, just when a deciding trade deficit will call for more capital to be generated domestically and less sucked in from abroad.

Meanwhile Democrats and Republicans in Congress are failing to find a bipartisan consensus on fiscal priorities—a failure manifested by the fact that the Senate Budget Committee drew up four budget resolutions which identified fiscal priorities.

One does not have to be persuaded of the economic logic behind, say, Mr Volcker's calls to cut the budget deficit. The political case alone is persuasive.

It is, however, the price that powerful allies (and suppliers of capital) are demanding to participate in the co-operative efforts to try to stabilise the world economy and diminish the prospect that, with every day that passes, the US comes closer to the downturn in the trade cycle which will carry a resurgence in the federal budget deficit.

Argentina reviews price and wage freeze

By Tim Cooney in Buenos Aires

THE Argentine Government is reviewing its price and wage freeze, introduced at the end of February.

Although the military crisis has been the main focus of government attention during the past week, Economy Ministry officials have been meeting union and business leaders to continue efforts aimed to create a social contract. The idea to forge agreements on medium-term economic policy, so as to end the wave of strikes which has plagued the economy.

According to interviews with union and business leaders, published here yesterday, the government's efforts have hit problems because of the freeze, and it is thought that a signal to relax the freeze may be given soon.

When the prices and incomes policy was reintroduced in February, it was announced that no new wage or price increases would be allowed until the end of June.

President Raul Alfonsín met his new labour minister on Wednesday, however, to discuss union wage demands, and the President yesterday cancelled all other appointments to prepare his speech for the opening of the new session of Congress on May 1.

The two key themes of his speech are expected to outline his economic and human rights policies in the wake of the Easter rebellion by disgruntled units of the army.

The defence ministry was signalling yesterday the reorganisation of the army high command. So far, half of the army generals on the active list have been retired.

Psion PC-Four.

Very serious software.

Very silly price. £69.

(exc VAT)

Psion PC-Four. A word processor, spreadsheet, database and graphics designer. All well tried and trusted. All four £69 (exc VAT).

If you've ever dreamed of owning a suite of key programs for your PC without having to dig deep into the pocket, here's the eye-opener.

PC-Four gives you four powerful, feature-packed programs (plus a tutor for each, for good measure), all for the price you'd expect to pay for just one of them.

They're not 'pruned down' versions of other programs, either. They're all well-proven and highly rated. What's more, you can exchange data between the four programs (or with other programs, for that matter) so you can integrate your work. And they're all extremely easy to use, with help screens sensibly related to the current operation available at all times.

You might think, at such a low price, that the programs don't have all the features that you'd expect or want. You'd be wrong.

Take PC-Quill. 'Which Computer' called it "the best general purpose word processor on the market." With good reason. It has full editing, text and page formatting facilities, automatic page numbering and word count, headers, footers, glossaries and so on. It incorporates mail merge from the keyboard or saved files. And the display reflects the print-out—with type emphases. So you can see what you're getting.

Then there's PC-Archive. This powerful database can handle a number of huge files (up to 64k records each) at a time. It can be used direct from the keyboard, or through its comprehensive interactive programming language—which is structured so that it can be extended. And it has a built-in 'forms' designer to format the screen display and print-out. "Its degree of usefulness is extraordinary," said PC User. We're not surprised.

It's the same story with the graphics creator, PC-Easel. This gives a wide choice of 3D, line and pie chart displays with interactive entry and design. Data can be entered direct or from a saved file and manipulated by formulae, or it can be created by manipulation of existing data. It provides user positioned vertical and horizontal annotations, keys and labels, and automatic scaling of the axes. And it allows multiple representations on one display. Micro Decision referred to it as "an extremely flexible graphics package".

On top of all this, remember, there is a tutorial disk, to show you how to use the more important elements of each program. And of course, there is a comprehensive manual.

PC-Four is designed for all IBM* PC compatibles, including the new low priced clones. Now you know what it does and what it runs on, take another look at the price. Twice.

HIGHLIGHTS FROM THE 1986 ANNUAL REPORT 157th FINANCIAL YEAR

On March 31, 1987 the Annual General Meeting approved the balance sheet of the year ended 31/12/86 showing the following results: (Lit. bn.)

Total Assets	3,906
Deposits from customers	2,173
Gross operating profit	127
Net profit	22
Capital accounts after distribution of profit	239

• Gross dividend applicable to each saving share Lit. 12,000 •

WORLD TRADE NEWS

Nancy Dunne reports on the latest twist in Washington - Tokyo links
Trade debate at time of high tension

IF THE flow of goods between the US and Japan was as evenly balanced as the two-way traffic in politicians trying to ease tensions, then there would be no need for next week's debate over new trade legislation in the US House of Representatives.

Instead, the stark reality is that a Trade Bill will be debated at a time of high tension in the Washington-Tokyo relationship, coinciding with the US visit of Mr Yasuhiro Nakasone, the Japanese Prime Minister.

Most of the legislation has already been worked out in committees, where strenuous efforts were made to keep it free of blatant protectionism. The big question remaining is how the Democrats will resolve their differences over an amendment to be proposed by the US Congressman in the running for the Democratic presidential nomination, Mr Richard Gephardt.

Mr Gephardt has made a tough stance the cornerstone of his fledgling presidential campaign, betting there will be little improvement in the \$170bn (\$104bn) trade deficit. He denies that his measure is protectionist and argues with some reason, that the White House labels most Congressional initiatives protectionist. "I maintain that it is promoting a policy of 'consistency' which is now lacking."

In fact, the candidate says, it is the Reagan Administration, with its free-trade rhetoric, which has sinned the most on protectionism. He cites estimates that American restrictions have risen from 11-12 per cent

Mr Yasuhiro Nakasone

Mr Richard Gephardt

on all internationally traded goods in 1981 to about 20-25 per cent now.

The Democratic leadership last week was trying to resolve divisions over the Gephardt proposals. The measure has undergone several transformations since it was approved last year by the House before dying in the Senate.

In its original form it required the Administration to negotiate, or to take unilateral action against, those countries which have demonstrated "a traditional pattern of unfair trade practices." Surpluses would have to be reduced by 10 per cent a year over a four-year period.

This mechanistic approach to reducing the trade deficit, while not differing much from

the indecisive bludgeon of the Gramm-Rudman Budget Reduction Act, is anathema to the White House.

The President may well veto any legislation which includes the Gephardt proposal. Mr Dan Rostenkowski, chairman of the House Ways and Means Committee, supported a weakened version of the measure in the committee.

It would order the President to negotiate an end to "unjustified, unreasonable or discriminatory" trade practices. It would also require a 75 per cent cut in the US trade deficit with Japan, and a 50 per cent cut in the trade deficit with other countries.

Seven countries now fit this category: Japan, South Korea, Brazil, Taiwan, Hong Kong, West Germany and Italy.

Whether or not they are guilty of unfair trade practices would be determined by the US Trade Representative 15 days after the International Trade Commission designates the countries with "excessive trade surpluses."

The Administration would be given six months to negotiate an agreement with the "surplus" countries to eliminate the discriminatory trade practices. In the absence of an agreement, the President would be required to retaliate against the "burden on US commerce" on a dollar-for-dollar basis.

Mr Gephardt's amendment would come into play in the second year of the Trade Bill. Those "surplus" countries which have not reformed their trade practices would be subject to a 10 per cent reduction in the US exports each year until 1992. The reduction could be negotiated or imposed unilaterally through quotas or tariffs.

However, all these onerous measures would be subject to a single trade law. It is claimed to sharpen, but it will shine the spotlight next week on "the Gephardt" and give some sorely needed attention to a little-known presidential candidate, whose candidacy is regarded with pride by his House colleagues.

This tortuous proposal may in the end prove to be as toothless as the trade law. It is claimed to sharpen, but it will shine the spotlight next week on "the Gephardt" and give some sorely needed attention to a little-known presidential candidate, whose candidacy is regarded with pride by his House colleagues.

Seven countries now fit this category: Japan, South Korea, Brazil, Taiwan, Hong Kong, West Germany and Italy.

Japan 'has electronics plans for UK soon'

By Carla Rapoport in Tokyo

TWO JAPANESE electronics-related companies are planning to announce manufacturing investments in the UK shortly, according to Mr Giles Shaw, Britain's Minister of State for Industry.

After talks this week with potential Japanese investors in the UK, Mr Shaw said that the high level of trade tensions between Japan and the UK did not seem to have affected investor sentiment in Japan.

He was unable to give details of the two companies' investments, but said they were in the final stages of investment appraisal. Mr Shaw also met officials of Honda, which is at present working with Austin Rover on the joint development of a new car to be produced in the UK. He said a production agreement on the new car could be signed by the end of this month.

On the current row between Japan and the UK over access to the domestic financial and telecommunications markets, Mr Shaw said the latest had not created any serious doubts on the part of potential investors in the UK. "I don't think it affects their investment decisions at all," he stated.

Japanese investment in the United Kingdom is now worth about \$2.2bn, with Japanese companies employing more than 17,000 people in the UK.

On the controversial issue of an EEC proposal to extend anti-dumping duties to components of these products produced by Japanese companies in Europe, Mr Shaw said that companies were not considering cancelling their investment plans because of the proposal.

Japanese industry associations and Government officials have strongly warned that the proposal, if passed, would seriously damage inward investment in Europe by Japanese concerns.

The companies are worried about actions which could lead to trade wars. But the issues currently under discussion could not affect Japan's welcome in the UK, Mr Shaw added.

GM unit sets up telecom services centre in Peking

BY DAVID THOMAS

ELECTRONIC Data Systems (EDS), the computer services subsidiary of General Motors of the US, is setting up a computer and telecommunications services centre in Peking, which could play an important role in China's drive to modernise its economy.

The centre, which EDS says is the first of its kind in China, will provide computer services for Chinese organisations in the Peking area. It will also act as a hub for foreign multinationals wishing to send data traffic in and out of Peking.

EDS, which had worldwide sales of \$4.5bn (\$2.7bn) last year, believes the deal is a breakthrough in its strategy of generating more business outside the US.

EDS has signed a 30-year agreement to set up a joint venture with the Commission of Science and Technology of the Peking Municipal Government. EDS, which will have management control of the

venture, will hold 51 per cent, with China holding the rest.

The two partners will each be investing over \$5m in a data processing centre in Peking, which should be operating before the end of the year.

Services offered through the centre will include systems development, educational and consultancy services, and computer operations.

Initial users of the centre are likely to include government, educational, and commercial organisations, as well as national banks, but it will also be open to foreign companies. These organisations will be able to use the centre both to transmit their data traffic and to train their Chinese staff in computing.

Li Yu-Chang, chairman of the Peking technology commission, said: "The joint venture will develop information management systems for customers in industries such as communications, aviation, energy, oil and gas, shipbuilding, iron

and steel, machinery, medicine and tourism."

He added that it would also develop computer-aided design and manufacturing systems for manufacturing enterprises.

The centre will use the packet switching network which the Chinese are building in Peking.

EDS, which is also considering setting up an operation in Hong Kong, believes the Peking deal will place it in a good position to win similar business in other Chinese regions.

William Dawkins adds from Brussels: Banque Bruxelles Lambert, Belgium's second largest banking and securities group, yesterday launched a computerised business information service to alert domestic companies to trade opportunities in more than 100 countries.

London-based Tradalink, the service will provide Belgian companies with automated information on business opportunities.

Eximbank, Turkey loans move

BY NANCY DUNNE IN WASHINGTON

THE US Export-Import Bank (Eximbank) and the Turkish Government are to establish an innovative \$100m (\$82.5m) medium-term lending facility with financing to be provided by five big US banks.

The US banks—Chase Manhattan, Citibank, Irving Trust, Manufacturers Hanover and Bankers Trust—have set up a consortium and will sell off part of the loans to other US banks. They are also expected to provide a companion facility of

\$70m at their own risk.

Eximbank will guarantee 85 per cent of the \$100m credit line, and the Turkish Government, which will lend the money to its own commercial banks, will take the exchange rate risk.

Eximbank and the Turkish Government will set up a fund, taking money from several US banks and sending it to Turkish buyers of US capital goods and services, an

Eximbank loan officer said.

The Turkish credit lines were the kind of innovative financing schemes the lending agency would be using in its bid to become more competitive with other export credit agencies, he added.

The facility will finance deals ranging from \$200,000 to \$10m. Loans are to be repaid in 10 semi-annual instalments, with interest at a floating rate over the London interbank offered rate (Libor).

UK exports to Egypt fall £100m

By Tony Walker in Cairo

BRITISH exports to Egypt fell last year by £100m to £271m, reflecting depressed trading conditions and a deepening recession in the country.

Egyptian exports to the UK more than doubled, however, to £222m as a result of a sharp increase in oil shipments.

Egypt's trade deficit with the UK dropped from £300m in 1985 to £53m last year. Early indications are that there will be a further decline in UK exports to Egypt in 1987. Figures for January 1987, however, were well down on the same month last year.

Foreign traders are reporting a difficult first quarter in Egypt and they expect this to continue through the middle of the year, pending an agreement between the Egyptian Government and the International Monetary Fund (IMF) on an economic reform programme.

An IMF agreement, expected by June, would clear the way for a rescheduling of Egypt's Government-guaranteed foreign debt, which totals about \$12bn (\$7.5bn). Foreign commercial attaches report that negotiations on new projects are being held up while loan agreements with the World Bank and IMF are finalised.

UK companies, meanwhile, are slimming down their operations in Egypt. Midland Bank closed its representative office last year. Lloyd's Bank this year shut its Alexandria and Cairo city branches, leaving it with its main Zamelek branch.

Higgs and Hill, the UK construction company, is closing its Cairo headquarters to cut overheads, but is retaining a permanent presence at a construction site for a new hospital in the suburb of Giza near the Pyramids.

Many foreign companies have been reviewing costs and benefits of remaining in Egypt in the present difficult business climate. Foreign banks authorised to deal only in foreign currency have seen in some cases a reduction in their business of up to 50 per cent.

UAE airline signs deal with Airbus

EMIRATES, the international airline of the United Arab Emirates, has signed a contract with Airbus Industrie to buy one long-range A300-600R aircraft and has taken an option for a second, Reuters reports from Toulouse.

Emirates is Airbus' first Middle East customer for this aircraft, Airbus said. The aircraft, which will seat 270 passengers and be powered by General Electric CF6-80C2 engines, will be delivered in November, 1988.

Emirates already operates an Airbus A300B4 in its fleet, and last October ordered two A310-300 aircraft.

De Clercq threatens Japanese sanctions

BY CARLA RAPOPORT

MR WILLY DE CLERCQ, EEC Commissioner for External Affairs, warned Japan yesterday that the Community could take retaliatory trade sanctions against Japan if the country's huge trade imbalance with Europe was not corrected.

Mr de Clercq told Mr Tetsuji Kurumaru, Japan's Foreign Minister, that the EEC had had "enough unfulfilled declarations" and promises by the Japanese Government and required concrete steps to correct the trade imbalance

between Japan and Europe. "I must inform you of this so that you are not surprised by measures that might yet be taken," Mr de Clercq told Mr Kurumaru.

Mr de Clercq also told Japan that the EEC regarded the US-Japan semiconductor trade agreement as "illegal" under the General Agreement on Trade and Tariffs. At the same time, he said Japan's failure to live up to the agreement was also "illegal."

The European Community,

Mr de Clercq went on, did not wish to be a victim of this "illegal" trade war. If Japanese goods hit by the sanctions were diverted to Europe, the Community would take "the necessary measures" to stop them.

The Commission has already sent a preparatory proposal along these lines to the Council of Ministers. AP reports from Tokyo: Japan's Foreign Minister, Mr Yasuhiro Nakasone, said yesterday that US penalty tariffs on

selected Japanese products imposed last week in a dispute over semiconductor trade were regrettable, but may have provided a good lesson to both countries, according to a Foreign Ministry official.

Mr Nakasone was responding to Mr Clayton Fester, US Trade Representative, who had told the Prime Minister that his office had been inundated with phone calls from Congressmen asking that certain Japanese goods be excluded from the duties.

DAI-ICHI KANGYO BANK

DKB ECONOMIC REPORT

April 1987: Vol. 16, No. 4

Effective policy required for stimulating domestic demand

An agreement for stabilizing exchange rates was reached among nations participating in the G6 and G7 meetings in Paris, February 21 and 22. That agreement was based on the common recognition that further weakening of the dollar would not only be detrimental to the US, but would cause serious damage to the domestic economies of Japan and Germany and eventually to the world economy.

During the meetings, each participating nation clarified its policy goal and pledged to make every effort to ensure the success of the agreement. Japan promised to implement fiscal and financial policies that would help boost domestic demand and reduce the current trade surplus, while the US pledged to reduce its budget deficit. In this context, on February 20, the Bank of Japan announced a further reduction of the official discount rate, from 3.0% to 2.5%, effective February 21.

Signs of bottoming out

The manufacturing sector, which previously had displayed

a constant decline, is currently showing noteworthy signs of bottoming out. According to the business outlook diffusion index (D.I.) of major enterprises (rate of "favorable" outlook - "unfavorable" outlook) recorded in the Bank of Japan's "Short-term Economic Outlook Survey, February 1987," there is a minimal level of deterioration in the outlook for manufacturing industries compared with the results of the previous survey in November 1986.

Moreover, the D.I. for business prospects up to June 1987 shows a flattening trend. Two general factors can be seen in support of this trend: 1) the progress in inventory adjustments seems to be strengthening the position of the industries against declining market conditions and deteriorating profits, and 2) the recent stabilization of the yen rate accompanied by the implementation of additional countermeasures to the yen's appreciation by major enterprises, had been encouraging the prospects of a business recovery.

In the non-manufacturing sector, on the other hand, the overall business climate

continues to be favorable, especially in the construction, real estate and service industries.

In general, then, the business climate in Japan is entering a phase of bottoming out, although there is as yet no change in the gloominess of the manufacturing sector. Rapid recovery of the economy in the future will, however, ultimately depend on fiscal expansion. With harsh conditions expected to continue in overseas demand, domestic demand holds the key to a smooth recovery.

Inactive investment
The Bank of Japan's "Short-term Outlook Survey" reveals continuing sluggishness in investments among manufacturing industries. Scheduled capital investments for fiscal 1987 declined 4.8% from the previous year. This trend can be attributed to the large, fundamental gap in demand and supply, current inventory adjustments and the shift of

present and will not function as a stimulant for the future business.

Consumption trends

As for the household sector, there is slight sluggishness in personal consumption, although activity continues in housing investments. In December 1986, real consumption expenses (on a total household basis) dropped 1.8% from the previous December, while the sales growth of large-scale retail outlets remained low at 1.3% in December and 2.6% in January on a year-to-year basis. Behind this trend are: 1) a deteriorating employ-

ment situation, mainly in the manufacturing industries, with the unemployment rate reaching 3% in January for the first time since the start of the survey, and 2) a drop in income growth, reflecting decreases in both overtime pay and the rise in winter bonuses. Since employment conditions are projected to be severe with large-scale personnel rationalization scheduled in shipbuilding, iron and steel, and other industries, high wage growth will not be realized.

Flexible policies

Under these conditions, overall efforts for boosting

Business Outlook Diffusion Index for Major Corporations

COMMERCIAL LAW REPORTS

Digest of cases in Hilary Term

FROM FEBRUARY 13 TO MARCH 18

Mare Rich & Co Ltd v Tormioli Compagnia Naviera SA (FT February 13)

The question in this case was whether non-availability of a discharging berth, due to congestion, was an "unavoidable hindrance" within clause 36 of a charterparty which excepted both parties in the event of "strikes or stoppages and all other unavoidable hindrances which may... prevent discharging..." In upholding an arbitrator's decision that the charterers were not liable for demurrage, Mr Justice Anthony Evans stated that the congestion began during laytime. It was therefore not a case where clause 36 was relied on to exclude liability for the consequences of an event occurring when the charterers were already in breach of contract.

The Gas Fountain (FT February 17)

In refusing to allow an application by the owners of the *Al Berry* to extend the time in which to issue a writ against the owners of the *Gas Fountain* for a collision which occurred between the vessels on January 2, 1982, Mr Justice Sheen stated that although the court had the widest discretion under section 8 of the Maritime Conventions Act 1911 to extend time for issue of a writ, the question was whether the court ought to deprive the defendants of the right of immunity which the Act conferred on them. In the instant case the parties had already agreed to extensions over a period of four years. There was not a single word of explanation for the plaintiff's failure to issue a writ. A court should not extend time in the absence of exceptional circumstances, which nearly always arose as a result of the defendants' conduct.

D & F Estates Ltd and others v The Church Commissioners for England and others (FT February 18)

Wates, which was the main

contractor in the building of a block of flats, subcontracted the plastering work to independent contractors, who failed to use the plaster in accordance with the manufacturers' instructions. The Court of Appeal, overturning a first instance decision that Wates were liable in tort to the plaintiff tenants for expenditure in replastering their flat, held that while there might have been a sufficiently proximate relationship between the builder and a potential tenant in occupation, nonetheless mere proximity was insufficient. In the instant case there were considerations which negated or limited the scope of the duty of care so that it was not just and reasonable to impose liability on Wates for its subcontractors' negligence.

Universal Petroleum Co Ltd v Hamble and Transport Generalist MGN (FT February 28)

In a dispute over a charterparty for the sale of oil, the arbitrator gave a reasoned award in which he found, inter alia, that although the cargo was not in accordance with the contract, nonetheless, the sellers had been "in no way in repudiatory breach." In allowing an appeal by the buyers against an order that the arbitrator state further reasons for his findings, the Court of Appeal stated that section 1 of the Arbitration Act 1979 required the arbitrator to state against an arbitral award where the parties' rights were likely to be substantially affected by the grant. Moreover, although a party could apply for reasons under section 1(3)(b), the court should only allow such an application after the fullest consideration possible to the question whether the award was likely to be granted in all the circumstances of the case.

Al-Fayed v Al-Tajer (FT February 24)

At the time when he was no longer acting as ambassador for the United Arab Emirates in the UK, Mr al-Tajer wrote an inter-departmental memorandum, addressed to the ambassador at the embassy, as well as to the charge d'affaires and to the Ministry of Foreign Affairs in Abu Dhabi, sharply critical of the plaintiff, who issued a writ for libel. The Court of Appeal upheld a first instance decision that publication of the document was the subject of absolute privilege. While a litigant's right to sue for a wrong committed within the jurisdiction ought not to be curtailed, none the less there was an overriding principle that an English court should confine to an absolute minimum any meddling in the affairs of a foreign government.

Regina v HM Treasury, ex parte Daily Mail and General Trust plc (FT February 25)

Upon the Inland Revenue's indication that it would refuse permission to the application of the *Daily Mail and General Trust plc* that it cease to be resident in the UK, the company contended that a serious point of EEC law arose because the Revenue's refusal under section 482 of the Income and Corporation Taxes Act 1970, undermined Article 52 of the treaty which abolished restrictions on the freedom of establishment between nationals of the member states including the right to set up companies. In upholding the company's contention, Mr Justice Macpherson stated that he doubted whether section 482 should be allowed to fetter the voluntary movement of residence of a corporation which wished to take advantage of better fiscal climate in another EEC state. It was appropriate, therefore, that the European Court should be asked to consider the matter.

Allied Arab Bank v Hajjar and others (FT February 27)

In discharging a writ of ne exeat regio against Mr Hajjar, Mr Justice Leggatt stated that the bank's overriding cause of action was for damages for fraudulent conspiracy. To succeed in retaining the writ, the action had to be one in which the defendant would formerly have been liable to arrest at law. However, a debtor was never liable to arrest except for a specific debt whereas the bank was prosecuted

ing its case in damages. Moreover, "prosecution of an action" could not include discovery and a Mareva injunction, which was a remedy in aid of execution.

Re Geers Gross plc (FT March 3)

Geers, which had been concerned about the growth of large holdings in European shares registered in the names of nominee companies, obtained an order under section 216 of the Companies Act 1985 against SMN restricting the transfer of the shares which SMN held to the order of GA. Mr Justice Vinelott said that SMN's undertaking to sell the shares freely on the open market was insufficient to lift the restrictions as the section was not designed only to give a company the power to unmask the true beneficial ownership of shares at the date when notice was given. It might be equally important for Geers to discover whether there had been any concerted attempt to acquire an undisclosed stake at an earlier date.

The Goring (FT March 4)

In a majority judgment, the Court of Appeal held that the maritime law of salvage had never applied to non-tidal waters and should not now be extended. The issue arose when three men in a small ferry boat on the Thames saved a large unpowered passenger vessel as it drifted towards the weir. Mr Justice Sheen had refused to strike out their claim for salvage but on the owners' appeal, Lord Justice May stated that the law of salvage was justified in public policy in the nature of the perils of the sea. On land different circumstances had produced different rules of law. At some point the policy based on the nature of perils at sea ceased to be compelling and the reach of the maritime law of salvage had to end.

The Notes (FT March 18)

Clause 6 of a charterparty on an SIB VOY form exempted the charterers from delay in getting into berth, caused "for any reason whatsoever over which charterers have no control, such delay shall not count as laytime or as... demurrage." Clause 8 also exempted the charterers for delay caused by "strike, lockout... or any other cause of whatsoever nature or kind over which the charterers have no control. Delay was caused by the vessel's discharge because of swell which rendered the sea line unusable. Dismissing the owners' appeal, the House of Lords upheld the conclusion of the judge at first instance and the Court of Appeal that just as delay caused by swell fell within the exception in clause 6, so it also fell within clause 8 as a cause of delay over which the charterers had no control.

CBS Songs Ltd and others v Amstrad Consumer Electronics plc (FT March 11)

In a declaratory action before Whitford J and the Court of Appeal, it was held that Amstrad's advertising of its new tape-to-tape recording machines did not give rise to civil liability under the Copyright Act 1956. However, an amendment was allowed to the plaintiffs' statement of claim for an injunction prohibiting sales that would incite purchasers to commit the offence of infringing copyright under section 21 of the Act. In allowing the defendants' appeal, the Court of Appeal stated that outside the express statutory provision, no persons other than the Attorney General had standing to enforce observance of the criminal law through a civil court. And, as the alleged infringement committed the section 21 offence gave rise to no claims in equity, the amendment was not legally sustainable.

Babcock Fata Ltd v Addison (FT March 13)

In deciding whether a sum paid in lieu of notice was paid pursuant to "section 74 of the Employment Protection (Consolidation) Act 1978 as being 'just and equitable in all the circumstances' upon an unfair dismissal or whether the sum in lieu should be deducted from the net loss of earnings, the Court of Appeal held that an employee could only recover once for wages lost. By making

the payment in lieu the employee had complied with good industrial relations practice and there was no basis under the 1978 Act for an award of the amount of wages over the period of loss in addition to the basic award and wages already paid for the same period.

Miles v Wakefield Metropolitan District Council (FT March 17)

Mr Miles was appointed as superintendent registrar of births, marriages and deaths in Wakefield, by the Wakefield Council, under the Registration Service Act 1953. He refused to conduct weddings on Saturday mornings on instructions from his union, Nalco, and the Council deducted his salary pro rata. In allowing the council's appeal against a decision that he was to be paid in full, the House of Lords stated that the true nature of Mr Miles's salary remuneration for work done and not an honorarium for tenure of office. The terms of his employment were so closely analogous to those of a contract of employment that they ought to be approached in the same way. Thus, where an employee declined to work at all for a particular period, there was no ground on which he could successfully sue for remuneration.

Citibank Trust v Avtorov and another (FT March 18)

In the case of arrears, a legal mortgagee generally had a right to possession of the mortgaged property except where it might appear to the court that "the mortgagee is likely to be able within a reasonable period to pay any sums due" (Administration of Justice Act 1970, section 36). In the instant case Mr and Mrs Avtorov counterclaimed to a possession order, after failing to pay the mortgage. Citibank, on the grounds that the bank had failed to disclose a surveyor's report paid for by Mr Avtorov. In the event, the house he had purchased turned out to be seriously affected by dry rot. In removing a stay on the possession order that it was not to be enforced if the Avtorovs paid the instalments and prosecuted the counterclaim, the Court of Appeal stated that the section 36 discretion could not be exercised as they were unlikely to pay off the arrears in any reasonable period—even assuming that their prospects of success on the counterclaim were good.

This digest will be concluded on Tuesday.

New Leaders. New Spirit. New Solitron.

JOHN J. STOYDUBIAR
Chairman and Chief Executive Officer

NORBERT FUHMANN
Vice Chairman and President

Solitron Devices, Inc., an international high technology semiconductor and microwave components manufacturer, is pleased to report the latest results of operations representing the second full quarter under the direction of its new management team.

- Operating profits for the Fourth Quarter ended February 28, 1987 are up 58% compared to the same quarter last year.
- Earnings per share, including gains from the sale of nonproductive assets, increased 267% for the quarter just ended compared to the same period one year ago.
- Commitments for new orders from major contractors, particularly those in aerospace and defense, have increased significantly during the past five months.
- High technology specialists have been given increased responsibilities and additional sophisticated professionals successfully recruited.
- Improved yields and shortened manufacturing cycles have been achieved from fundamentals put into place by new management.

Results Of Operations For the Fourth Quarter and Fiscal Year Ended February 28, 1987 (Unaudited)

Quarter February 28	1987	1986	Fiscal Year	1987	1986
Sales	\$13,204,000	\$13,298,000	Sales	\$46,512,000	\$50,189,000
Operating profit	1,339,000	847,000	Operating profit	5,132,000	4,126,000
Net income	1,747,000	775,000	Net income	(a) 5,900,000	(b) 3,296,000
Share earnings	.40	.15	Share earnings	.57	.27
Average shares outstanding	4,321,376	5,148,318	Average shares outstanding	4,895,788	4,951,177

(a) Includes provision for taxes of \$819,000, and tax credit of \$680,000, due to amended tax returns for prior years (a net charge of \$139,000).

(b) Includes credit of \$559,000 for anticipated income tax settlement for 1970, and provision for taxes of \$331,000 (a net credit of \$228,000).

Mr. Stoydubiar reported that the Company's previously announced acquisition of all common stock held by the Company's founder, which represented 16.5% of the total outstanding stock, has and will continue to enhance earnings per share. "The acquisition will be the basis for aggressive expansion program for the near future," he said. Commenting on the earlier announced consolidation of all United States operations into South Florida, Mr. Fuhmann said, "the consolidation is on schedule and expected to be completed in August." Also, he mentioned that "the consolidation will result in estimated savings exceeding \$2.5 million per year in operating expenses for the Company."

UK NEWS

Raymond Snoddy on problems facing the Independent

Newspaper cost of success

SIX MONTHS after the launch of Britain's first quality daily newspaper, the Independent, its editor, Raymond Snoddy, is bemoaning the high cost of success.

The Independent may have been voted Newspaper of the Year in Britain and Mr Snoddy has been named editor of the year, but his newspaper has been a deep disappointment.

"We underestimated the difference between displaying and classified advertising and underestimated the number of people we needed to sell classified," he said yesterday. "It's terrible. We are less than half way towards our classified target."

In the classified columns there are now advertisements for more classified staff for the newspaper.

The paper has even been known to reproduce, free, births and marriages which have already appeared in other newspapers in order to get the classified column going. Its inability, so far, to make money from "rites of passage" is a small symptom of the paper's main commercial weakness so far.

"We have established our journalistic credentials, and that was very important and had to come first," says Mr Snoddy, who is at the moment combining the role of editor and chief executive of Newspaper Publishing, the company

which publishes the newspaper.

The latest circulation figures show that in the six months from October to March the Independent had an average daily circulation of 288,000 compared with prospectus forecasts of around 330,000 by February.

Mr Whitman Smith picks off the pluses and the minuses with the sort of objectivity he might bring to writing a leader: circulation will probably show a fall because the paper depends heavily on casual sales and tends to do badly at holiday periods. But profile is "better than expected."

The balance sheet to date shows that at the beginning of this month the Independent drew down the last £1.8m of loan stock out of total start-up funds of £18m, although a £2m overdraft facility has not yet been touched.

In February the paper was losing £600,000 a month, based on 12 month forecasts, which included all expected increases in costs and made no allowances for increases in circulation or display advertising. The figure for March was just over £250,000 and Mr Whitman Smith says the figures will fall well below £300,000 in April.

A 20 per cent cut in variable costs - or £280,000 a month - has been ordered. This has affected everything from messengers to outside contrib-

utors and purchase of pictures.

Because display advertising has met its target and overall costs have been cut, the Independent believes it can reach break-even on a circulation not much higher than 300,000, compared with the prospectus target of 375,000.

Despite its journalistic awards, will the Independent have to return to its backers, which include Prudential Assurance and Legal and General, this autumn for more money?

"I think the chances are we won't ever have to go back to them and that we will use a little of our overdraft and that will tide us over to break even; but I can't be sure - it's half hope and half forecast," Mr Whitman Smith said.

If he has to go back for more money, the Independent's editor says he has to assume that the bankers will continue to back the project.

Mr Whitman Smith is only too aware of dark rumours that the Independent could soon be in financial trouble despite being seen widely as an editorial success.

These, he says, come from the same people who said the paper would never raise its money, never attract staff, never mould its star journalists into a team, nor manage to launch with a print run of 650,000.

Workfare programme ruled out

BY ALAN PIKE, SOCIAL AFFAIRS CORRESPONDENT

THERE IS no basic reason why US-style workfare schemes under which the unemployed have to accept public employment in order to retain benefits - could not be introduced in Britain, a report published yesterday concludes.

The report, by the Employment Research Centre at the independent University of Buckingham, was commissioned two years ago by the Department of Employment. But Lord Young, Employment Secretary, was quick to stress yesterday that the Government had no intention of introducing such a programme.

US experience left no doubt that workfare schemes could be success-

ful although precise measurement of their costs and benefits was elusive, the report said.

It was probably very optimistic to believe that workfare could generate substantial cost savings. But it suggested that there was a role for carrying out experiments.

The economic argument for workfare was that it would reduce unemployment in two ways, the report said. Degrading benefits to those who were unwilling to take part in workfare programmes would encourage employers to offer new low-wage jobs. Meanwhile, the employability of those who took part in workfare would be enhanced by training or work experience.

Calculations of the cost of a workfare system in Britain depended upon assumptions which were subject to a large margin of error. These concerned the number of participants, the level of their remuneration and administrative and supervisory costs.

The report acknowledged that a workfare scheme in Britain would encounter difficulties. Some unemployed people might see it as "a return to the workhouse" and there might not be sufficient suitable work available. Such problems, however, need not be insuperable.

Harder line on young jobless, Page 11

Insurance groups in life market battle

By Nick Bunker

FOURTEEN large British life assurance groups yesterday stepped up the battle for the UK's life industry when they officially launched a £1.5m campaign to defend their estimated 40 per cent market share.

The 14 companies constitute the Campaign for Independent Financial Advice (Camifa), formed in February. It aims to encourage independent life intermediaries to stay independent after next year's full implementation of the Financial Services Act.

Sir Richard Powell, Camifa's chairman, said he would not claim that the campaign was "entirely altruistic." He said, however, that Camifa did not expect any conflict with those life companies which sell via direct sales forces.

The Camifa companies all rely on independent intermediaries to sell the overwhelming bulk of their products. They include the Scottish mutual life offices, as well as Norwich Union, Clerical Medical and General and several large shareholder-owned companies.

Between them, the Camifa companies claim to have a premium income of about £3.5bn, and to control about 30 per cent (£2.5bn) of the life and pensions industry's investment income.

The campaign is a response to fears that new marketing regulations imposed under the Act will lead to a fall in the number of independent intermediaries.

Camifa is also already sending leaflets entitled "A Declaration of Independence" to 40,000 independent intermediaries. This figure is considerably higher than previous estimates that the UK has about 15-20,000 independent life and unit trust intermediaries.

Camifa believes that about 5 per cent of the main body of 40,000 independent intermediaries have so far opted to surrender their autonomy and become agents exclusively tied to individual life offices. About 30 per cent are still undecided, it believes.

Swiss Bank Corporation reveals a closely guarded professional secret:

Even if it works, ask why.

Many of our customers have something in common besides their choice of international bank. They've learned how to learn from their successes, the way everybody else learns from mistakes. The reasons why something goes right are just as important as the reasons why something goes wrong, and may be even more rewarding (and elusive). When nothing succeeds like success, it's because nothing works like work. Incidentally, when our customers keep coming back to us, we do know why. And so do they. We're one of their professional secrets.

Ford UK's pre-tax profits fall

BY JOHN GRIFFITHS

FORD-MOTOR Company's pre-tax profits fell by 32 per cent last year, to £100m from £160m, and the UK company's interest income, mainly on loans to its US parent, again exceeded its operating profit.

The pre-tax figure was made up of a £45m operating profit, down from £88m, and £54m in net interest (£72m).

However, Mr Derek Barron, who succeeded Mr Sam Toy as chairman in the middle of last year, blamed adverse currency movements in part and said the downward pressure on profits had been "significantly offset by cost reductions, efficiency improvements, increasing levels of productivity from British plants and sales strength."

The company had been able to achieve a considerable increase in the number of cars made in Britain, and "if present trends in improved productivity can be maintained we expect to make a further increase in 1987."

Despite Ford's relatively poorer performance last year compared with 1985, it paid a sharply increased dividend of £300m (£100m) to its US parent, only its second in seven years.

But this was more than offset by Ford US, cash-rich after net earnings of \$3.5bn (£520m) last year, repaying nearly \$450m of loans made to it by the British company, reducing outstanding promissory notes from \$218m to \$273m.

The accounts show that Mr Sam Toy, Ford UK's chairman until his retirement until May 31 last year, received £50,544 total emoluments for the five months of last year, less than one third of the £161,561 received by his successor for the remaining seven months.

Export sales totalled £1,091bn, up from 1,035bn. However, for the second consecutive year Ford has declined to put a value on its imports, on the grounds that it is not obliged to do so, and that none of its rivals does. In 1984, it had balance of trade deficit of £501m.

Turnover increased by 8 per cent to £4,374bn, with turnover in the UK setting a record of £2,187bn.

THERE ARE FEW BETTER INVESTMENTS FOR YOU & YOUR STAFF THAN A SUNBED

It is a well-known fact that people who feel good about themselves perform better at work, and there is no greater confidence booster than a deep golden tan.

A sunbed also provides a half-hour or so of relaxation in a warm, comfortable environment and will consequently help reduce stress and improve productivity in busy executives. The provision of a sunbed will demonstrate to staff that you care about their well-being and appearance, and provide you with the means to relax and think clearly for those vital few minutes, away from the pressures of work.

Our company installs over 2000 sunbeds a year in Scandinavian companies who have recognised the benefits of looking after their staff in this manner. All you need to install a sunbed is a 13 amp socket and 3m² of space. The investment will pay for itself in days.

Solana are one of the world's leading manufacturers of top-quality sunbeds. We also supply saunas and a revolutionary range of gymnasium equipment.

For further information, ask your secretary to ring us or clip your business card to this advertisement and send it to:

Tories favour tougher welfare benefit rule for young unemployed

YOUNGSTERS who reject opportunities to continue their education, undertake training or refuse jobs are likely to be deprived of their entitlement to welfare benefits if the Government secures a renewed mandate at the coming general election, Mrs Margaret Thatcher, the Prime Minister, made clear in the House of Commons yesterday.

Amidst noisy protests from the Labour Opposition, Mrs Thatcher announced that the Conservative election manifesto — to be put before the country "very soon" — would include such a proposal.

With a gesture of defiance which won cheers from government supporters, Mrs Thatcher argued that youngsters aged between 16 and 18 who declined opportunities to stay on at school, undertake further education, enter the Youth Training Scheme (YTS) or take other opportunities, should not look to the Government for financial support.

She stressed that any social security benefit they obtained would be financed by "working people," and insisted that youngsters in such circumstances "are not entitled to call upon their neighbours to keep them."

Mr Neil Kinnock, Labour opposition leader, recalled that various studies had been launched into different systems of welfare benefits under government auspices and said that the Prime Minister if she was opposed to any scheme which made payment of full benefit to the unemployed or their families conditional on undertaking compulsory work or training.

Mrs Thatcher replied that "At the moment we have no proposals for compulsory work as a condition for receiving benefit."

With the Labour benches cheering support, Mr Kinnock underlined that the Government's proposals, which would be caused by the Prime Minister's use of the phrase "at the moment."

posal. With a gesture of defiance which won cheers from government supporters, Mrs Thatcher argued that women aged 16 and 18 who declined opportunities to stay on at school, undertake further education, enter the Youth Training Scheme (YTS) or find decent job opportunities, should not look to the Government for financial support. She stressed that any social se-

on undertaking compulsory work or training.

Mrs Thatcher replied that "At the moment we have no proposal for making any work as a condition for receiving benefit."

With the Labour benches cheering support, Mr Kinnock underlined the "widespread concern" which would be caused by the Prime Minister's use of the phrase "at the moment."

CAPITAL EXPENDITURE COMMITMENTS
 Orders placed not outstanding on capital contracts as at March 31, 1967 totalled \$263,341,000.

PRODUCTION
 As a result of a number of incidents of industrial unrest, mainly in the form of faction fighting, at the present time production of oil and gas is being maintained at a level of approximately 100,000 barrels per day.

UK NEWS

Yamazaki jolts machine tool market

Nick Garnett looks at a new entrant to a sector of British industry already suffering from over-capacity and cut-throat competition.

DURING A recent visit to Yamazaki's new machine tool production plant in Worcester, in the West Midlands, Mr Paul Channon, Industry Secretary, described as "amazing" the greenfield project with its automated guided vehicles and computer controlled stacker cranes.

The UK's machine tool makers and some of their European competitors, already engaged in a cut throat sales battle might well share Mr Channon's admiration for Yamazaki's production technology.

But their overriding response to the £35m non-union factory which came on stream two months ago has so far been one of apprehension which for some has bordered on fear. "It is going to be a hell of a jolt to the industry," says one machine tool maker.

It is not difficult to see why. The Japanese company, which received £5.2m in direct government assistance for the project is planning to build 1,200 small-medium and medium-sized computer numerically controlled (CNC) lathes and machine centres a year when Worcester comes into full production, scheduled for spring 1988.

In other words Worcester will be able to produce the equivalent of 80 per cent of the total existing output of UK-made CNC machines with a direct plant workforce of about 180. Output of assembled machines - which the company has promised will soon have 60 per cent local content based on a broad definition including wages and factory operation -

ing costs - is at present running at the rate of 20 machines a month.

Some 65 Japanese, mainly engineers, are on site but this will come down to a "permanent" Japanese presence of nine, including the managing director. Yamazaki has given assurances that it will export 80 per cent of its output, mainly to the rest of Europe.

Even so, Mr Les Pratt, Yamazaki's marketing manager at Worcester, says the Japanese company is aiming to raise its share of UK machine tool sales from its present 15 per cent to between 25 and 30 per cent. Its share of lathes sales is aimed to rise from 10 to more than 20 per cent.

In a market troubled by vast over-capacity and persistent discounting of 15 to 30 per cent below list prices by certain Korean, Taiwanese and Japanese producers, that can only mean a lot of grief for some indigenous UK and European machine tool companies.

"This is certainly going to cause pressure in the European machine tool industry," says Mr Jim Strogopoulos, marketing director at Cincinnati, the US company which has a substantial manufacturing site in Birmingham. "The industry needs less capacity not more."

have been even more hostile. West German producers such as the big lathe maker Gildemeister, which have been in a pitched battle with the Japanese on their home turf, fought tooth and nail to prevent Yamazaki setting up in West Germany.

The UK market for CNC lathes - with machine rounded parts - is about 1800 machines a year and is highly fragmented with more than 180 companies offering products. "Clear market leader, however, is TI Machine Tools with its Chinghill lathes. Because of this, the machine tool industry believes it to be the most vulnerable to the impact of the Worcester plant."

TI, whose new group management in London has indicated privately that it might eventually sell the machine tool business, produces more than half the CNC lathes manufactured in the UK. TI Machine Tools, which took record orders last year of £25m, is planning to introduce a new lathe model in the summer.

The 600 Group, with TS Harrison and Culchaster machines, is a big lathe producer but its main output is of centre lathes costing below £30,000, less than half the price of Yamazaki machines, and with which it is not in direct competition.

Beaver, the expanding Norwich-based company and one of the few recent success stories in UK machine tool building, is on the point of constructing a new lathe-making factory in Peterborough.

About 700 machining centres are sold in the UK. These machines which have become more popular at the expense of conventional milling, drilling and boring equipment machine angular parts. The machining centre has far fewer suppliers than that for lathes. Apart from Yamazaki, the main British-based producers are Bridgeport, Beaver and Wadkin as well as Cincinnati and to a lesser extent, TI.

British-produced machinery centres have increased their share of the UK market in recent years. However, TI closed its plant near Newcastle-upon-Tyne last year to concentrate manufacturing in Coventry and has recently begun assembling Japanese Takisawa machines to give it a vertical machining centre. Cincinnati is also closing its Riggleswade, Bedfordshire, operation to concentrate production in Birmingham. All of these producers compete with Yamazaki somewhere along the line.

However, Bridgeport which has the biggest turnover of any British-based operation from its two facto-

ries is partly protected because its machines have more of a specialist niche with a bias towards milling tasks. Bridgeport makes its own-designed vertical machining centres but its horizontal machines are designed by Yasuda of Japan and made in with largely EEC components.

Wadkin, part of the Robinson Group, makes 10 machines a month and Mr Mike Goodrich, chief executive of machine tool operations, emphasises the individual attention a company like Wadkin can provide to potential customers.

So too does Beaver, but the company is annoyed at Yamazaki's presence. "The real purpose of Yamazaki in Worcester is to be seen as a European builder if more restrictive import curbs are introduced," says Mr Tony Baldwin, Beaver's managing director.

The machine tool market is plagued by merciless pricing. The auctioning figure is usually pointed at the importers of Korean and Taiwanese machines - in particular machines made by Leadwell, the Victor group and Dah Li. Importing companies are under contract to buy a minimum number of machines and are, therefore, under pressure to shift them.

The rise of the yen has forced companies like Kitamura to raise list prices to a level 30 per cent above those of some UK domestic producers but Kitamura products are still said to be underpricing domestic prices after discounting.

Caterpillar talks to potential plant buyer

BY JAMES BUXTON IN EDINBURGH AND CHARLES LEADBEATER IN LONDON

CATERPILLAR, the world's biggest manufacturer of earth-moving equipment, is in talks with a potential purchaser of its tractor plant at Uddingston, near Glasgow, it said yesterday.

The US company ran into a storm of criticism after it announced in mid-January, less than four months after it unveiled a £32m investment programme for Uddingston, that the plant would close within a year. Employees have been occupying the plant despite a court order obtained against them by Caterpillar.

The company said yesterday that the prospective purchaser, which it would not identify, was not in the earthmoving equipment field. The purchaser wanted to start operating in part of the plant from the beginning of next week, the date the company set for a return to work by its employees. The deal therefore appears to be conditional on a swift return to work. Caterpillar

lar would be prepared to make space available at once to the new occupant.

It is thought that the new occupant would take over the whole of the 1.1m square foot plant but would not need the entire 1,200-strong workforce. It is believed that Sir Monty Finiston, the Scot who is a former chairman of British Steel, is closely involved in the project for taking over the plant. He was not available for comment yesterday.

The news of the possible purchaser was welcomed yesterday by Mr Malcolm Rifkind, Scottish Secretary, who said the Government would offer help and financial assistance. It is understood that Scottish Office officials have been in touch with the interested party.

Talks aimed at ending the occupation were continuing last night in Perth, with Amalgamated Engineering Union officials.

Shell chief optimistic on future of North Sea oil

BY LUCY KELLAWAY

THE NORTH SEA is still an attractive oil province despite the effects of the fall in the oil price, Mr Bob Reid, chairman of Shell UK, has said.

Speaking to Scottish businessmen yesterday he warned, however, that the recent recovery in oil prices might be short lived, because of instability among Opec members.

The price rise since the middle of last year may have "done something to restore confidence, but it would be a mistake to believe that what we have been through has been no more than a hiccup," he said.

Nevertheless, he predicted that companies would continue to look for oil in the North Sea, and increasingly apply technology to find cheaper ways of developing it.

He presented a fairly optimistic future for the offshore suppliers, arguing that there would be opportunities for the UK's "first class" industry, both in the North Sea and overseas.

The initial reaction of "alarm and despondency" to the fall in the oil price had been overcome, he said.

On the fiscal regime, Mr Reid gave a muted welcome to the tax changes in this year's budget, but urged the Government to remove the discrimination against new fields in the southern part of the North Sea, which are not entitled to the cross-border relief allowed by more northern fields.

He also called for incremental investment allowances, which would encourage companies to use new techniques to extract more oil out of existing reservoirs.

Evolutionary Processes Leaving Bears Behind

The first polaroid camera was viewed by people as a Christmas toy, and a number of analysts recommended the stock as a safe bet at \$9 before it ran a few years later to \$260, pre-split. Now the same company is evolving into electronic imagery - which Indigo researchers feel will lead it in time into computer optics. Numbers of stocks that nervous investors keep selling during crash scares represent the same sort of evolutionary planning. Indigo technicians make extensive use of leveraged instruments to gear up potential gains in related markets movements, and our current review of the mid-April setback in equities and financial instruments may help you develop a clearer view of a wide-open future. NOTICE OF REDEMPTION To Holders of U.S. \$125,000,000 GMAC Overseas Finance Corporation N.V.

10% Notes due May 27, 1989

Notice is hereby given that pursuant to paragraph 8 of the Notes and Section 4 of the Fiscal and Paying Agent Agreement dated May 17, 1982 between GMAC Overseas Finance Corporation N.V. (the Company) and Chemical Bank, Fiscal and Paying Agent, the Company hereby gives notice of its election to redeem all of its 10% Notes due May 27, 1989. The date fixed for redemption shall be May 18, 1987 and the Notes will be redeemed at the price of 100% of the principal amount thereof together with accrued interest to the date fixed for redemption. After May 18, 1987 the Notes will cease to accrue interest. The Notes will be redeemed upon presentation and surrender together with all appurtenant coupons. If any maturing on and after the date fixed for redemption at the principal office of the Fiscal Agent, Chemical Bank, 55 Water Street in New York City or at the principal offices of Chemical Bank in London, Frankfurt, Paris and Zurich and the principal offices of Banque Paribas in Luxembourg S.A. in Brussels and Banque Generale du Luxembourg S.A. in Luxembourg.

GMAC Overseas Finance Corporation N.V.
Dated: April 17, 1987

To the Holders of COLLATERALIZED MORTGAGE OBLIGATION TRUST SEVENTEEN

Class A-1 Floating Rate Bonds Due 2018

Notice is hereby given that the interest rates applicable to the above bonds for the interest period April 20, 1987 through July 19, 1987, as determined in the Indenture, is 7.5156% per annum.

COLLATERALIZED MORTGAGE OBLIGATION TRUST SEVENTEEN

Bunzl cuts a fine figure

1986 was a remarkable year for Bunzl:

- Turnover increased by 35% and now exceeds £1 billion.
- Pre-tax Profits grew by 52% to £64.8 million - a five-fold increase over 5 years.
- Earnings per share increased by 26% to £1.95p.
- Dividends increased by over 25% to 4.20p per share.
- Bunzl is now firmly established in the FT-SE 100.

To find out more about Bunzl, ask for a copy of our 1986 Report and Accounts and Review of Operations from Donald Latimer, Company Secretary, Bunzl plc, Friendly House, 21-24 Chiswell Street, LONDON EC1Y 4UD (01-606 9986).

Bunzl is a diversified group operating through five divisions worldwide:

- Distribution Division - distributors of paper and plastic disposable products, fine quality papers and building materials;
- Merchandising Division - international traders in pulp, paper and board;
- Transportation Division - express parcel delivery and transport engineering;
- Filtrona Division - specialist manufacturers of cigarette filters, electronic instruments and packaging products; and,
- Industrial Division - manufacturers and converters of specialised paper and plastic products.

Paper, plastics, distribution

FINANCIAL TIMES SURVEY

The M4 motorway, linking London with Wales and the West, remains a highly attractive property

location. It now faces competition from other motorways, notably the M3 and M25, London's orbital road, as William Cochrane reports.

Corridor still in high demand

IT HAS been an intense year for business property in the Western Corridor, particularly along those stretches of the M4 motorway close to London and Heathrow airport.

The M4 is Britain's most mature motorway property location; it has been under attack in recent years from the M3/M25/A300 complex connecting London and South Hampshire; and the attack has intensified in a crescent north and south of Heathrow with the completion of the M25, London's orbital motorway.

The question must be whether the M4's very maturity has limited the ability of locations like Heathrow, Reading and Bracknell to react to events in and around the commercial property market.

Property professionals have noted, for example, a relative lack of "high-tech" accommodation around Heathrow airport. Others are disposed to wonder whether the sheer intensity and quality of demand in this location had something to do with it.

Heathrow, it could be argued, had plenty of demand for hybrid office/industrial property before high-tech was invented as a type. So instead of the 50:50 industrial/office combinations on two floors which

became popular in the 1960s, it hosted the rise of mid-tech — 25 per cent to 30 per cent offices dressing up the front of a building, and good quality industrial at the back.

Bracknell, perhaps, did not have enough of the wide open spaces which high-tech and campus developments really enjoy; at any rate, it got a lot of the tight backland, the pavilion, so-called high-tech development which has given the type a bad name in the past two years. Reading's status as the top Thames Valley commercial centre has been under fire due to out of date and insufficient retailing, and the thought that campus offices on, or near, motorway junction locations might be preferable to the traffic congestion which has afflicted the town at rush hour.

However, local observers say that the Western Corridor is still in high demand as a business location. Reading-based chartered surveyors Campbell Gordon said in March "that demand for commercial and industrial property in the Thames Valley is continuing to run at record levels."

During 1986, they said, 706 companies entered the market with a total space requirement of 20.6m sq ft. In 1985, the

figures were 673 and 17.8m sq ft respectively.

The firm found no evidence in 1986 of a significant slowdown in any sector; the fact, and corollary, that they found no evidence of a rapid increase in the demand for any particular sector may indicate the need for a watching brief.

The survey established that total demand for warehousing in the area continues to increase, and now makes up about one-third (33.3 per cent) of the total. Close to London, agents who want to satisfy that demand are frustrated by lack of development; industrial development indicates land

values of £14m an acre at best, while a good high-tech proposition can double that figure.

The battle for the hearts, minds and — more important — the money of the shopper intensified all along the Corridor. In Bristol, in March last year, the Prudential Assurance initiative in a 650,000 sq ft out of town retail park for Cribbs Causeway, north of the city, was upgraded to a 200m regional shopping centre in partnership with Marks & Spencer.

The plans coincided with a report from 15 pressure groups and other organisations which said that a planning crisis was threatening Northavon, the

planning authority concerned, with greenfield development going ahead at the expense of the inner city.

The "Pru" M & S scheme, called Retail 2000, took in 800,000 sq ft of net retail space alongside 100,000 sq ft of retail warehousing and the components were valued at £75m and £15m respectively. Subsequently, local developer Mr Jack Bayliss, who had already publicised plans for a 1m sq ft gross, £100m scheme on an adjoining site, said that he was processing inquiries for 400,000 sq ft of space.

Last May, meanwhile, ARC Properties announced plans for

a 1m sq ft, £120m shopping scheme on worked-out aggregate land at Wraysbury, Berkshire, very close to Heathrow airport. The building was conceived as looking like a hanging garden, floating in the centre of a lake, and the development would be surrounded by a 205 acre country park and nature reserve.

However, the site was also green belt. And in October, Mr William Waldegrave, Minister for the Environment, told a conference run by chartered surveyors Edward Erdman that the government was planning to restrict development of large shopping centres, especially in

Bournemouth

the green belt.

Mr Waldegrave's plans for dealing with the shoal of out-of-town planning applications left the two Cribbs Causeway proposals effectively called in for ministerial scrutiny on the grounds of their size, and Wraysbury-type projects blocked by the central government's defence of the green belt — which it has reiterated on several occasions since then.

This has given town centres the time to fight back. Plans for redevelopment in and around Bristol's old Broadmead centre could lead to a coherent, revitalised 2m sq ft of shopping in the centre of the city, well parked and with good motorway access.

The same sort of thing could happen in the town centre of Staines, currently favoured as the prospective retail centre for the Heathrow area. These items are dealt with elsewhere in this survey.

With Reading, the retailing question last July was whether London & Edinburgh Trust's decision to change its plans for the Courage Brewery site in the town centre — reflected retail prospects, Reading's traffic jams at peak commuter time, or a prospective change in planning law.

If LET had been anticipating proposed changes in the Use Classes Order — creating a new class of business property which would amalgamate light industrial and office use, and encouraging out of town campus office development — it would be waiting still.

Jan Campbell, senior partner of Campbell Gordon, notes in a current paper, that proposed changes in the Use Classes Order have still to be made effective. The Department of the Environment says that it has been involved in extensive consultation over the changes, which involve all sorts of accommodation apart from the industrial/office hybrids; it has been concerned, it says, with getting the changes right.

As it happens, LET director John Newman thinks that the company's change of plan represents Reading's last chance to take sole position in the Thames Valley retail market. The company acknowledges the traffic congestion in the town centre but says that it is sum-

pling up parking provision by 1,100 spaces. Other professionals note that shopping, in theory, would produce a different traffic pattern.

Pure office demand may be influenced by the fashionable perception that combined research and development, administrative and production functions make more sense than dispersed operations in a number of locations. It may be waiting for campus development to become a more serious proposition, though Mr Campbell thinks that local councils may react if changes in planning law seek to drive a coach and horses through their policies of restraint.

However, what is clear is that high value accommodation in top locations will have its fair share of promoters. Last June Spectra paid nearly £2m an acre, £2m for the 2.19 acre 72K site at the Ring, Bracknell. The site was undeveloped land in the town centre and had planning permission for 98,000 sq ft of office floorspace.

In July, Danny Desmond's rising Bride Hall Development company and PotToI got formal approval from Bracknell district council to develop a 650,000 sq ft business park on 37 acres in the centre of the town's commercial area.

Will the establishment of M3 and M25 markets cut off M4 development somewhere west of Reading? Articles elsewhere in this survey, on the Thames Valley, the West and Wales, deal with this question.

In the east, the gradual exclusion of low value industrial property from high value locations may be a fact of life. It has certainly been accepted across the world, in Silicon Valley and Orange County, California.

Instead, the M4 may continue to hit the headlines with the sheer scale of its international business parks: Stockley, near Heathrow, up to 2.4m sq ft; a Prudential Assurance, 100 acre acquisition near Reading which may produce 1.12m sq ft as the first phase of the Axiom 4 development; and a potential 1.25m sq ft by Sherratt Securities on 65 acres next door.

* Demand 86, a Thames Valley Survey, published in spring 1987, by Campbell Gordon, 45 Queens Road, Reading, Berkshire RG1 4RU.

Property along the M4

A 100,000 sq ft building in the first phase of Stockley's international business park at Heathrow, reported to have been leased as a computer centre for a leading British company

figures were 673 and 17.8m sq ft respectively.

The firm found no evidence in 1986 of a significant slowdown in any sector; the fact, and corollary, that they found no evidence of a rapid increase in the demand for any particular sector may indicate the need for a watching brief.

The survey established that total demand for warehousing in the area continues to increase, and now makes up about one-third (33.3 per cent) of the total. Close to London, agents who want to satisfy that demand are frustrated by lack of development; industrial development indicates land

values of £14m an acre at best, while a good high-tech proposition can double that figure.

The battle for the hearts, minds and — more important — the money of the shopper intensified all along the Corridor. In Bristol, in March last year, the Prudential Assurance initiative in a 650,000 sq ft out of town retail park for Cribbs Causeway, north of the city, was upgraded to a 200m regional shopping centre in partnership with Marks & Spencer.

The plans coincided with a report from 15 pressure groups and other organisations which said that a planning crisis was threatening Northavon, the

Industrial

Doubts on high-tech demand

LAST NOVEMBER a survey of new industrial property in the Thames Valley by Reading-based chartered surveyors Campbell Gordon said that there was no serious over-supply of new industrial property in the region.

In the 18th-month period to June 1986, it estimated, the total take-up was 5.33m sq ft in 268 sales or lettings. In the 18 months to December 1987, it forecast, the total supply in the pipeline would be 6.35m sq ft.

Senior partner Ian Campbell said that the increase in supply was confined to the high office content sector—encapsulated by the trade in the term "high tech".

However, the quality of supply did not necessarily equate with demand, which he estimated at 14.7m sq ft in 1984, 13.9m sq ft for 1985, and expected that the total for 1986 would be higher.

Other comments have been less measured, according to Mr. Quentin Jones, joint managing director of developer Beaconsfield Estates.

"On reading most of the published reports in respect of the industrial market in the mid- and late-1980s," he writes, "it appears that high technology industry is past its heyday. Sheds

are now back in fashion and there will be acres of office-style high tech units remaining unoccupied for years to come."

Mr Jones demurs. "The experience of agents and developers active in the Western Corridor," he says, "presents a far different picture."

He lists a number of letting successes for the genre since 1984 including, last year, two schemes by his own company in Maidenhead, Berkshire, which went to names like Northern Telecom and Commodore at rents reaching £10.50 a sq ft.

He contends that in the past five years, high tech property has come of age; that the growing sector of the economy is information technology; and that an increasing number of commercial organisations are now able to fit into a high tech planning use category owing to their use of computerised facilities.

He says that there is strong demand despite short-term over-supply in some locations; and that the emphasis is the shortage of fund investment during a phase of high tenant demand which, he says, "has resulted in more and more schemes being financed by sophisticated structured finance from banking sources."

Agents Richard Ellis certainly agree on the matter of over-supply, and the nervousness of the institutions. Richard Storey, from the firm's industrial agency side, says that there is dramatic over-supply in Bracknell which has 400,000 sq ft up and ready, while Swindon has a problem of similar scale to deal with.

Stephen Hubbard, a partner on the investment side, believes that developers need a better research base and better statistics on locational supply and take-up. "Developers are losing a lot of money through this," he says, "and funds are still very, very wary of high tech."

Beaconsfield and Ellis are also united in saying that high tech needs image and quality of building and location, ease of access and quality of environment. A good deal of high tech has fulfilled these criteria. Unfortunately, the wave of enthusiasm for this sort of property broke on the back-to-front development process which followed. Developers paid over £1m an acre for land, a price which allowed them no latitude in the rents which they had to charge and, therefore, the sort of property they were able to put up. Others built tin pavilions

cheek by jowl on backland short of prominence, access, parking and environment. The back lots of Bracknell, temporarily famous as the high tech capital of Britain, have been a case in point.

What funds do want, says Mr Hubbard, are quality buildings in quality locations, not poor buildings and/or backland sites. "They want good, brick-built, two- to three-story office blocks with good parking and all the trimmings," he says. "They are not interested in a tin shed called high tech any more."

What they are interested in is the buildings which can be turned into office accommodation when the new Use Classes Order puts office and light industrial accommodation into one new business class.

Meanwhile, Ellis see a complete lack of supply in traditional sheds and they do not see the situation changing overnight. Institutions are reaching to fund sheds and even if they were, land values in the Thames Valley have risen to a point where old fashioned industrial development is uneconomical.

The situation is that development of land for high tech, and the letting of that high tech for over £10 a square foot, allow for a land value of up to £1m an acre after building, funding and marketing costs. The land value is a residual in the calculation. It follows that top traditional industrial rents of £5.50 to £6.50, at Heathrow, imply a land value of little more than £400,000 an acre. "In the main," comments Mr Hubbard, "landowners will sit tight, hold on to their land and wait for better times."

When you can get the investment in traditional industrial property, say Ellis, it should be rewarding. At the end of last year the firm signposted the recovery of industrial property investment. They forecast that yields in 1987 would come back to at least a percentage point from the 8 1/2 per cent for prime property, and 11.4 per cent at average level that they measured in 1986.

For the Thames Valley, they say that as Britain was coming out of economic recession, property companies were able to pick up industrial sites for 15 per cent returns, so that even at the then higher costs of money they were more or less self-financing. Now that institutions and pension funds have come back in, as buyers of investment situations which are up and let, Ellis says, that average yields are down to 10 per cent for better quality properties in the Western Corridor, and 9 per cent for some.

Site values have come back from the £1.3m per acre established a few years ago in Slough, but Mr Hubbard foresees a point where they will begin to pick up again.

He is willing to forecast that this will happen over a 12-month time frame, beginning in the second half of this year. This would imply supply of land, and the beginnings of a new wave of industrial development from the middle of next year.

William Cochrane

Edge Star Properties' 27,000 sq ft mid tech at Poyle, near Slough, which, after a long wait, has just been let to Mitsubishi (UK), part of Japan's largest transportation group, at a rental of £7.25 a sq ft.

Retail

Town centres fight back

OLD FANS of the Western Corridor commercial property market may observe, where the development climate is hot, that retail property seems almost an afterthought—that is, until you get to Bristol, where the planning war between in-town and out-of-town shopping has grabbed a lot of the headlines.

However, this may be the headline mentality. Robert Bonwell, an associate dealing with suburban shops at agents Edman Erdman, compares last year's retailing—far from being a "follow-on" to the industrial, residential office and high tech development along the M4—as part of and parcel of that growth.

He can cite a number of developments to support that view. Slough is an A15 town but it is immediately south of Heathrow airport. It is threatened by an ARC out-of-town megacentre development of 850,000 sq ft proposed for Wraybury, near Slough. Its existing shopping centres on the Grosvenor Development, Elmleigh Centre completed five years ago, 238,000 sq ft and 45 units, originally let by Erdman to names like BHS, International, Marks & Spencer, Woolworth and Boots.

Mr Bonwell says that the units in the scheme are already too small—there has been a widespread pattern recently of successful retailers demanding more space per outlet—and strong demand has doubled rents at first review to £46 a sq ft Zone A.

Grovevale, accordingly, is submitting a planning application for a further 70,000 sq ft adjoining the centre on land to the south of Staines High Street. In addition, say Erdman, a planning application is in for the Staines Central Trading Estate, which is located immediately to the north of the High Street and has leases expiring in 1991-92. Hanover Trust, which owns the estate, is looking for 750,000 sq ft of retailing here in conjunction with MFC, Britain's second biggest property company.

There could, it seems, be a direct link into the scheme from the M25. Wraybury, on the other hand, is in greenbelt. Circumstances may be moving. Staines towards becoming the

major retailing centre which West London badly needs.

Back on the M4 proper, Slough won an award last November from the British Council of Shopping Centres for the refurbishment of the 400,000 sq ft Queensmere Centre, owned by Fortel Investment Management and the Lazard Property Unit Trust in a scheme project managed by Erdman.

The scheme added presence, security colour and style to the centre, which has 80 units with Marks & Spencer, Littlewoods and Tesco among the big names. Shop rents, say Erdman, have been brought up to High Street level, almost doubling from £25 to something in the region of £90 a sq ft.

Next station along the line is Reading, a major regional office, industrial and commercial centre. Its 150,000 sq ft Butts Centre was recently refurbished and renamed the Broad Street Mall. The growth of the town, say Erdman, has left this centre behind.

At any rate, the thrusting property development company London and Edinburgh Trust has revised its ambitions for the Courage Brewery site in the town to incorporate 330,000 sq ft of retailing based on the fashionable "galleria" concept.

L&E said last year that the development would provide over 40 shops, from major department stores and food halls to specialist outlets and boutiques; 1,100 car park spaces; over 1,000 jobs; £2.5m in annual rate revenue for Reading council; a direct pedestrian link with the existing Heales building; and a facility for the River Kennet, which has been cut off from the town for many years.

Discussions are apparently taking place with the planners and while an appeal date is set for August 4, because of non-determination of the planning application, Mr Bonwell believes that the local authority will recommend approval of retailing on this site.

Further west in Newbury the biggest property company in the UK, Land Securities, says that it is making successful progress with the Kennet Centre, Phase II. It has been let in its entirety to multiples like Mothercare, Our Price and Toy Factory and

Phase III is due for completion shortly.

This will take the total shopping area of the centre up to 170,000 sq ft. The latest phase will provide an enlarged supermarket of 53,000 sq ft for Sainsbury, a shop, four kiosks and a new multi-storey, 466 space car park.

A fourth and final phase is in the early conceptual and planning stage, says Lands. This will comprise further shopping so that the eventual total retail area of the Kennet Centre will be over 200,000 sq ft.

Richard Page, an Erdman associate dealing with provincial shops, looks at Swindon. He says that the Brunel Centre, 500,000 sq ft facing Regent Street, is beginning to look a little tired. However, he says, it is still a good percentage of the best retailing in the town built and controlled by the local authority.

The best section of Swindon shopping, he says, is the traditional pitch on Regent Street, where people are talking about 25 a sq ft Zone A and proving it on review.

On the other side of Regent Street is an extension of high street shopping called "The Parade" which leads to a Debenhams department store, car parks and bus stops. Sun Alliance intend to refurbish this section, and put a roof on it.

Other clients of Erdman expect to knock down a section of out-moded shopping opposite the Brunel, and replace it with 30,000 sq ft of units.

However, the local authority may regain the retail initiative. Mr Page says that it has a limited brief out with selected developers to develop a car park space south of the Brunel, and link into it. This could provide about 30,000 sq ft.

This process of refurbishing, stimulating and adding to older centres must be coming to its apogee at Bristol. Erdman says that major out-of-town schemes by the Prudential/Marks and Spencer, and by local developer Jack Bayliss, have been effectively called in by the Department of the Environment.

But whether they go ahead or not, they have put the town centre going. Ladbroke City and County is going ahead with an 800m, 300,000 sq ft centre at Broadmead; and next to Broadmead, Erdman is acting for ARC which is planning "The Bridge" which could be 240,000 sq ft, literally at the end of the M4 link to the M4, with 2,200 car park spaces within three car parks.

The out-of-town shopping threat, which features strongly in this survey last year, certainly seems to have brought its response from the town centres.

The future takes shape

Windmill Hill

Set in this attractively landscaped environment Windmill Hill is now ready. Phase One is let. Phase Two "Options" offers 69,000 sq. ft. of air-conditioned offices with parking for 240 cars. Phase Three a further 105,000 sq. ft. of flexible office space in the form of 3 individual buildings linked by a covered Plaza will be completed in mid '88. Fast approaching completion is the 130,000 sq. ft. PHH

Centre - European Headquarters of PHH International. Planning consent is granted for a further 500,000 sq. ft. on 45 acres. Situated just yards from Junction 16 of the M4 in one of the fastest growing areas in the country, Windmill Hill is ideally placed to meet the needs of modern business. To find out more about the future ring now.

Thames Valley

Pressures from growth put Mr Ridley on the rack

THE THAMES Valley is the prosperous heartland of England. And that in a way is its problem.

Its very prosperity creates a demand for the status quo from those who enjoy the prosperity. For this is the prosperity of open space, of economic development in a semi-rural atmosphere. Those who have moved in precisely because they prefer it to the big city do not want to see, and live in, the dynamism of the area.

Yet the dynamism of the area thrives only on the influx of the new and the expansion of existing companies. And it is natural that there should be this thrust for economic expansion. A skilled workforce, easy communications, easy reach of the financial services of London and the entertainment of the metropolis.

So the planners are in a cleft stick. They want to maintain the economic impetus and the broad thrust of Government planning policy demands that they should. But they do not want to allow untrammelled development because that would destroy some of the facilities that draw companies and people into the area in the first place.

In terms of future policy, the situation is uncertain. The whole matter is up for review. As far as the basic documents are concerned — the structure plans that are followed by the counties and act as *Yode mecum* for the developers — everything now depends on Mr Nicholas Ridley, the Environment Secretary. And the betting is that he will do little before the election. The very existence of the planning cleft stick makes it certain that anything he does will be wrong. He will think most analysts believe that there is little to gain from anything which might rock the conservationist boat.

In Berkshire, the crucial county, there is a jigsaw of three approved structure plans. But a single Berkshire planning review document is now before Mr Ridley. It is hardly surprising that there should be a review. After all the existing, unreviewed structure plans were approved in the late 1970s.

and that means the thinking behind them, given the length of time involved in the consultation process, dates back to the early 1970s.

The Thames Valley was always an economic region in its own right, but the thinking in the plans could not obviously have embraced the emergence of the area as a British high technology centre. Nor could it have anticipated the increase in motor traffic caused not only by more cars on the roads generally but by more people moving into the area.

Planning of two decades ago envisaged the London contribution spawning off westwards and

Infrastructure development should be allowed to catch up with commercial development. The message is "slow down"

that basic policy theoretically has never changed. The growth has indeed taken place. But in the review plan, which will be crucial for setting the limits to new development, the implication is that the growth has been too fast and that it ought to be slowed down. Infrastructure development should be allowed to catch up with commercial development. The message is "slow down."

How Mr Ridley will reconcile the broad desire to use the planning system to facilitate growth with the desire also to keep the green fields green is not obvious. Where do we go from here? There is not a consensus decision. Mr Ian Campbell of Campbell Gordon, the Thames Valley chartered surveyors, noted, the gaps between the towns are getting smaller.

The answer to absorbing the pressure for development while keeping most of the countryside intact could be found in allowing for development the land around the motorway junctions. This is the solution advocated by Mr Mike Kirkwood of Savills, another firm of chartered surveyors active in the area.

If you acknowledge that development potential was created by driving the motorway through countryside which was previously not accessible, surely it is better to concentrate development at motorway junctions and so leave untouched the true green belt," he said.

The Berkshire authorities have recognised this to the extent that land has been allocated for development at Junctions 11 and 12, for example. But more will probably be needed to maintain the pace of expansion.

A further source of land could be the use of worked out gravel pits and played out mineral workings. ARC Properties has come forward with a long-term mixed development plan for just such land near Reading. According to Mr Paul Kentish of Savills, "it is most suitable for some form of leisure activity."

Paul Cheswright

M4 PROPERTY 3

St Martins Property's 80-acre Windmill Hill campus development at Swindon

Heathrow

Stockley adds some class

HEATHROW, home of Britain's No 1 airport, illustrates a number of property developments on the M4 corridor, and on M4 locations in particular.

Local area specialist agents Rogers Chapman say that there has been a curious little development, to date, of high tech property — the high rent, flexible accommodation phenomenon which excited developers, and opened institutional investment coffers three or four years ago.

Their sums indicate 330,000 sq ft of existing high tech on the market in the locality, a fair proportion of that under offer, and 200,000 sq ft more proposed over the next 12 months. These totals certainly have been bypassed in slightly more distant locations.

However, they leave out Stockley Park, which could add up to 2.4m sq ft in three phases to the north of the airport. Maybe the thought is that Stockley will eventually be regarded as an addition to the area's office property supply, as and when changes to use class legislation are passed by parliament.

Meanwhile, Mr Russell Meadows, a partner in Rogers Chapman, highlights the revival in "mid-tech — modern industrial buildings with a 25 to 30 per cent office content. In fashion terms, this form had been overtaken by high tech in the early and mid-1980s.

He says that occupiers in the early 1980s were attracted by the glamour and hype of high tech. Mid-tech could not compete in some practical aspects, like parking in the ratio of one space to 200 sq ft of accommodation. In a way, good mid-tech parking, typically, is one space to 450 sq ft at an absolute minimum, but this includes lorry parking and circulation areas as well as the space devoted to cars.

Now, says Mr Meadows, a lot of the companies which he deals with say that mid-tech is more flexible inside, and that high tech, typically built on two floors with the offices up and the "industrial" down, is not much help to companies which need ceiling heights of over 20 ft for storage purposes.

He calculates that mid-tech

will rent for about £7.50 a foot against £10 to £12 for the high tech variety; and that ten sq ft is currently available with a large chunk under negotiation. Over the next 10, 12 to 15 months rents for Stockley Park have been raised to £14.50 on a gross basis, which might equate to £13 net against £12 for the top high tech and £16 for offices.

These office rents, says Mr Meadows, are for the immediate Heathrow area and have increased from £13.50 to £14 a foot 12 months ago.

North of the airport, close to Junction 15 of the M4, his firm has just sold Globe House, a 10,500 sq ft office building, for the development partnership of Sheridan Estates and Heron Property. The buyer was Memorex which, says Mr Meadows, was originally willing to pay the £16.50 a foot which he was quoting for the building, but decided to go for the freehold instead.

The urban office centres are Hounslow, Uxbridge and Staines. Hounslow has a good underground link into central London and other good public transport facilities. But it is noisy, dirty and unprepossessing, say observers, and for a commercial centre, the road infrastructure is not good. It is also a very densely-populated residential area.

But it does have big users, like Wang, Squibb Pharmaceuticals and International Harvester. Rents are around £15 a foot in the town; Lesser Land, says Rogers Chapman, is building a new office building of just over 100,000 sq ft to be called Trinity Court, and expecting well over £14 a foot for it.

Uxbridge can now be accessed with no difficulty with its

either pulled down or strongly tipped at tenants, Mr Lipton is happy enough.

"By June we will probably have let 500,000 sq ft," he says. "That would be on target."

Rents for Stockley Park have been raised to £14.50 on a gross basis, which might equate to £13 net against £12 for the top high tech and £16 for offices.

North of the airport, close to Junction 15 of the M4, his firm has just sold Globe House, a 10,500 sq ft office building, for the development partnership of Sheridan Estates and Heron Property. The buyer was Memorex which, says Mr Meadows, was originally willing to pay the £16.50 a foot which he was quoting for the building, but decided to go for the freehold instead.

But it does have big users, like Wang, Squibb Pharmaceuticals and International Harvester. Rents are around £15 a foot in the town; Lesser Land, says Rogers Chapman, is building a new office building of just over 100,000 sq ft to be called Trinity Court, and expecting well over £14 a foot for it.

Uxbridge can now be accessed with no difficulty with its

M25 link between the M4 and M40. It has big new office buildings in Central Square, occupied by Hewlett Packard, and Charter Place, developed by Sun Alliance. Trafalgar House has another 164,000 development on the way in a location which has made rents of £14 to £15.50 a foot and is talking about £17.50 similar to central Hammersmith, for some new schemes.

Staines is probably a good combination for those who want both office accommodation, and good shopping. Beaconsfield Estates is busy there, with Barclays de Zoete Wedd as development partner, in the Finetrees — a scheme which emphasises the company's support of high tech as a long-term development proposition.

The development incorporates four buildings, one office and three high tech. The office building is being quoted at £16.50 a foot, emphasising the perceived quality of the location, while the high tech is going for £11.50.

In conclusion Mr Meadows describes pockets of land in the Heathrow area, designated as green belt but surrounded by acres of concrete, as a "major absurdity." Neither is he happy with the operation of linear park, grasslands alongside the strip development to prevent desecration of the countryside.

He observes that the first serves no practical purpose; and that the second would be admirable, but he feels that the authorities use it only on an ad hoc basis. That way lies confusion, and more and more planning appeals.

William Cochrane

Business parks posers

BUSINESS PARKS are vague: so-called hi-tech buildings in a leafy environment, plenty of car parking, away from the aggravation of the big town.

Right down the M4, the developers are piling in, big and small alike, to provide them. Institutions like Prudential Assurance with a £100m scheme at Reading are involved. The military establishment, through the Royal Military College of Science, is taking part in developing a business and science park at Shrivenham.

Taylor Woodrow is active on the outskirts of Swindon: Arlington Securities has bought land at Theale; Besser Developments has just finished building at Theale; Sheridan Securities is constructing near Reading; the Royal Military College of Science, is taking part in developing a business and science park at Shrivenham.

In Swindon St Martins Property is developing as is LCP Properties, while the Imperial College of Science and Technology is making land available at Ascot.

The question now is, to what extent, these types of development will affect the conventional town office market. And this is a question worth posing because of the expected changes in the Use Classes Order.

The changes will enable occupiers to use premises more freely, permitting, for example, research and development or office activity to take place in a light industrial building.

Developments in parks could go some way towards mopping up office demand which has been frustrated by the relatively low level of office development in town centres. Cairns Sarraf, the Swindon chartered surveyors, has noted a dramatic increase in inquiries.

Office demand down the M4 though is not uniform. Jones Lang Wootton, Reading, with rents running up to £15 a square foot, the highest for any provincial centre, is the town with the greatest potential for rental growth. More generally, some specialists are predicting for the areas closer to London a rental increase over the next 15 months of up to 30 per cent.

Bristol

Demand for blue chip offices

BRISTOL IS having to live with the consequences of success. Its pleasant environment, good housing, superb commercial position at the intersection of the M4 and M5 motorways and lively lifestyle have made it a very desirable place in which to live.

As a consequence it has attracted in recent years a number of blue chip incomers, Phoenix, Immos, London Life among them. Now Lloyds Bank is moving a head office operation to the city.

Suddenly, the stock of offices, small factories and distribution units has almost dried up. Two

or three years ago, following a building boom in the early 1980s, there was a surplus of properties across the board; today, it is difficult to get a good one.

"Demand is very strong indeed," says Mr Jonathan Carey, a partner of J. P. Sturge. "So strong that fears are beginning to surface about a possible under-supply emerging."

His view was echoed by Mr Mike Henry, a partner in Chesterton Lalonde, who sees a very buoyant demand for a narrow range of supply. "There is a particularly strong demand for quality offices and distribution

warehouses." Even in manufacturing he sees an improvement in the situation.

The worrying thing about the office market is that there are only two buildings available in the city at the moment over 50,000 sq ft. Spectrum House, in the centre, a Prudential development, has been on the market for about three years. "The developer has been looking for a single tenant but has recently decided to go for multiple occupation and recently let about 10,000 sq ft to Welbeck Finance."

The other building is the Lombard Centre in Bedminster, the former Imperial Group headquarters slightly outside the centre, which has been radically refurbished. The quality of this building is said to be quite exceptional, "and, being outside the centre, enjoys the luxury of some 200 car parking spaces. The centre occupies some 88,000 sq ft and a rent of over 20 a square foot is being asked compared with around 20.50 for Spectrum."

Rents in Bristol are now running sharply up as demand outstrips supply, especially for buildings with "modern" facilities, such as air conditioning and raised floors necessary for high-technology cables. The result is that rents are pushing 210 a square foot for existing buildings and probably over for new developments.

The problem is that there are not many of these coming through. The council is taking a strong line on new work. Mr Carey instances the problems Standard Life is having with its proposed Redcliffe Street development of some 50,000 sq ft. It has put up several schemes to the city but all have been turned down.

Several agents in the city believe there is a great danger that if the planning authority does not take a more sympathetic line towards developments further job-creating schemes could be endangered.

Demand for offices under 50,000 sq ft is particularly strong, especially from professional firms, many of them local. The solicitors and architects and others appear to

like properties in the 15,000-20,000 sq ft range and here again the problem is matching the building to the client.

Fortunately, there are new schemes in the pipeline which should be ready in about 15-18 months' time. This, says Mr Henry, should ease the situation.

Rental growth since 1980 for prime accommodation, according to Mr Carey, has been higher than in any other provincial city and he sees that rate of growth continuing. Since 1969 rental growth has been approximately 12 per cent a year, though he admits that 1980 was a low base.

Even so, rents now offer an attractive return on bringing properties built in the late 1950s and early 1960s up to date.

On the industrial property side, Mr Henry sees strong demand. "We notice that people particularly want quality buildings," he says, reflecting in this sector what is apparent in the office field.

The motorway intersections to the north of Bristol are particularly important for the distribution industry and the Artec West development, although originally designed for high-tech manufacturing has attracted a number of distributors.

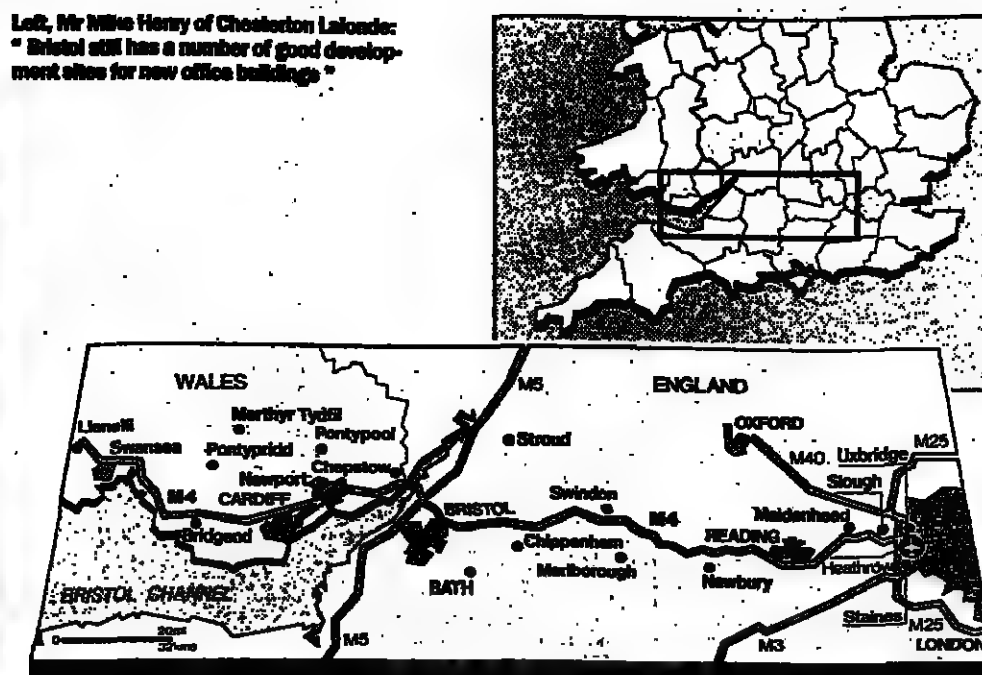

It is not just rented space that is wanted, Mr Henry believes. "Freeholds are becoming increasingly popular and there is a shortage of good freehold buildings available, especially those with main-road frontages."

Artec West was developed by Electricity Supply Nominees, one of the few institutions which have shown an interest in the area. Despite the fact that speculative warehouse-distribution units have been very popular, and have brought record rent levels of around 24-25 a sq ft, it has still been difficult to interest other institutions.

But if the impression remains one of over-supply, the city of Bristol is a fast-moving market. According to the Sturge report there is probably "only six months' supply in the key sectors."

Anthony Morston

Left, Mr Mike Henry of Chesterton Lalonde: "Bristol still has a number of good development sites for new office buildings."

Cardiff

Quality in short supply

INDUSTRIAL SOUTH Wales is commonly thought to be in the economic doldrums but, according to Mr Roger Thomas, of Cooke and Arkwright, there has been a big pick-up in inquiries in the past six months.

"The change has been dramatic. There is more confidence around and deals that even a year ago would have taken some time to complete are being done quickly now."

His optimism is shared by Mr Phil Head, commercial director of the Welsh Development Agency. "There is good demand for property and some quite substantial rents are being achieved."

Neither is yet convinced that the upturn in the Welsh economy is responsible for the better times. But it is clear there has been a substantial change in mood along the M4, from the Severn Bridge to Bridgend. Further west, too, in Swansea demand is also buoyant.

The main factor appears to be the shortage of good new properties. After the steel closures of the early 1980s and the subsequent crash programme of advanced factory building by the WDA there was a surplus of properties available. Those factories have now been absorbed and the market is short of good properties.

The change has also led to a resurgence in demand for the older, leasehold factories. "For example, in the spring of last year we had a 94,000 sq ft property in a good northern suburb of Cardiff that was something of a nightmare to us. Now, even that is going," explains Mr Thomas.

Mr Head sees the confident mood for industrial properties spreading out beyond Cardiff. "We seem to have overcome the psychological barrier of the outer-Cardiff ring. Llantrisant, which was once slow moving, is now going well and Treforest, about six miles to the north of the city, is no longer looked upon as a valley site."

"Not that all the valleys are difficult to move now. Merthyr is full and we would like more properties there," he adds. "It is in the office sector that the bigger problems exist. The market for properties built 25 years ago is poor." Mr Thomas says, "Indeed, there are some

that need pulling down."

On the other hand, "Fitzalan Court, completed last year, is all but full at 27 a sq ft. The top prices are rising and have reached 27.50-28."

Cardiff's surplus office space stems to a considerable extent from the building of a new Welsh Office, opened in 1981, which released a lot of older buildings around the city that until then had housed civil servants.

This situation will be repeated next year when a new administrative headquarters for South Glamorgan County Council opens its doors in the redeveloped docklands, leading to the relocation of local government personnel.

By the end of 1988 some 170,000 sq ft from this source will come on the market, all of it second-grade. Taken with the existing stock of short leasehold properties that are coming towards reviews the situation in this sector is discouraging.

"The trouble is that much of this market needs great improvements," Mr Thomas says. "These buildings were not put up with the modern computer-based office in mind and so are inadequate by today's standards. They have no air-conditioning and highly restricted car-parking. Some have just one space available for each tenant."

Where older offices have been refurbished there is an active market at around 25 a sq ft. But much of the big stock of county council property coming onto the market is not in good shape and will undoubtedly become a drag on the market. "I simply do not know what you can do with older stuff like this," Mr Thomas says. "The only practicable answer is to pull much of it down and build afresh. But that is hardly likely to happen. This country builds places to last for ever. You sign leases for ever. But you can't now see more than 5-10 years ahead. It is a difficult equation."

Beyond 1988 there is the massive redevelopment of Cardiff's docklands being undertaken by a newly-established urban development corporation. That will also add a mix of new manufacturing and office premises. The aim is to produce a

Shampoo Valley

The Welsh Development Agency has undertaken a considerable amount of building in the Bridgend area alongside the motorway and has been highly successful in attracting new business to the site. In particular, it has drawn in a number of companies in the hair-care and beauty preparations sector to the point where some locals now call this part of the motorway lipstick corner and other shampoo valley.

Most activity, though, has concentrated on Swansea, the second city of Wales. In the centre, there have been retail schemes such as the Quadrant Shopping Centre and, more recently, the St David's Centre while a lot has been done to upgrade the waterfront through the Maritime Quarter.

The other major concentration is on the Enterprise Park which is Swansea's name for its enterprise zone. This is the largest in the country—775 acres—and is virtually all in the ownership of the council.

Still further west, almost at the end of the M4, Llanelli has a 98-acre site in the Trostre Industrial Park, which contains 24 units ranging from 750 sq ft to 5,000 sq ft and the 60-acre second phase is soon to be developed as a retail park.

Alongside the A48 the Cross Hands Business Park is being developed as a retail and distribution centre to cater for West Wales. The area covers some 180 acres while another 50-acre site is available at the Pembrey Industrial estate.

INTERNATIONAL COMPANIES and FINANCE

David Gardner looks at Mexico's controversial bank privatisation programme

Pricing and politics spice Mexican sell-off

THE MANNER in which the Mexican Government has re-declared its long-standing pledge to sell off minority stakes in the nationalised banks has sparked controversy and confusion through its mixing of political and financial techniques.

The country's three major commercial banks — Bancomer, Banamex, and Banca Serfini — have now issued new stock equivalent to 34 per cent of their paid-in capital, and three smaller banks, Crea, Confa, and Banco del Centro, led off for the second division last week.

The principal causes of the controversy are the enormous discounts offered on the shares and the virtual selling of virtually all the stock to bank executives and employees, and to lists of clients which the evidence that has so far emerged suggests were chosen as much on political as banking criteria.

Banamex and Bancomer, which each account for roughly a quarter of the commercial banking system's assets, issued their shares, known as Certificados de Aportación Patrimonial, or CAPs, on February 6, at Pesos 11,000 (\$11.04 at the exchange rate of the day) and Pesos 24,000 respectively.

In the first five days of trading, Banamex CAPs rose 244 per cent and Bancomer's appreciated 150 per cent. Two months later, their respective prices stand at Pesos 54,600 (\$48.28 at April 6 exchange rate) and Pesos 78,600 (increases of 396 and 228 per cent).

Mr Gustavo Petricoli, Mexico's Finance Minister, describes market response as "an extraordinary success... and show of confidence in the (state's) management of the banking system." The opposition, particularly at La Jornada, regards the sell-off as a major scandal.

The centre-left La Jornada, Mexico's most independent daily and the only one to grasp immediately what was going on, for example, argues that the sale has severely compromised President Miguel de la Madrid's pledge to clean up corruption through the Government's already badly discredited "more honest" campaign. El Financiero, Mexico's financial daily, called the sale "one of the most speculative operations in the financial history of the country."

The Banamex and Bancomer shares were by any yardstick excessively underpriced, issued at an historic price/earnings ratio of about 1.5, and an effective price to net worth ratio of 39 per cent. This contrasts with an average on Mexico City's booming stock exchange of about eight times historic earnings in February and a multiple of around 16 now.

Mr Petricoli argues that "we could not take the slightest risk

parallel banking system. This now holds nearly a quarter of national savings (a threefold increase on 1983) and competes on advantageous terms with the state banks.

The banks have high fixed costs, their main business (over 80 per cent) is financing government borrowing, and the most lucrative areas of the market have been turned over to former bankers (Mr Petricoli took this a stage further recently by appointing plans

playing a regulating role in the stock market, tried to unload packages of blue chip shares on March 3 — when the exchange took a nosedive — and failed because it had overpriced.

Secondly, he underlines that both the big banks issued two convertible bonds for each CAP. These bonds — issued at a discount rather than a premium — are redeemable on pre-set dates beginning on May 6, at market price minus 25 per cent.

best is being generated by the methods of allocation.

The decision to reward employee loyalty — using a mechanism which existed pre-1983 — is unquestionable. Bank workers have taken sharp cuts in real earnings (against very attractive remuneration in the parallel financial sector) yet have kept the banking sector dispute-free since nationalisation. It would be hard political management by the PRI not to reward them.

But a less visible political advantage would seem to arise from the allocation of the major portion of the stock to favoured clients. For obvious reasons banks decline to reveal names, while reserving the absolute discretionary right to decide who their best clients are.

But senior bank executives spent several months (during the provinces pre-selling the stock, at least some of which, market analysts say, went as sweeteners to exactly the sort of right-wing, North Mexican businessmen who have been hankering the vigorous challenge to the PRI mounted by the right-wing National Action Party (PAN) since the 1982 crisis. The northern private sector was particularly hostile to the expropriation of the private banks through which, many believed, the Government attempted to shift the blame for the 1982 financial crisis.

Senior bankers also confirm that selected journalists have been given CAPs — a more sophisticated version of the "subsidy" or money-aided envelope which all government offices except the Bank of Mexico and the Foreign Ministry give most Mexican journalists who cover them.

In Mexican business circles the share issues are seen as either a wheeze or an outrage — a difference in opinion determined, it would appear, by whether or not the person in question received an allocation. Public sector unions being denied an emergency 25 per cent wage increase have described the issues in full-page advertisements as "obscure speculation." They appear unimpressed by double-page advertisements taken out by some banks explaining the mysteries of subordinated convertible bonds. Like the recipients of the CAPs, they are only looking closely at the bottom line.

De la Madrid (left) — pledged to reverse Lopez Portillo's expropriation

of the issues being rejected. This point needs little elaboration for Mexico's long-drawn-out private sector, still snarling from former President Jose Lopez Portillo's surprise expropriation of the private banks in September 1982, at the height of the country's financial crisis.

His successor, Mr de la Madrid, defied left-wing nationalist opinion in and outside the ruling Institutional Revolutionary Party (PRI) by embarking almost immediately on a drive to win back business confidence through partial privatisation of the banks.

First, in 1984, he sold 49 per cent

holdings in 339 companies, including financial services companies like stockbrokers and insurance houses, allowing former bank shareholders to purchase them with treasury bonds issued in compensation for the takeover. The financial companies quickly became the core of what is de facto a

parallel banking system. This now holds nearly a quarter of national savings (a threefold increase on 1983) and competes on advantageous terms with the state banks.

The banks have high fixed costs, their main business (over 80 per cent) is financing government borrowing, and the most lucrative areas of the market have been turned over to former bankers (Mr Petricoli took this a stage further recently by appointing plans

playing a regulating role in the stock market, tried to unload packages of blue chip shares on March 3 — when the exchange took a nosedive — and failed because it had overpriced.

Secondly, he underlines that both the big banks issued two convertible bonds for each CAP. These bonds — issued at a discount rather than a premium — are redeemable on pre-set

best is being generated by the methods of allocation.

SARA LEE CORPORATION

Summary of results for nine months ended March 28, 1987

(Dollars in millions except per share data)	Third Quarter 1987	Third Quarter 1986	Per cent. increase	Nine Months 1987	Nine Months 1986
Net sales	\$2,191.1	\$1,932.0	13.4	\$6,590.7	\$5,929.4
Pre-tax income	\$100.8	\$77.1	30.7	\$323.3	\$286.4
Net income	\$59.4	\$51.4	15.4	\$187.4	\$161.8
Earnings per share	\$5.54	\$4.46	24.2	\$1.71	\$1.46
Dividend per share	\$2.25	\$2.20	2.3		

(Fiscal year ends June 30)

*Rounded to nearest 100,000 stock split.

In U.S.-based operations, broader product distribution and aggressive marketing served to increase results in virtually all categories. Unit volume growth was strong: +10% frozen baked goods; +6% processed meats; +20% hosiery; +23% knitwear; +7% food service.

The major international businesses, Nicholas Kiwi and Douwe Egberts, were favorably affected by the weaker dollar, and had good results in local currencies.

Notice of Adjustment in Conversion Price

GENERAL ELECTRIC OVERSEAS CAPITAL CORPORATION

4 1/4% Convertible Guaranteed Debentures Due 1987

NOTICE IS HEREBY GIVEN to all holders of 4 1/4% Convertible Guaranteed Debentures due 1987 (the "Debentures") of General Electric Overseas Capital Corporation that pursuant to Article Three, Section 3.04(d) of the Indenture under which the Debentures have been issued, effective at the opening of business on April 24, 1987 the conversion price at which the Debentures may be converted into the Common Stock of General Electric Company is adjusted from \$40.375 (US) to \$20.1875 (US) by reason of the split of each share of such Common Stock, per value \$1.25 per share, into two shares of Common Stock, each with a par value of \$0.63 per share.

GENERAL ELECTRIC OVERSEAS CAPITAL CORPORATION

Dated: April 24, 1987

"To catalyse is to accelerate the birth of something new."

Neste is a dynamic and expanding oil, energy and chemical corporation.

Neste excels in three basic phenomena: combustion, catalysis and polymerisation. Our detailed knowledge of these phenomena is put to practical use in developing products and exploring new potential applications of energy and chemicals.

Catalysis requires top-level know-how

Catalysis is concerned with the controlling and accelerating chemical changes. It permits the fundamental control of man-made materials and, for this reason is the main focus of attention of Neste's R&D work. As experts in catalysis for oil-refining and petrochemical industry, we offer our customers' top-quality oil products, polymers and chemicals, and also special products that demand the highest level of technology.

Neste's expertise in catalysis extends from basic oil-refining processes to polymerisation processing for the finest plastics. Electrically conducting plastics comprise one of our special fields.

One current area of research deals with electrochemical storage of energy in polymer batteries.

Active in the international community of scientists

Neste's know-how is becoming wider, deeper and more international. Our research and development extends from basic research right through to production.

In terms of the industrial application of science, Neste is one of Scandinavia's most advanced corporations. Our collaboration with institutes and universities in various parts of the world is extensive. With business units in 30 countries and an active role in the international scientific community, we have a wealth of contacts and scientific know-

Lars G6dda, Doctor of Technology, Manager of Physics Research, Neste Oy

ledge at our disposal. Neste's experts are highly regarded in the energy and chemical fields throughout the world.

Human resources are invaluable

Advanced technology creates the key to Neste's continued success. We believe that people are the most important resource in research and development. In skilled hands technology is a perfect tool.

Our advanced technical know-how and skills can offer you and your company new exciting opportunities.

We are constantly looking for new opportunities and partners to cooperate with in our own special areas. If you are interested in Neste, send us your business card or post this coupon to the following address: Neste Oy, New Ventures, Keilaniemi, SF-02150 Espoo, Finland. I would like to know more about Neste's activities in:

☐ oil ☐ chemicals ☐ shipping ☐ batteries ☐ gas ☐ technology ☐ I would like general information on Neste.

INTL: COMPANIES and FINANCE

Stefan Wagstyl on the Perth entrepreneur's latest investment gambit Bond builds strong position in gold

MR ALAN BOND, the Perth entrepreneur, always knows the price of gold.

Between buying television stations, hotels and breweries, as well as racing yachts, he has found time to build one of the largest gold mining groups in Australia.

In a series of acquisitions, mergers and disposals, he has set up a strong position for himself in an industry which is undergoing a spectacular revival.

Mr Bond says: "Gold mining in Western Australia has got very long life prospects. It's obvious that the old timers must have left very substantial resources behind."

He is in the midst of bringing most of his gold mining interests into one listed company, North Kalgurli Mines, which is valued at more than A\$400m (US\$258.5m) on the stock market and is controlled by his private master company, Dallhold Investments.

North Kalgurli is close to completing the acquisition of another Bond group gold company, Windsor Resources. It recently announced plans to buy the gold assets of a third Bond mining company, Metals Exploration, and speculation is rife that it might go for a fourth—Endeavour Resources.

Mr Bond's corporate moves show how an aggressive company can grow very quickly in what is a fragmented industry. The point is that exploration companies can compete effectively if they are small—they just need to find the right ground. But when they become producers there are great advantages to be gained from merging to share plant and offices.

Mr Bond is one of a number of predators looking to rationalise control of the industry. Mr Bond says: "I think we are leading that charge really... We will pick up small shows as they run into trouble."

Mr Bond first invested in the mining industry 30 years ago, exploring for copper in the Kimberley mountains in north Western Australia. Ventures in iron ore, diamonds, emeralds, and nickel followed.

His efforts in nickel exploration in the early 1970s came to the same sudden end as those of other prospectors when the Australian nickel boom collapsed.

However, an investment in

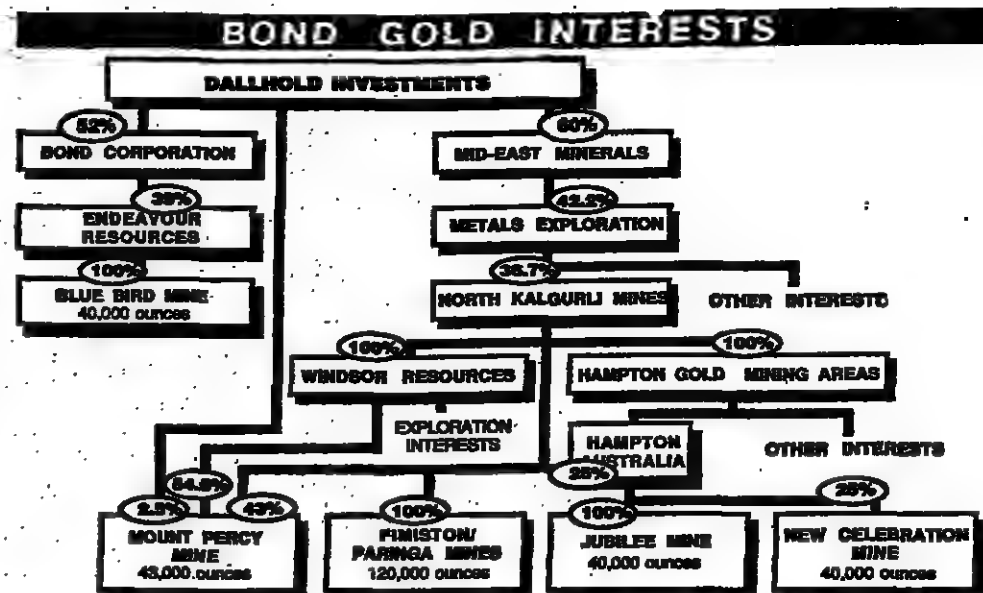

Argyle, which later became the world's biggest diamond mine in Western Australia, paid off handsomely. It was a shrewd deal made at a time when others were ready to scrap the project. Mr Bond's flamboyant wife Eileen celebrated its success by wearing Argyle diamonds. "Why not?" she was quoted as saying. "Alan owns the mine." (Not quite—he owned 5 per cent.) The Argyle stake was sold in 1983 for A\$42m to help reduce

series of acquisitions. In order to make his funds go as far as possible, Mr Bond typically built up stakes of 20 to 30 per cent in a target company, sometimes following up later with an outright bid.

The crucial move was the acquisition in 1985 of control of Metals Exploration, a nickel and gold company, which in turn controlled North Kalgurli Mines. North Kalgurli's mine asset was the Finlismine mine on

Kalgoorlie. Earlier this month, Mr Bond announced plans to move these gold assets into North Kalgurli, leaving Metals Exploration with some unpromising nickel interests.

The group has gold interests beyond the Kalgoorlie region—several hundred miles away Endeavour Resources runs the 40,000-ounce-a-year Blue Bird mine in the Murchison Goldfields. Further afield, Mr Bond is negotiating to buy Atlas

debt. This was not unusual for Mr Bond—his entrepreneurial career has been marked by occasional cash shortages which he has always managed to survive.

But by then Mr Bond's attention in mining was firmly fixed on gold. He says that with his experience in iron ore, he was among the first to appreciate the possibilities of mining low-grade deposits left behind by earlier generations of miners, by using large-scale, modern open-pit methods.

However, analysts in Perth say that it was not expertise in mining that distinguished Mr Bond but an "uncanny ability to pick a trend." One said: "He got into gold when it was cheap to get in. He is not a specialist in anything except money."

The group's gold interests were bought in a sporadic

Kalgoorlie's Golden Mile, where the greatest riches of 1890s gold rush were found. This was followed by the acquisition early last year by North Kalgurli of the Faringa mine next door to Finlismine.

After raising A\$164m in two rights issues last year, North Kalgurli bid for Windsor Resources in January 1987. If this is completed as expected, North Kalgurli will take its stake in another Kalgoorlie property, Mount Percy, from 45 per cent to 97.5 per cent. Dallhold Investments' has the remaining 2.5 per cent.

Meanwhile, Metals Exploration last year successfully bought a contested bid for the UK-based Hamiton Gold Mining Areas, which controlled Hamiton Australia, a company with an interest in Jubilee (100 per cent) and New Celebration (25 per cent), two mines south of

Mining in the Philippines and has plans to invest in North America.

But North Kalgurli is the centrepiece. Mr Bond says the company should be producing at a rate of 220,000 oz gold a year by June 1987, and 300,000 oz a year by mid-1988. The plan is to reach 500,000 oz a year, much of it coming from the proposed "Big Pit," an open-pit mine up to five miles long on the Golden Mile properties. The company also has high hopes for its exploration programme on the extensive prospects in the Kalgoorlie region brought together by the acquisitions.

Mr Bond has no worries about the future of gold. The current instability in international trade relations and in financial markets means stability in the gold industry, he says.

STRONG COMPANIES CHOOSE STRONG PARTNERS

"Only a durned fool or a crazy man thinks he can build a horseless carriage." Henry Ford was neither, but he did have a dream. He wanted to set the world on wheels. This determined genius founded the Ford Motor Company in 1903 and began producing the first practical alternative to the horse and buggy.

He couldn't reach the whole world immediately. But the phenomenal success of the hand-built Model A enabled him to start shipping cars to Europe barely a year after he began. And 1911 saw the birth of the first Ford assembly plant in Britain.

Today, Ford of Europe employs over 109,000 people at 28 manufacturing and assembly centres in seven countries. Annual production is 1.5

million vehicles for the European market and for export to 123 other countries.

Henry Ford pioneered mass production and forever changed the face of modern industry. In the same tradition, Ford of Europe has been an innovator in the use of computer-based management and control systems, for everything from design to delivery.

Communication with computers is impossible without terminals—and in Britain, over 80% of Ford's 1,500 terminals are Alfaskop from Ericsson Information Systems.

Why did Ford choose Ericsson as its

business partner in this key area?

Ericsson's Alfaskop terminals have long been noted for their quality, their first-class ergonomics and their ease of installation. And for rapid and flexible communication with host computers of different manufacture. Also, Ericsson tailored their service to meet Ford's needs by providing on-site technical support for the terminals network at the Warley Data Centre.

Ericsson Information Systems, a member of the Ericsson Group, manufactures and markets a complete range of products in the information systems area.

Ford and Ericsson. Strong companies choose strong partners.

Why there are fewer road works in Cork

Terry Dodsworth, Industrial Editor, explains how the city has mapped out a more efficient utility management system

WHEN A gas pipe repairman starts to dig up a road in most cities in Britain, he will probably have only an approximate idea of where the electricity mains supply runs, or if there are telephone cables nearby. In many cases, he will also be working with a map that is not entirely up to date, and he could arrive on site to find that the local authority has embarked on major road works without his knowledge.

These are the sort of problems which the UK arm of Intergraph, the US computer graphics group, set out to solve recently in the city of Cork in Southern Ireland. Its answer is a computerised database and mapping system which aims to plot the location and precise details of every pipe and cable laid under the ground by the city's main utilities — along with the latest map configurations provided by the Ordnance Survey and details of the city corporation's road and service networks.

Intergraph believes that this system has significantly extended the application of digital mapping in the management of utility services. The company has already applied its mapping techniques to a number of individual utilities in Britain, building up a database for them and constructing maps of their services networks that can be displayed on screens. But the Cork system will allow all of the partners to combine their individual maps, thus co-ordinating their activities.

In future, for example, it will be possible for the electricity supply board engineers to bring up a sector of Cork on the company's screen, complete with a graphic display of its own cabling network.

The engineers can then superimpose on this picture the diagram of the gas company's pipes, and on top of that, they can put Telecom Eireann's telephone lines, and the location of the city corporation's water mains and sewerage drains.

The advantage of this computerised system falls into two categories. First, there are the benefits which should flow from co-ordinating information from the different utilities and the local authority.

Traditionally, there is little requirement on these separate organisations to liaise with any of the others. Local authorities have to be told when a pipeline is going to be dug up, and other utilities are usually consulted. But if a project is urgent, there may be no consultation at all, with the result that repairmen may arrive at the scene of the project with little information about what is underground.

Using the graphics system, however, engineers will be able to print up a precise, colour-coded map of the area they will be excavating, delineating both the pipes of their own company and those of the other utilities. They will also be able to see if there is any similar work planned by these other organisations, because the mapping system is equally capable of showing where repair or construction work is in progress.

In addition, Mr Leo Corcoran, the senior operating engineer at Cork Gas, and the main architect of the new scheme, believes that the system will generate much improved work planning among the utilities. The data-sharing arrangements, he argues, should lead to greatly-reduced duplication in

Where Swedish science meets commercial reality

BY SARA WEBB IN STOCKHOLM

THE image of a science both dedicated to research and with absolutely no notion of its practical and commercial applications is not one which bothers Dr Gunnar Skagnum.

For he is managing director of Syn-tek, a small Swedish company founded and owned by a group of biotechnology researchers who had the idea of offering to develop basic research ideas along commercial lines for other companies.

The 12 founder-owners are attached to the universities of Umeå, Lund, and Gothenburg in Sweden, where they work in the fields of carbohydrate chemistry, genetic engineering and cell biology.

At the same time, they act as consultants for Syn-tek, injecting ideas into the company, where about 20 other researchers work on developing practical uses for the research. "It helps to avoid some of the conflict arising in universities, where the emphasis is on pure

research rather than the commercial applications," says Dr Skagnum.

After two-and-a-half years, and a clutch of small contracts in the diagnostics field, the approach appears to have paid off. Astra, the Swedish pharmaceutical group, has decided to adopt something of a "sugar-daddy" role in Syn-tek. Through a new share issue, it is taking a 25 per cent stake in the company, which last year had a turnover of about SEK 10m (2870,000). And it has agreed to work with Syn-tek in the development of new drugs.

While Syn-tek carries out the basic research, Astra will pay for pre-clinical research in the development of drugs which it hopes will help it to compete with its Swedish pharmaceutical rivals, Pharmacia. "It gives us a right to commercialise Syn-tek's ideas in the pharmaceutical field," says Astra.

Swedish drug companies

feel hampered to a certain extent by the country's shortage of researchers in the fields of genetics and molecular biology. Chiefly for this reason, Pharmacia recently chose to set up its genetic engineering unit in California, while Astra saw great potential in appealing to Indian scientists, who had trained in the West, to join its new research centre in Bangalore.

The Union with Syn-tek helps to strengthen Astra's research base in Sweden. "It is rather unusual here for academic researchers to form a company like Syn-tek," says Mr Staffan Ternby of Astra. Usually the pharmaceutical companies employ "adjunct professors" who are paid by the company but who spend part of their time teaching at universities and maintaining links with researchers.

In Syn-tek's case, Astra has its eye on two projects which could be important in the

development of new drugs. The first is to develop the human enzyme known as extracellular superoxide dismutase (ESD) for possible use in limiting the extent of tissue damage which results from a heart attack or from inflammatory conditions such as rheumatism. Syn-tek has been working on modern cloning techniques to mass produce the enzyme and Astra hopes to start testing within a year. "It is at a very early stage and we do not know what effect this will have," says Mr Ternby.

The other main area of interest concerns research into cell surfaces and in particular, how bacteria or viruses interact with chemical receptors on the cell surface.

Research here could help in the development of "fake receptors" which could bind with the invading bacteria, more effectively than the real receptors and so block entry into the cell.

WORTH WATCHING

Edited by Geoffrey Charlish

Tools get power to go anywhere

DRIFTGATE, of Aylesbury, UK, is offering a kit which allows the engine power of a car or truck to be converted into DC power at 110 or 240 volts. This means power tools and welding plant can be operated at work sites where no mains power is available. The kit uses a specially wound alternator that is substituted for the

vehicle's conventional unit, leaving the normal electrical system unaffected. Also supplied is a controller, which, on site, cuts in to bypass the battery and utilise the engine power direct to provide up to 2,500 watts continuously. The kit costs £475.

Management data is on the move

A NEW UK company, Portable Data Communications, is offering a portable radio communications system, the PDCCS, aimed at executives on the move and with no access to mains electricity or telephone line connections. The unit enables a personal computer to be used exactly as if it would in the office or at home — with access to remote databases and corporate computers.

Working with Radiol, the UK electronics group, Portable Data has built a cellular radio and a data modem (data send/receive device) into a single battery-operated unit that can be plugged into any portable computer having a serial data connection (RS232) and appropriate software.

Expert approach to industrial safety

W. S. ATKINS Engineering Sciences, the UK consultancy, is taking part in a project that proposes to apply an expert systems approach to the problem of analysing safety risks in large industrial projects. Expert systems seek to capture human knowledge for use by a computer.

Part of Eureka, the pan-European technology research programme, the project is called Fibex, a combination of the English word "expert" and the French "sûreté" (which means "reliability"). The demand for Fibex arises from the time and difficulty involved in assessing the risks prevented in operating chemical, pharmaceutical, nuclear, oil, gas, aerospace and other large-scale plants. The disasters at Chernobyl and Bhopal have highlighted the need for improved safety analysis.

W. S. Atkins and other consultancies in France, Italy and Spain will seek to computerise certain aspects of safety and reliability analysis in order to make it quicker and of higher quality. At the moment, such work is

extremely time consuming and tedious and mistakes can be made in spite of the care taken. This alone can generate resistance to even making a start, regardless of the obvious long-term benefits.

W. S. Atkins is asking sponsors from a range of industries to participate in the development of specific applications of Fibex. The cost to each sponsor is likely to be between £20,000 to £50,000.

Spy in the engine will tell of wear

AE CONTROLE and Technology of Sheffield, UK, has a sensor which, installed in lubrication circuits, can detect abnormal wear in engine parts. A sufficient deposit of metal wear particles on a special grid will complete an electrical circuit to sound an alarm. Maintenance is then possible before engine failure.

FREE STATE CONSOLIDATED GOLD MINES LIMITED

(Incorporated in the Republic of South Africa)
Registration No. 00/2310/006

DECLARATION OF INTERIM DIVIDEND NO. 44

On Thursday, April 23, 1987, dividend No. 44 of 125 cents per share, being the final dividend in respect of the year ended 31 December 1986, was declared in South Africa currency payable on Friday, June 5, 1987, to the holders of the shares of the company who are entitled to receive the dividend.

The transfer of shares and registration of transfers of shares must be completed on or before Friday, May 1, 1987, in order to be entitled to receive the dividend.

Holders of shares who are entitled to receive the dividend in respect of the year ended 31 December 1986, should send their request for the dividend to the company's secretary, Messrs. J. H. de Klerk & Co., 40 Commercial Street, Johannesburg 2001, South Africa, by post, not later than Friday, May 1, 1987.

Provision of dividends in respect of each company may, at the request of the shareholders, be given through a bank or other financial institution.

The dividend is payable subject to conditions which can be inspected at the Head and General Office of the company and also at the offices of the company's secretary in Johannesburg and the Union Buildings.

Obituaries

MERCANTILE & GENERAL REINSURANCE CO. PLC
It is with the deepest regret that Mercantile & General Reinsurance announced the sudden death of Philip S. Flint on the 19th April.

Philip Flint joined the M & G in August 1967 and remained in office in August this year after 20 years service. In 1986, he was promoted to the position of Managing Director and had general business connections in Scandinavia and Central Europe.

The funeral takes place at 1 pm, Tuesday 28th April at St Giles Church, Cripplegate.

Swedish Annual Report Index 1987

During 1986, the FFV group has done much to restore its position as one of the leading Swedish industrial companies. The increasing presence of Swedish companies in the international market are major factors in positioning Sweden as a high-tech market for international investors.

The FFV group sells advanced technology. Most of the companies are involved in technically sophisticated operations. C. E. Johansson, for instance, is a world leader in measuring technology and quality control.

In 1986, FFV took another few steps towards its goal of becoming a multi-national industrial corporation. The international thrust of operations was further bolstered by the purchase of two companies in Florida, Aerostrut and Aero Serv, both of which are engaged in aircraft maintenance.

Orders in 1986 reached a record level, SEK 5.2 billion, which is a rise of 7 per cent over the previous year.

Invoicing went up during the year to SEK 4.3 billion which is a 22 per cent increase over 1985.

Group earnings in 1986 amounted to SEK 102 million. Deliveries of defence material accounted for 61 per cent of FFV's revenues, as compared to 65 per cent the previous year. Production of civilian equipment rose from 35 to 39 per cent of the group's sales. This is a planned move on the part of management to shift production towards civilian users.

The FFV group has about 9,500 employees. Head office is located in Eskilstuna, 110 km west of Stockholm.

The FFV group is heavily decentralised and divided into five business areas.

The ordnance group is responsible for production of all military material. The aerotech group is mainly involved in aircraft maintenance. The Telub group deals with service in the computer and electronics industries. The holding group encompasses several companies under development and the development group, which is FFV's "nursery," handles new operations and also includes companies whose activities span the entire FFV group.

THE PROPERTY MARKET By PAUL CHEESERIGHT

Changing the shopping pattern in Gateshead

THE MetroCentre at Gateshead indulges the taste for rhetoric. Claim Number One: "It's probably the finest shopping complex in the world today." Claim Number Two: "It's wilderness shopping." Claim Number Three: "at the end of the day, MetroCentre is all about people." Claim Number Four: "It'll be a white elephant in six years."

One and Three come from the sponsors. Two and Four come from cynical bystanders. But, at any rate, just south of the Tyne, it is there, a factor in any north-eastern economic revival, an influence on shopping patterns in the whole of the region and a case study for a wider argument up and down the country.

This argument is whether the country can at the same time permit developers and retailers to establish major shopping centres out of town and at the same time regenerate decaying city centres.

The Newcastle City Council feared the prospect of MetroCentre and opposed it. Now it has learnt to live with it. "Most Newcastle people wish to see the MetroCentre successful. It's complementary to Newcastle shopping—not a threat," said Tommy Marr, chairman of the City Council. "It's acted as a catalyst for city centre development," commented Bert Moore, leader of the Conservative opposition to the council.

So far there has been six months rivalry between the MetroCentre outside and the Eldon Square shopping centre inside the city and north of the

Tyne. The second phase of MetroCentre opened with the aid of ministerial fanfare last October—over 1m sq ft of retail space. Phase Three will be completed next October, adding a further 833,544 sq ft plus "a leisure box." By then around £180m will have been spent on the development.

Three further phases follow later but will be more concerned with retail warehousing, offices, leisure use and a hotel. The greater number of the shops will be there by the end of Phase Three.

What has happened so far is that most MetroCentre customers have come from the south and the west. The average Newcastle shopper's reluctance to cross the river does not seem to have been severely dented, except, it appears, on Easter Monday when Eldon Square was shut.

John Bryson, the MetroCentre manager, said that in the first three weeks after the October opening, visitors were averaging 500,000-600,000 a week. That settled down to 400,000 in the period to last Christmas, after which MetroCentre re-opened snowbound. After that the numbers crept up to 300,000 a week, broadly on the last Saturday before the Easter weekend, there were about 100,000 visitors and that total was repeated on Good Friday, the opening day of a new bus station and multi-storey car park.

For comparison, the Merry Hill shopping centre at Dudley,

The MetroCentre, Gateshead; indulges the taste for rhetoric

near Birmingham, has reached 80,000 visitors on a good Saturday after an earlier opening but with some 60 per cent of the retail space. And Mr Gordon Allanson, the manager at Eldon Square, believes that the number of MetroCentre visitors is about a quarter of those going to Eldon Square, where, in any case the hours of active trading are more concentrated. Last October the Eldon Square retailers thought that they do well if, in the face of competition from the MetroCentre they could hold reductions in turnover down to 10 per cent. In fact, turnover has

increased. Mr Allanson can monitor this closely because Eldon Square rents are partially geared to sales levels achieved in individual premises. His preliminary calculations, now that Christmas and New Year sales periods are well out of the way, show that the impact of the MetroCentre has been negligible. Sales on average are running around 2 per cent lower than they would have been had the MetroCentre not opened but, in absolute terms, 1986-87 has been higher than 1985-86.

It is not clear so far how

much the visitors to MetroCentre are spending but anecdotal evidence suggests that the big stores are broadly on budget in their sales build-up. Led by Marks and Spencer, many of them trade at Eldon Square anyway. So there is some basis for arguing, not that the city centre has been damaged by MetroCentre, but that more trade has been created.

It is also possible to argue, however, that the city centre retailers have been put at a competitive disadvantage. Newcastle rents are high, rates are often as much again. But the MetroCentre was built on the

back of enterprise zone tax concessions and the retailers there are enjoying a rates holiday. The difficulty for the MetroCentre retailers will come, if they come, when rent reviews fall due. That is roughly at the same time as the rates holiday will end. Against that, it can be argued that the Newcastle retailers and the city centre more generally enjoy an enormous competitive advantage over an attempt to create the amenities of a town centre on a marshy ash dump of an old power station. Newcastle traditionally has been a regional centre, drawing in

John Hall, latest apostle of the North East

By PAUL CHEESERIGHT, PROPERTY CORRESPONDENT

JOHN HALL is head of the family that owns Cameron Hall Developments. John Hall is the man behind MetroCentre. The Northumbrian minor's son is on a high, crowned by the plaudits of the Prime Minister, seen as a North East economic messiah. Unlikely to blush with false modesty, he is in no doubt of his achievements.

Not only is MetroCentre "probably the finest shopping complex in the world today," but "getting new standards in management," but "we've cleared the debt queues on the south bank of the Tyne."

His ideas are as fertile as they are grandiose. The Gateshead Garden Festival—"we're going to make it Expo 90, there'll be 3m to 4m visitors." He has bought the 5,400 acres Lonsdale estate on Teesside—"we're going to make Teesside the gateway to Europe, create 15,000 jobs." He seeks to follow up MetroCentre with MetroFees.

John Hall presents himself as the latest apostle of the North East. The region is "a force to be reckoned with," he says. Now he wants to give the rest of the UK the benefits of his experience, his vision of shopping.

Called in by Color Properties to spur its flagging effort to bring the Sandwell Mall leisure-shopping complex outside Birmingham off the drawing board, he will next week present new proposals to the local authority. He will be trying with other developers at a public inquiry in Exeter in the hope of having another centre there. He is looking at Manchester and Edinburgh.

people from neighbouring towns, and not only for the shopping. There is no comparable centre between Leeds and Edinburgh and Glasgow.

The problem has been to maintain that advantage. The city council, its own transport authority since April 1986, has sought to make access to the centre easier by improved parking and reduced parking charges.

Housing is returning in the central area. Redevelopment of the Tyne Quayside has started. With the old Tyne and Wear structure plan effectively in limbo, the council has relaxed restraints on new shopping and is even promoting its own venture at the Armstrong Centre. Greycoat is to develop new facilities that will link to Eldon Square.

At Eldon Square itself, owned by Capital and Counties and the city council, a £10m expansion is underway to be opened at roughly the same time as Phase Three of MetroCentre will be completed. A £1m refurbishment of the 11-year-old centre has started. But Mr Allanson conceded that the plans "came out in haste because of MetroCentre."

OUTSTANDING VALUE FOR TENANTS AND OWNER OCCUPIERS

An outstanding opportunity exists for forward looking companies to be part of this mixed scheme of high quality office buildings and smaller business units.

Designed by international architects, SSC Consultants, Meridian Gate is situated in the Docklands Enterprise Zone, the most vibrant and advanced of London's Waterfront developments.

Phase One, currently under construction, offers outstanding value for money opportunity for entrepreneurial occupiers to purchase or to rent.

MANAGEMENT

AT FIRST SIGHT it seemed as if the people who wanted to organise a management buy-out of Leyland Bus had lost their senses.

Why would they want to risk their money buying, from Britain's state-owned Rover group a company which had suffered losses of about \$80m in the past three years, the domestic market for which had collapsed — from 3,000 single- and double-deck buses a year to only 300 — and which had developed a relatively poor reputation for service back-up and parts supply?

The management team, led by Ian McKinnon, a 40-year-old Scottish engineer, was not even previously deeply involved in the bus business. The executive moved in from Leyland Trucks half-way through 1985 during yet another management shake-up within the Rover Group. (Because most of them worked at the now-closed Bathgate truck plant in Scotland, they are known as the Bathgate Mafia.)

Yet when there was an approach by UK rival Metro-Cammell-Weymann, the Leyland Group subsidiary which is Leyland Bus's biggest competitor and therefore had every good reason to buy the business, the new Leyland Bus management team decided to make its own bid.

Embryonic ideas for a management buy-out were formed during February 1986 but the team was not able to reach agreement in principle until July and the process of completing the purchase took another six months. Leyland Bus was finally bought from Rover and returned to the private sector on January 13 this year.

Next week McKinnon and his team begin to relaunch Leyland Bus in earnest and are determined to re-establish confidence in the company.

They are starting with a new product, a mid-bus, called the Swift, developed from the Roadrunner medium truck. Leyland Bus believes this will dominate its market niche and McKinnon points out, "provides a good example of the new responsive approach at privatised Leyland Bus."

The management team obviously relishes its new-found freedom. No longer does the decision-making process have to wind its way up and down the chain of command from Bus, to Leyland Vehicles, to the Rover Group board. The speed of management response is now very fast. "We can make important decisions in a day," McKinnon, a ruddy-faced, rugged man, says confidently.

But it took more than the attraction of running their own show to convince the group of hard-nosed executives that Ley-

All geared up for a relaunch

Kenneth Gooding reports on prospects for Leyland Bus following its buy-out

land Bus had the chance of a profitable future.

Their decision was based on several positive factors, the most important of which are:

● That demand in the UK bus market should reach the bottom of the trough this year and then start to recover modestly. Most buses on UK roads will be 15 years old by 1990. By that time all the distortions caused by deregulation of bus services should be out of the way and a clearer pattern of demand established.

● That Leyland Bus's business is, in any case, not entirely dependent on the depressed UK market. McKinnon says the revenue is provided by five different operations in roughly equal 20 per cent chunks. Apart from UK bus chassis supply there is export, rail car production, parts supply from the Chorley, Lancashire, parts distribution centre of Leyland-Daf (recently formed by the merger of Daf Trucks and Leyland Trucks), and also from Leyland Bus's four wholly-owned depots.

● That the company inherited an up-to-date product range and will not have to spend heavily on new products for another three or four years.

That the UK Government provided the money for the Rover Group to wipe out Leyland Bus's accumulated debts and pay for further rationalisation at a total cost of \$55m.

McKinnon says the government money enabled the management team to restructure the business "for the market as it is today." The principal elements of this have been cuts in production capacity and a reduction of the workforce from over 5,000 to about 1,200.

Production has been pulled back into the two factories: Workington, once famous for making the National Bus vehicles but which now depends heavily on making rail cars and also produces its own range of Lynx single-deck bus and Royal Tiger luxury coaches; and Farlington in Leyland where the double-deck chassis are made as well as the new mid-bus and gearboxes, axles and suspension systems.

The headquarters has also been moved to Farlington. Details of the restructuring and the buy-out were passed on to the 1,760 employees who were called together in small groups.

"There has been a real change in attitude," McKinnon says. "The employees have really come to the party. They know there is now no safety net if the company is not profitable."

Leyland Bus has signed a two-year deal with the unions which is revolutionary by previous standards. It offers no new money in the first year — only genuine productivity pay-

ments — and 3 per cent in the second year.

McKinnon claims the deal allows for much more flexible working, including changes in working hours, changes in demarcation and "bell to bell" working.

Employees also will have "a genuine chance to share in the success of the company," he points out, because 16 per cent of the equity of the new holding company has been set aside for them.

The directors — McKinnon, George Newburn, 44, responsible for manufacturing operations; Eric Turner, 40, finance and systems; John Kinnear, 50, service; James McKnight, 46, product development; and David Quinlan, sales and marketing — and Bankers Trust, which provided a \$5m term loan for the buy-out, have 73 per cent between them.

The remaining 12 per cent is being held in reserve. Some will certainly go to Lancashire Enterprises, the job-creation company funded by Lancashire County Council, which has already helped Leyland Bus put together a \$10m retraining package which has attracted money from the European Social Fund.

There is also expected to be some cross-holding of shares between Leyland Bus and DAB, Rover's wholly-owned bus assembly company in Denmark.

which is also soon to be the subject of a management-led buy-out.

To top up the \$5m from Bankers Trust, overdraft facilities are being provided by the Bank of Scotland.

McKinnon says the new management plan assumed that the re-vamped Leyland Bus should be profitable from the outset and have a positive cash flow.

So far things are going better than the highly conservative forecasts suggested. Production is 20 per cent above forecast because within the past month Leyland Bus won an order for 110 Olympian double-deckers from Kowloon Motor Bus, the largest bus operator in Hong Kong and a big slice of that in competition with BREL (British Rail Engineering) and Metro-Cammell-Weymann. "So far we have only nibbled at the rail car business," McKinnon suggests.

The diversification plans show clearly that the management team is not preoccupied with buses. McKinnon says this was one aspect of their proposals that appealed to Bankers Trust when the team asked for money. "We regard Bankers Trust's confidence in our plans as being of the greatest importance. Banks are hardly charitable institutions and Bankers Trust has only supported us because it believes we can succeed."

quickly and any one outstanding for more than 20 days will be the subject of a special meeting which he will chair.

There are about 80,000 Leyland buses on the roads around the world, generating lucrative spare parts business. The Leyland-Daf spare parts distribution and warehousing operations at Chorley, Lancashire, will continue to work for Leyland Bus under an exclusive three-year arrangement tied to certain agreed performance criteria.

This is one of a series of deals with Leyland-Daf, the Netherlands-controlled company recently formed by the merger of Daf Trucks and Leyland Trucks. Service agreements cover such things as the continued use of the Leyland technical centre, medical centre, apprentice training facilities, payroll, mains services and, for the moment, export financing support.

Daf, Leyland-Daf's parent group, also says it will not start any new business in the UK, although it will continue to import built-up coaches.

As for the production plants, McKinnon says some of the bus body-building operations which were carried out at the Eastern Coachworks factory in Lowestoft, Suffolk, closed down early this year, might be switched to the Farlington plant.

He also hopes to diversify a little more by winning subcontract work for the highly-flexible machining operations at Farlington which he says could be used for Ministry of Defence work.

The Workington plant has just delivered six months ahead of the competition a 23-metre, advanced diesel, two-car rail unit as part of an order for 70 cars by British Rail for delivery by April next year.

"This business is essential to Workington," McKinnon points out. British Rail wants 230 rail cars worth \$100m to be delivered by the middle of 1988 and Leyland Bus is going for a big slice of that in competition with BREL (British Rail Engineering) and Metro-Cammell-Weymann. "So far we have only nibbled at the rail car business," McKinnon suggests.

The diversification plans show clearly that the management team is not preoccupied with buses. McKinnon says this was one aspect of their proposals that appealed to Bankers Trust when the team asked for money.

"We regard Bankers Trust's confidence in our plans as being of the greatest importance. Banks are hardly charitable institutions and Bankers Trust has only supported us because it believes we can succeed."

Non-executive directors

The noble bear takes issue with the noble lord

An alternative view

CONTROVERSY INvariably surrounds the subject of non-executive directors in the UK, as the mixed reaction to the proposals published this week by the Pro-Ned (Promotion of Non-Executive Directors) organisation indicates. But to bring the illustrious Paddington Bear into the argument, as Lord Erroll did in his article on this page on April 8, is apparently beyond the pale. A reader, signing herself "Alice," has leapt to the noble bear's defence.

I MUST protest most strongly at the scurrilous article by Lord Erroll of Hale, entitled "Beware the Facile Panacea." Who is this Lord Erroll fellow, anyway, and what does he really know about the essential Paddington Bear?

I am a member of a well-known bank in the City and we have our own Paddington Bear, whose reputation I now seek to defend.

Lord Erroll states that "a Paddington Bear can sit unnoticed in a boardroom, eating his lunch..." This is hardly likely, if for no other reason than that he would undoubtedly be munching his way through a mound of marmalade sandwiches while all the other non-executive directors would be tucking into the pate de foie gras, and if this had escaped their notice then they should jolly well have been turned out years ago for lack of observational powers.

And as for "if a serious division of opinion develops, he is ignored, or he sides meekly with those who look like winning the argument" — well, all I can say is that Lord Erroll could not have made an in-depth study of the body language of a Paddington Bear or he would have observed that behind the jovial, seemingly placid exterior, there is a steely backbone which enables a Paddington Bear invariably to get his own way without appearing to do so.

Needless to say, we had, until recently, our own White Rabbit and we still have our own Dormouse, at present slumbering peacefully in one of our overseas offices. I have no doubt that Lord Erroll would completely misinterpret a White Rabbit's clock-watching, which is, in fact, an expression of his urgent desire to "get on with marketing his excellent carrots" and not an indication that he wishes to hurry home to mow the lawn. And it is also patently clear that Lord Erroll, in his article, would never appreciate a Dormouse's laconic sense of humour and the fact that his "vexed" snoozes are designed to lull everybody into a false sense of security while he is, in fact, taking in everything that is going on.

Let there be, indeed, a charter for Paddington Bear directors — and one for White Rabbits and Dormice. Perhaps, then, misfortune would strike public companies less often and share prices would rise instead of plummet.

THE ARTS

Arts Week

F S Su M Tu W Th
24 25 26 27 28 29 30

Exhibitions

WEST GERMANY

Bonn, Städtisches Kunstmuseum, Rathausgasse 7: A retrospective by August Macke (1867-1914). Born in Meschede, Macke studied in Düsseldorf and Berlin under Lovis Corinth. He did much of his work in Bonn, and was responsible for a new art form Rheinische Expressionisten, before the First World War. His journey in the spring of 1914, to Tunis became a landmark in art history. In the same year he was sent to the front in France, where he died, aged 27, in action in Champagne. Ends May.

Düsseldorf, Kunstmuseum, Ehrenhof 5: From Raphael to Beyer. This exhibition displays 55 Italian baroque and renaissance drawings from the museum's permanent collections, as well as paintings by 19th and 20th century German artists. Ends May 17.

PARIS

French drawings: At the beginning of the 18th century Louis XIV's love of the grandiose gave way to an art more intimate, more pleasing. A new generation of artists around Antoine Watteau introduced colour as well as a lightness of touch into

their drawings under the influence of Venetian and Flemish masters. Musée du Louvre, Pavillon de Flore. Closed Tue. Ends June 1. (4280 3028).

Rembrandt: The exhibition of 341 engravings is exceptional for the proofs showing the stages of Rembrandt's creative process and his imaginative presentation. Landscapes, genre scenes, portraits and auto-portraits and biblical scenes testify to the diversity of inspiration and the technical mastery of the painter who was the first to consider engraving as a autonomous artistic expression. Bibliothèque Nationale, 58, Rue Richelieu. Ends May 3 (4793 8120).

Denise Buren. Having acquired fame with his controversial columns in the Palais Royal gardens, Buren, obsessed with vertical stripes, has taken over the exhibition space of the Musée des Arts Décoratifs. The stripes cover everything from a specially erected staircase to china plates and their dressers, from walls to television screens. The colour of the stripes may vary, but the inspiration does not - and the initial surprise turns quickly into a long drawn-out tedium. Musée des Arts Décoratifs, 107 rue de Rivoli (4280 3214). Ends Apr 26.

Tunis, The Gold of the Pharaohs: Part of a dazzling treasure from the tomb of the pharaohs of Lower Egypt is on view in the Grand Palais Gold, silver and lapis-lazuli funerary masks, pectorals and ceremonial items were discovered in the late 1930s in the delta of the Nile, in Tunis, the capital of a country torn by internal strife. Yet the relative impoverishment seems to have inspired the royal craftsmen with an elegance whose near-classical restraint appeals to modern sensibility. Grand Palais, closed Tue. Ends July 20 (4289 5410).

Hommage to President Georges Pompidou: Echoing the celebrations of the 10th anniversary of the Centre Georges Pompidou, Artcurial presents 100 contemporary artists around a nucleus of paintings, draw-

ings and sculptures which belonged to the late President. The great names of the then avant-garde in his own collection, the furniture he chose for the Elysee Palace, all testify to the impulse this Homme de Culture gave towards modernity - and his enjoyment of it. Artcurial, 9 Ave. Matignon. Closed Sun and Mon. Ends Apr 30 (4290 1810).

Costume-Couture. Where better to stage an exhibition on clothes and their sociological significance than in Paris, whose very name is synonymous with fashion? The imaginatively presented exhibition ranges from the breeches and tunics of ancient Gauls to the rare exhibits from the 18th century - le Habit Français - and to Edith Piaf's legendary little black dress. Grand Palais (Closed Tue, Wed late closing) ends June 15 (4280 5410).

SPAIN

Madrid, Diego Rivera. A retrospective 20th century top exponent of Mexican art, this show offers a complete collection of his works, including a film with his fresco murals, 100 oil and tempera paintings, 110 book illustrations. Centro de Arte Reina Sofia, Santa Isabel 52. Ends June 7. (4280 3214).

Madrid, a Frank Auerbach retrospective. 40 oil paintings by the German artist who moved to the UK in 1939 and is an exponent of the figurative expressionist tradition. This show, sponsored by British Council, was recently seen in Hamburg and Essen. Centro de Arte Reina Sofia, Santa Isabel 52. Ends June 1.

Madrid, Julio Gonzalez (1876-1942). About 30 pieces made by the Spanish sculptor, mostly from the 1920s, his most creative and fruitful period, and some paintings of 1953-57. Works exhibited are numbered copies, but some are of superior quality to those made by the artist. Mostly in bronze and on steel. Galeria Thon, Marques de la Ensenada 2. Ends Apr 25.

Madrid, Robert Motherwell. American abstract expressionist, offers 40

paintings. Juana Mordo Art Gallery, Villanueva 7. Ends Apr 31.

Madrid, Homage to Manuel Vela (1919-87). One of the relevant members of Madrid's Art movement El Paso in the 50s, an informal movement of marked expressionist character to which the artist gave some humour. Juan Cris Art Gallery, Villanueva 22. Ends May 4.

LONDON

The Tate Gallery. Turner in the new Clore Gallery. The Turner Bequest, which amounts to nearly 300 oil paintings, finished and unfinished, and a further 19,000 or so watercolours and drawings, has been a source of controversy and discussion ever since it came into the nation's hands more than 130 years ago. Turner had always wished for a gallery to himself which would show all aspects of his work. Whether he would have approved of James Stirling's extension to the Tate as a suitable setting is a nice question. The larger paintings may be hung too low for one who lived in a more ostentatious age, and the tasteful ostentatious setting has decreed for the principal galleries is a far cry from the rich plum he is known to have preferred. The vulgar neo-deco of the entrance hall has little to recommend it. But eight rooms for paintings and one for watercolours give room enough, and with the three reserve galleries upstairs, every painting but the few in restoration or on loan is on the wall.

ITALY

Venice, Palazzo Grassi: The architect's effect: a curious and stimulating exhibition centred on the neglected 18th century Milanese mannerist painter, Giuseppe Andreola. Much appreciated in his own lifetime for his extraordinary composite portraits, in which the features of the sitter would be composed of the tools of his trade - Pots, pans and vegetables for the cook (which

turned upside-down becomes merely a still-life) or books for the librarian - Andreola spent most of his working life outside Italy, in the service of three Hapsburg emperors. Included is his arresting portrait of Rudolf II as the Etruscan god Vertumnus, made up of fruit, vegetables and ears of corn. The exhibition contains works by Andreola's predecessors, such as Leonardo, Dürer and Bosch, as well as those of artists active in the early years of the 20th century. It attempts to draw links - some obvious (Dali, de Chirico, Mass Ray and Duchamp). Ends May 31.

Milan, Pinacoteca di Brera: Impressionist Paintings from American Museums - 47 works from the splendid collections held by the Metropolitan Museum in New York and the National Gallery in Washington. Includes works by Rodin, Cézanne, Corot, Degas, Van Gogh, Monet, Pissarro, Renoir and many others. Ends May 18.

Rome, Palazzo Braschi (Piazza San Pietro): Luis Ducas (1748-1810): Italian landscapes as the time of Goethe. Delightful exhibition of watercolours and coloured engravings (from the Ducal Museum in Lucca) of the monuments and places of the gardens of Rome and those sites around which would have figured in any self-respecting eighteenth century grand tour. Ends May 31.

Rome, Palazzo Braschi: The architect's effect: a curious and stimulating exhibition centred on the neglected 18th century Milanese mannerist painter, Giuseppe Andreola. Much appreciated in his own lifetime for his extraordinary composite portraits, in which the features of the sitter would be composed of the tools of his trade - Pots, pans and vegetables for the cook (which

turned upside-down becomes merely a still-life) or books for the librarian - Andreola spent most of his working life outside Italy, in the service of three Hapsburg emperors. Included is his arresting portrait of Rudolf II as the Etruscan god Vertumnus, made up of fruit, vegetables and ears of corn. The exhibition contains works by Andreola's predecessors, such as Leonardo, Dürer and Bosch, as well as those of artists active in the early years of the 20th century. It attempts to draw links - some obvious (Dali, de Chirico, Mass Ray and Duchamp). Ends May 31.

Milan, Palazzo della Triennale: Imaginary Cities. A Journey Through Italy and Nine Projects for Nine Cities. An exhibition in two sections. Nine groups of young architects, Italian and foreign, examine the history and development of cities as diverse as Rome, Naples and Turin. In the second, they make imaginative suggestions for the future.

Barcelona: The English Chamber Orchestra conducted by Enrique Garcia Asensio with pianist Josep Colom: Schumann, Mozart, Cerezo, Haydn (Tue). Same orchestra accompanies soprano Carmen Bustamante and Nancy Argenta, tenor Howard Crook, bass Luis Alvarez and Coral Artistic Escorial de Montserrat conducted by Edmon Colomer: Mozart's Prague Symphony and Mass in D minor (Wed), Palen de la Musica Catalana, Amadeo Vives 1.

Madrid: Philharmonia Hungarica conducted by Pedro Alcala: Prokofiev, Brahms. Teatro Real, Carlos III (Thurs).

ITALY

Ferrara, Teatro Regio: music by Gerhart Hauptmann, accompanied by Jonathan Morris (Fri), (Box Office: 79 86 76).

Rome, Teatro Comunale: Riccardo Muti conducting Beethoven's Symphony No. 1 and Prokofiev's Romeo and Juliet Suite (Mon), (Box Office: 80 91 20).

Florence, Teatro Comunale (Maggio Musicale Fiorentino): The Ching Trio playing Mozart, Mendelssohn and Brahms (Wed), (Box Office: 277 9230).

PARIS

Alfred Brendel, piano recital: Schubert (Mon), Salle Pleyel (4563 0766).

Teresa Zylis-Gara, soprano, Christian Valdi, piano: Bachmann, Tchaikovsky, (Tue), (212 8100).

Kovachy, Szymanowski, Dvorak (Mon), Théâtre de l'Athénée (4742 5727).

Orchestre National de France conducted by Karl Anton Rickenbacher with Helene Garrett, David Randall: Haendel, Landow (Tue), Théâtre de la Ville (429 1516).

Novel Orchestre Philharmonique conducted by Gabriel Chmura, Olivier Charlier, violin: Smetana, Khatichian, Dvorak (Wed), Radio France, Grand Auditorium (4294 1516).

Essential Polyphonique de Versailles. Orchestre Français d'Oratorio conducted by Jean-Pierre Loe: Mozart - Coronation Mass, Handel - Te Deum (Thurs), Saint-Roch Church (4261 9328).

London: Nish Ensemble, A. Rolfe Johnson, tenor: Rossini, Warlock, Gounod, Faure (Thurs), Musée d'Orsay (4440 4814, ext 4380).

VIENNA

Classical Concert conducted by Rene Clemencic. Italian music from the 17th century. Musikverein Brahms, Sal (55 81 90) (Fri).

Essential Polyphonique de Versailles. Liszt and French Renaissance music. Volkstheater (Fri).

Vienna Hofburg Orchestra conducted by Gert Hofbauer. Waltzes and light opera music. Konzerthaus Mozart Saal (72 13 11), (Sat, Thurs).

TOKYO

The Quartet: Beethoven, Brahms, Bartok, Alban Berg, Shostakovich (Mon), (353 2242).

Japan Philharmonic Orchestra, conducted by Naoto Ohnishi, with Hiroko Nakamura, piano. Chopin, Mozart, Schubert, Liszt, Alkan (Wed), (224 5911; 237 9900).

Traditional Japanese music: Koto and other traditional instruments in recital of music with spring and cherry blossom themes. Dai-ichi Seimei Hall, Bihoku, near Ginza and major hotels (Tue), (212 8100).

Opera and Ballet

ITALY

Milan: Teatro alla Scala: Giuseppe Paganini conducts Puccini's Il Tabarro, directed by Sylvano Bussotti, with Eleonora Jankovic, Milena Pauli, Piero Capponcelli and Nicola Martinucci, and I Pagliacci in Franco Zeffirelli's production. The costumes are by Anna Anni, and the cast includes Jose Carreras, John Rasmussen, Daniela Dessi and Angelo Bonneri (Fri, Wed, Sat, Sun, Tues, Thurs). Tickets: 100,000, 100,000, 100,000.

Teatro Lirico: Three Ballets: Sorelle by Balanchine, Laide by John Butler, danced by Carla Fracci and George Janna, and Maurice Delage, danced by Luciana Scavone (Fri). Box Office: 88 84 18.

Rome: Teatro dell'Opera: Mozart's Il Nozze di Figaro conducted by Gustavo Kuhn and directed by Alberto Fassini (based on the Visconti version, with his sets and costumes). The cast includes Anne Sophie von Otter, Alessandro Corbelli, Adeline Scrambelli and Claudio Desderi (Wed). Box Office: 48 17 88.

WEST GERMANY

Berlin, Deutsche Oper: Tosca with a new cast led by Nelly Miricioiu and Neil Shifford. Rigoletto, produced by Hans Neuenfels, with Barbara Vogt. Also Giselle with Eva Svobodkova dancing the title role.

Kassel, Staatstheater: Carmen stars Theresa Bergmann and Rigoletto Lucia Aliberti. Francisco Ariza, Leo Nucci and Harald Stamm. They are joined by Margaret Price and Franz Grundheber in Don Carlos.

Frankfurt Opera: Michael Halasz conducts La Bohème with Yoko Watanabe, Alberto Cupido and Paula Page. Ruth Berghaus' production of Götterdämmerung stars Cetera Legendre, June Card, William Cochran and Manfred Schenk. Anja Silja, Barbara Bonney and William Cochran sing in Fidelio, and La Nozze di Figaro returns to the repertoire.

SPAIN

Madrid: Don Pasquale by Donizetti with Enzo Dara, Enric Serra, Yoshina Yamaji, Ennodia Llarra, Santiago Gerion. Teatro de la Zarzuela, Jovellanos 4 (Tue, Thurs). Chit Chat - ballet by Patricia Bardi (Tue to Thurs) and Cia Madrid Danza Contemporánea "Wides on a single leg" (Mon, Wed, Thurs). Circulo de Bellas Artes, Alcala 42.

Barcelona: Mozart's Lucio Silla with Edo di Cossu, Jenny Drivalva, Rafael Pierotti and Julia Courvel conducted by Julius Rudel. Gran Teatre del Liceu, Sant Pau 1 (Thurs).

PARIS

Elektra conducted by Kent Nagano with Helen Dargatzis, Gwyneth Jones and Cheryl Studer alternates with Maguy Marin's ballet Les Femmes de Tenebres to Couperin's music conducted by William Christie in which light is created out of chaos and darkness. It is followed by Lazzini's La Fille Mal Gardée in a refreshing pantomime version. Paris Opera (4286 9623).

Specialized GROUP - Groupe de Recherche Chorégraphique de l'Opéra de Paris produced contemporary creations with one including even the Orchestre National de Jazz at the Opéra Comique (4286 0611).

Fine: Bussotti and the Wuppertal Tanztheater reveal through remorseless questioning the essential in man in two alternating programmes: Gebirge and Kontakhot. Théâtre de la Ville (4274 2277).

VIENNA

Staatstheater: Rosalka conducted by Neumann with Bechova-Cap, Randova, Sasaki, Sina, Hiltnermeier (Fri); Daphnis and Chloë conducted by Zagrosk with Seyfried, Over, Karl, Totzler; The Firebird conducted by Zagrosk with Jasja, Nowak, Tichy, Wilhelm; both Sat, Mon, Tues and Thurs conducted by Stein with Jones, Lipovsek, Versalle, Salminen (Sun), Andrea Chénier conducted by Kobucar with Sinaia, Beckanova-Cap, Yachni, Lillava (Tue). La Traviata conducted by Zedda with Ghazarian, Wimmer, Gonda, Lima, Zancanaro (Wed) Die

Propensee by Balor, and Wieselthaler - Tosca by R. Strauss conducted by Rolf (Fri), (51 444 28 59).

Volkoper: Der Betstudenent conducted by Bauer-Thomel with Motil, Steinisky, Schmidt, Juster (Fri). Die Cardistras conducted by Bill with Motil, Bae, Baeck (Sat); Madama Pompadour conducted by Bibl with Ramm, Burger, Loewinger. (Sun) Die Weise von Liebe und Tod der Carmine conducted by R. Strauss conducted by Mikrandorfer with Eder, Bokor, Rudifera, (Mon). Die Entführung aus dem Serail conducted by Parik with Scep, Anneria, Wieselthaler. Der Zigeunerbaron conducted by Arntmeier with Banz, Hilday, (Wed). Hoffmanns Erzählungen conducted by Bernat with Eder, Kartel, Radet, (Thurs), (51 444 28 57).

NEW YORK

City Center: Paul Taylor Dance Company includes revivals of Dust, Images, Polaris, and Profiles along with a new work choreographed for the first time by Taylor to music by Mark Ends May 17, 80th & 7th Av (248 8889).

LONDON

English National Opera, Coliseum: two versions of the Don Juan legend play side by side at the Coliseum this week. The new production, Don Giovanni, returns in Jonathan Miller's uneven but lively production, with William Shimell in the title role. Dargomyzhsky's The Stone Guest, a crucial work of Russian operatic history joining the British repertoire for the first time, has Keith Warner as producer. Paul Daniel as conductor, and a cast including Graham Clark, Kathryn Harries, Sally Burgess, and Neil Howlett. The new production by David Alden of Simon Boccanegra is surreal, funny and uninteresting, but the singing by Jonathan Summers, Gwynne Howell and Janice Cairns and the Verdi conducting of Mark Elder go a long way toward making amends.

Royal Opera House, Covent Garden: Sadler's Wells Royal Ballet presents The Sleeping Beauty (Sat mat and eve, Wed) and a triple bill (Mon). Watch for Merrill Ashley, a superb New York City ballerina, on Sat mat.

Sadler's Wells, Rosebery Ave: The London Festival Ballet ends a week's season at the weekend with a triple bill, including two works new to London. The Philobolus Dance company starts a season on Tuesday.

NETHERLANDS

Amsterdam, Muziektheater. The National Ballet with Frederick Ash-tal's Cinderella (Tue, Thurs), (255 455).

The Netherlands Dance Theatre tour with The Unsung (Limou) and 'Historie du Soldat' (Kyllan/Stravinsky). Tue in Enschede, Schouwburg (11 11 22). Wed in Nijmegen, Schouwburg (22 11 00). Thurs in Scheveningen, Circus Theatre (25 89 00).

TOKYO

La Tragedie de Carmen: Peter Brook's renewed original production. The Peter Brook Company directed by Brook has been chosen to open Tokyo's newest theatre, the Giza Salon. By eliminating the usual opera fillers and distractions, concentrating on the main characters and convincing acting and relegating the (conductor-less) orchestra offstage, Peter Brook's version ensures that nothing interferes with the drama and realism. In the five years during which this Carmen has been seen in Europe and the US, Japan has campaigned for its performance here. But Brook rejected every suggested venue. This unlikely modern theatre was accepted because of its flexibility. The newest cultural jewel of the Giza Salon is so deceptively converted into an arena space, complete with red sand floor and plain high walls that it has been made to look like Brook's Paris home, the famed, gutted Théâtre des Bouffes. Other innovations include the civilised 7.30 (8.00 at weekends) start and restaurants for after-theatre dining. Giza Salon Theatre (555 0552; 890 8888).

Seawaves, Circus Theatre. Kathak dancers from India (Wed), (55 89 00).

Seawaves, Circus Theatre. Kathak dancers from India (Wed), (55 89 00).

Democrats
gather steam

THE US STANDS at a quite extraordinary state in its contemporary political life. Eighteen months before the next presidential election neither major party has an heir apparent or even a clear-cut favourite to succeed President Reagan. Nor do any of the multitude of pundits have much idea who will run against whom next year. Compounding the problem, the Democratic Party has new primary rules which may render academic previously tried tactical methods. Not since 1961 has the presidential contest been so open at this stage and even then most short-lists of pretenders were much shorter than the number of declared and latent candidates that exist today.

Nominal leader

All that can be said with certainty at present is that the divisions inside the Republican Party between the centre and the right are more sharply defined and much less subtle than those inside the Democratic Party. The only other predictable is that the state of the economy, and the prescriptive policies that will be put on display, will weigh heavily with the electorate. Virtually the Republican Administration seems currently bereft of ideas and that the Democrats in Congress are intent on asserting themselves. The major policy interest now centres on the party which does not inhabit the White House.

The rights of
shareholders

AS A matter of principle, shareholders' rights deserve to be supported. Aggressive corporate treasurers and rule-bending investment bankers tend to have too much of their own way. But it is more debatable whether pre-emption rights should be the main battleground.

UK company law protects shareholders' rights, notably in the area of issuing new equity. But in practice, it is often difficult to allow some flexibility in capital creation through annual shareholders' resolutions. Usually there is a 5 per cent "headroom" in the share capital which can be issued without calling a special shareholders' meeting.

Last year there were arguments over some big domestic vendor placements which breached these limits. In the end an agreement was patched together whereby they would be accepted subject to a "clawback" clause. Shareholders could claim their appropriate proportion of the newly issued stock.

International dimension

Now the controversy has acquired an international dimension. Investment banks have discovered the global equity market and want to make placings of attractive equities such as Fisons and Barclays Bank in the US, Japan and elsewhere.

In these foreign markets the clawback formula cannot apply. The British institutions have suddenly woken up to what is going on, and several planned overseas placings such as for Fisons and Seaser have had to be abandoned or sharply reduced in size because of institutional threats to block the required increases in authorised capital. Curiously, convertible Eurobond issues which breach the 5 per cent limit seem to arouse fewer objections than straight equity offerings.

In this situation, much humbug is being talked by merchant banks which have bent the limits and attracted an institutional backlash.

Lucrative commissions are attached to these international equity offerings, and it is understandable that the loss of both face and fees is irksome. But

THE longer this row continues, the more likely we are to see an outsider emerge as a compromise candidate. That is how a senior executive recently summed up the battle for Compagnie Generale de Constructions, Telephoniques (CGCT), the French public exchange manufacturer which controls 10 per cent of the domestic market. Yesterday, the outsider, Ericsson of Sweden, duly won knocking out the two warring contenders, American Telephone and Telegraph of the US, and Siemens of West Germany in an eleven-hour decision that had politics written all over it.

Both Ericsson and the French authorities were yesterday emphasising the virtues of the Swedish company's switching technology. But the fact remains that the French decision is a neat solution to an industrial confrontation which was threatening to embroil the US, France and West Germany in a retributory battery of trade embargoes.

It is possible that elements of this trade war will rumble on for some time. But it is difficult to escape the conclusion that the French have effectively sidestepped the main complaints of the Americans over the sale of CGCT. AT&T had objected to the way in which the negotiations were conducted on the ground that the French Government was leading towards a deal with Siemens as part of a European market-sharing deal that would exclude the American Siemens would receive CGCT and a stake in the French market in return for the recent takeover agreement which allowed Alcatel of France to capture a significant slice of the West German public switching market through the acquisition of ITT's telecommunications business.

To back up these objections, the US Federal Communications Commission, the industry's regulatory agency, threatened to block Siemens' expansion in the American market. But since Siemens has not won in France, it is hard to see how it can still be regarded as an enemy.

"The Americans may be upset but not as upset as they would have been if Siemens had been chosen," says Francis McInerney, an analyst with Northern Business Information in New York. "This is very good news for them."

Ericsson has therefore emerged victorious partly by being a neutral in a political

ERICSSON'S success in winning control of a hotly contested share of the French telecommunications market is a key strategic move.

Although among the top suppliers of the most advanced telecommunications equipment, Ericsson's traditional strength has been dispersed among dozens of Third World markets.

"Ericsson wants to move into First World markets and France is an excellent place to go," says Francis McInerney, an analyst with Northern Business Information in New York. "This is very good news for them."

France in 1985 accounted for 12 per cent of a \$3bn (\$1.8bn) European market for large telephone switch-

ing equipment, and will be worth a tenth of a \$2.4bn market in 1990, according to estimates by the market research company Datateq.

Ericsson has about a fifth of the Italian market and 16 per cent of the UK market. "Ericsson has now become a European strength," says Datateq's Ed Mier.

"It is consolidated across Europe."

The company says it has placed 900,000 lines of its flagship AXE digital switch in service in France, under deals made before 1984. It will now supply upgraded versions of the AXE switch to use of CGCT's other-technology machines.

"We will train the people in CGCT to use the AXE," the company says.

Ericsson has been widely speculative in the Far East, while the Pru has ploughed in and out of the risky futures markets.

At least one of the teams has ducked to the straight and narrow. Bell Lawrie is lagging behind the rest of the field but has stuck to its guns by managing the portfolio in the same way as it would for any other private equity fund.

Prudential Unit Trust Managers, which put up the starting stakes, is game for another race next year. And so is Bell Lawrie.

Riding high at the top of the best-seller list in Kuala Lumpur for the past few weeks has been Jeffrey Archer's "A Matter of Honour." It could, of course, be just a coincidence that the novel's runaway success has come during the most bitterly fought political struggle in recent Malaysian history but the Tory Party might feel more than a passing sympathy for the victims of the campaign's excesses.

The battle for the presidency of the United Malays National Organisation carries with it the prize of Prime Minister. The incumbent for the past six years, Dr Mahathir Mohamad, (of the "Buy British" fame), is being challenged by past and present Cabinet colleagues not just for his job but for control of the entire party machinery. The mud-slinging has been fast and furious, and the photocopying machines have been running hot, turning out the anonymous poison-pen letters

which characterise Malaysian elections. Allegations of fraud, corruption, nepotism, marital disharmony and bizarre sexual deviations abound, while the candidates themselves emphasise their commitment to national unity and the search for consensus.

Mahathir's aides, confident of victory, promise that heads will roll after the result is announced today. But they will also be magnanimous in their hour of triumph. "When the Malaysian national soccer team goes two goals down, everyone knows there is no chance that they will fight back," said one of the Prime Minister's key supporters. "It is the same with these people challenging Dr Mahathir. They will be finished, so we would not rub it in."

But the only certain victor is the legal profession. Writers for libel are being thrown around like confetti. For the lawyers, the end of the campaign can only bring a deep sense of loss.

The Ericsson/CGCT deal

An inspired piece of
commercial politics

By Terry Dodsworth and David Thomas

The mud-slinging has been fast and furious, and the photocopying machines have been running hot, turning out the anonymous poison-pen letters

which characterise Malaysian elections. Allegations of fraud, corruption, nepotism, marital disharmony and bizarre sexual deviations abound, while the candidates themselves emphasise their commitment to national unity and the search for consensus.

Mahathir's aides, confident of victory, promise that heads will roll after the result is announced today. But they will also be magnanimous in their hour of triumph. "When the Malaysian national soccer team goes two goals down, everyone knows there is no chance that they will fight back," said one of the Prime Minister's key supporters. "It is the same with these people challenging Dr Mahathir. They will be finished, so we would not rub it in."

But the only certain victor is the legal profession. Writers for libel are being thrown around like confetti. For the lawyers, the end of the campaign can only bring a deep sense of loss.

Ericsson has been widely speculative in the Far East, while the Pru has ploughed in and out of the risky futures markets.

At least one of the teams has ducked to the straight and narrow. Bell Lawrie is lagging behind the rest of the field but has stuck to its guns by managing the portfolio in the same way as it would for any other private equity fund.

Prudential Unit Trust Managers, which put up the starting stakes, is game for another race next year. And so is Bell Lawrie.

ERICSSON has been widely speculative in the Far East, while the Pru has ploughed in and out of the risky futures markets.

At least one of the teams has ducked to the straight and narrow. Bell Lawrie is lagging behind the rest of the field but has stuck to its guns by managing the portfolio in the same way as it would for any other private equity fund.

Prudential Unit Trust Managers, which put up the starting stakes, is game for another race next year. And so is Bell Lawrie.

Riding high at the top of the best-seller list in Kuala Lumpur for the past few weeks has been Jeffrey Archer's "A Matter of Honour." It could, of course, be just a coincidence that the novel's runaway success has come during the most bitterly fought political struggle in recent Malaysian history but the Tory Party might feel more than a passing sympathy for the victims of the campaign's excesses.

The battle for the presidency of the United Malays National Organisation carries with it the prize of Prime Minister. The incumbent for the past six years, Dr Mahathir Mohamad, (of the "Buy British" fame), is being challenged by past and present Cabinet colleagues not just for his job but for control of the entire party machinery. The mud-slinging has been fast and furious, and the photocopying machines have been running hot, turning out the anonymous poison-pen letters

many of these discussions and the CGCT decision could actually make the company more, not less likely to seek alliances as Ericsson may find it difficult to make money quickly out of CGCT.

"The CGCT decision will have no negative implications for discussions about alliances. If anything, Ericsson will be looking for support from other European partners," Mr David Day, managing director of Plessey telecommunications said yesterday.

These alliances may not necessarily come in public exchanges — that market in Europe is gradually closing. Siemens and Alcatel between them share the German market; GEC, Plessey and Ericsson supply British Telecom; and now Ericsson will divide the French market with Alcatel.

But as one industrialist said yesterday: "We are not just talking about switches any more." Sales of transmission equipment, terminals, and add-ons are growing in importance, and would well be the sort of products on which alliances are built.

Indeed, as a result of huge modernisation programmes launched by many telecommunications operators, sales of public switches are set to decline in many markets. In France, revenues from public exchanges are likely to fall from \$570m (\$227m) in 1985 to \$535m this year and to \$240m in 1990, according to Datateq. Declining sales, high development costs and extra competition is bound to put pressure on prices and profits.

Yet public switching remains at the heart of the telecommunications equipment business — which helps explain why the acquisition of a relatively small French switch manufacturer sends ripples through the whole industry. This focus is partly for sound commercial reasons: there is no better entry card to a telecommunications operator than the sale of a public switch. A manufacturer is usually able to follow up with the sale of a host of subsidiary equipment.

But it is also partly for emotional reasons. "All telecommunications equipment manufacturers have an element of machismo and selling public switches is the most macho thing you can do in this business," one insider explained yesterday.

Or is another senior equipment manufacturer put it: "The telecoms world is full of people who go on with projects that rational people would say are not worth the candle."

An ill-starred expansion in 1983 into home information systems resulted in three years of steep losses. Profitability in the company's public telecommunications sector, its chief business, has been under pressure because of the development costs on the AXE and highly competitive markets.

However, the company restricted its losses last year, and an upturn seemed under way by the second half. For the year, profits rose slightly. Also its costly drive to penetrate the US market is finally paying off. After months of pursuit, Ericsson has secured a \$30m sale of AXE switches to US West. More deals are believed imminent.

Jane Rippeteau

Prior's call
of duty

GEC chairman, James Prior, made a startling discovery at the company's telecommunications factory at Ayrville, Co. Durham yesterday.

Staff were proudly displaying some of the company's latest models of telephone handsets and showed him one which is going to be retailed soon at only £15.

This will be used to attack British Telecom's rental market and people with several extensions stand to make considerable savings after covering the initial costs. The penny suddenly dropped for Prior — he was well and truly in the target group of customers.

He reckoned that with his domestic and farming interests his personal telephone network has grown to no fewer than 20 handsets, all of which he rents from British Telecom at a total cost of about £280 a year. For £280 he would be able to buy enough of the new GEC models to do the job and be quits in pocket after less than 15 months.

POLITICS TODAY

Reasons to vote with heart not head

THE ARGUMENTS for tactical voting in the forthcoming British general election are being advanced at two levels. The first, and more sweeping case, is that anything is preferable to the return of Mrs Margaret Thatcher's Conservative Party with an overall majority, and that therefore Labour and Alliance supporters should pool their efforts to defeat Tory candidates. Sometimes that would mean Labour people voting Alliance in order to keep the Tory out, sometimes Alliance supporters would have to vote Labour for the same effect.

The more modest case is that in a constituency where there are two front runners and your own favourite party is almost certain to come third, it might be worth casting your vote for the candidate of your second choice in order to have more influence on the result. I shall discuss the sweeping case first, then say a few words about the modest variant, before concluding that it is in the real interests of all the parties to seek to maximise their percentage share of the vote — though that may not turn out to be how the electorate perceives it.

"Sweeping" is not too strong a word. The case is put forward by Professor Eric Hobsbawm in the May issue of *Marxism Today*, is apparently backed by Mr Frank Field, Labour MP for Stretford and Urmston, and by Mr Stephen Garry, MP for the constituency of the magazine *New Socialist*, which counts as a Labour Party publication.

Professor Hobsbawm, still a member of the Communist Party, writes: "The defeat of the Thatcher Government," he writes, "is the essential task in British politics, and should have absolute priority over any other political goal."

He goes on: "There is, for one, no logical conclusion for those of us who put the defeat of Thatcher first. It is, in every constituency, to vote for the candidate who offers the best chance of beating the Tories."

whether Labour or the Alliance. Hobsbawm has a good record in chronicling the decline of the Labour Party over the years. He now thinks — and he may be right — that "the body of unconditional support on which the party can count today is no larger than it was in 1933, and may be now have crumbled a bit more. We can no longer safely count on more than a quarter of the electorate unless there is a genuine Labour revival."

Notes, however, the extreme nature of his message. What he is saying is that any, but any, combination of forces in the new Parliament would be preferable to Mrs Thatcher being returned again with an outright majority. That would include the possibility of the

longs essentially to the centre-left of British politics. I wonder how far that is true of all of its leaders — Dr David Owen, for example — or all of its voters.

It is a commonplace — Hobsbawm repeats it — that Mrs Thatcher really leads a minority government because it was elected with only around 42 per cent of the vote. Nearly 58 per cent voted anti-Tory. Yet there is another, equally valid way of looking at the same figures. Over 70 per cent of the electorate voted anti-Labour in 1983. It is by no means self-evident that the Alliance would be able to serve under an administration headed by Mr Neil Kinnock, the Labour leader.

Indeed some Alliance supporters would say quite firmly that they are out to displace

quite different. A body called Centre for Electoral Choices, headed by Lord Young of Dartington, who played a large part in writing the Labour Party Manifesto of 1985, is trying to promote more constituency opinion polls this time, but one doubts whether there will be the constant flow of local information that is available at by-elections.

Moreover, it will not always be obvious what the Labour or Alliance voter who wants to keep the Tories out at any cost should do. Take the constituency of Dewsbury in West Yorkshire: the Conservatives won it last time with 38.4 per cent of the vote, Labour polled 35.3 per cent and the SDP 23.3 per cent. Do the Alliance supporters go to Labour or do they hope that the Alliance will be riding so fast that Labour supporters will come to them? There are lots of constituencies like that all over the country. It is very hard to see that any very clear acceptable guidance will be given.

Not least, it is almost inconceivable that the Labour leadership will back the campaign for tactical voting. To do so would be to concede a Labour defeat in advance. Indeed the very existence of the campaign must do Labour harm, for it looks as if that is what some of the party's supporters have already done. So far as I know, there has been no compensation gesture from the Alliance.

So much for the sweeping case for the tactical vote: it looks impracticable and its likely principal effect, if there is any, will be to inflict further damage on the Labour Party.

The modest case, however, is rather more feasible, though it should be said at the start that it is not solely to do with keeping the Tories out. It is about the most use of a single vote.

What you need essentially is a constituency where your preferred party is lagging behind and everybody knows it. Has it not been the case in the Sheffield Hillborough as an illustration. Labour won with

37.2 per cent of the vote last time. The Liberals came second with 34.5 per cent and the Tories third with 28.3 per cent. It would be perfectly understandable for some Tory supporters to switch to the Liberals in the hope of securing an Alliance seat in Sheffield.

This kind of tactical voting has been going on for a long time, perhaps especially in the south. In Richmond and Barnes, for example, the Labour vote last time was down to 7.1 per cent. The Liberals polled 46.4 per cent and the Tories just scraped by with 46.5 per cent. Clearly the Labour vote has been steadily defecting to the Liberals as the best way of defeating the Tory. That is tactical voting as it has been practised for years.

There are, in fact, lots of seats in the south where only a small shift to the Alliance could unseat the Conservative. And that is the biggest fear in Tory Central Office: the Alliance might make gains in the south while Labour keeps its grip in the north. It is the contradiction in Mrs Thatcher's hope of eliminating socialism as the second force in British politics: she wants Labour to hold on, and the Alliance to hold off, a little longer.

My guess is that the Tories can afford to lose quite a few seats to the Alliance and still win a comfortable overall majority. They may even lose

hardly any. The most interesting question about the election, however, is the battle for second place in terms of the percentage share of the vote. It is worth looking at it from the point of view of the parties. The objective of all of them must be to win the largest share of the vote possible. That goes even for the Tories. For if they can raise their vote above 42 per cent — say to above 45 per cent — they will go some way to undermining the charge that they are a minority government. It means that every Tory vote counts, even in constituencies where they are in danger of losing their deposit.

For Labour and the Alliance the point is obvious. They need every vote they can get in order to be equipped for any discussion on further realignment once the election is over. Thus a Labour vote in Richmond and Barnes is not necessarily wasted. It goes towards the national count. If the Labour share of the vote overall falls below that of the Alliance, then its future really will be bleak.

That is why one cannot see any of the party leaders encouraging tactical voting. This time every vote matters wherever it is cast, for if a Tory victory can be more or less taken for granted, the percentage cannot. It remains, of course, delightful to see the Tories do its own thing and ignore party advice.

Lombard Incentives and excesses

By Richard Lambert

LEE IACocca, the resplendent chairman of Chrysler Corporation, had a good year in 1986: his total rewards from the company came to a little over \$20m. This year looks promising, too, with another big jump of highly profitable stock options coming through. Steven Ross is another US company chief with rosy prospects. He has just signed a ten-year contract with his company, Warner Communications, on a reasonably conservative view should be worth more than \$140m over the next ten years.

The question is whether this simply amounts to just rewards for high endeavour. Setting a fair value on a successful chief executive is an impossible exercise. But the Warner contract — 52 years of dense, packed legalese — looks a good example of how not to go about the job.

Entrepreneurs who build up a business from scratch take huge personal risks and occasionally — as in the case of Bill Gates, the 31-year old founder of Microsoft whose stock is now worth the better part of \$1bn, is a good example. The same can reasonably apply to people who successfully pull back major corporations from the edge of the grave. When Chrysler was all but dead, Iacocca at one stage worked for a year for the payment of one dollar. Most of his huge rewards last year came from options which were granted at a time when Chrysler shares were worth a fraction of their present price, and when the company's future was still highly uncertain.

Warner is in an altogether different position. Ross is its architect and its inspiration, and has successfully turned the company round after enormous losses in computer games. Now it is on a firm basis, and the risks involved in his job are negligible.

Another shortcoming is that the compensation package is not built around incentives for performance. At one highly improbable extreme, admittedly, the contract states that the chief executive can be sacked if he is convicted of a felony which is not subject to appeal. But otherwise, the main emphasis is not on performance, but rather on indemnities to pay for the next 10 years.

Should that be necessary? There has often been speculation that Iacocca might find different jobs, ranging all the way up to the White House. But he is America's best known businessman: Ross is another story.

The much criticised share option scheme announced earlier this year by the Burton Group in the UK is linked to a set of highly ambitious performance targets both for the company and the individual managers who stand to benefit from the scheme. In the case of Warner, Ross will learn a comfortable living even if the company's stocks and earnings remain flat over the next 10 years. And if the shares are swept ahead in the general rush of a bull market, he would start to make some really serious money.

Another requirement of a chief executive's compensation package is that it should be set and approved by independent directors, and have the full support of the board. The Warner agreement was approved by a vote of nine to six at what, according to *Fortune* magazine, was a heated board meeting. The opposition came from directors nominated by an outside shareholder, who might have had other axes to grind and Ross had rightly disqualify himself from voting. All the same, it was not the ideal way to approve what could be the most lucrative contract for any chief executive in the UK.

Compensation packages also ought to be able to pass what might be described as the straight face test. Can you imagine a forum in which you could safely declare that a 59 year old man running a business of no great national importance was worth a 10-year contract with annual payments which would be in excess of those received by the entire US senate?

If big rewards are to be justified by success, then anything less than success needs to be subject to big penalties. On the fact of things, Iacocca passes this elementary test of capitalism, and Ross does not. It will be interesting to see how shareholders react at Warner's annual meeting next month.

Malcolm Rutherford discusses the inscrutable art of tactical voting

Under Unionists having a say in the shaping of a government.

It overlooks the strong possibility that Labour, Alliance, or even the Tories might not wish to unite and that the Alliance itself might be divided. It seems to me like a recipe for parliamentary anarchy.

The only good thing I can think of to say about it is that it is an attempt to bounce the leadership of the Labour Party and the Alliance into a recognition that either or both there will have to be a further process of political realignment. If there is to be a credible opposition to the Tories.

There are some other practical flaws in the argument. While the RT, Hobsbawm's thesis is based largely on the assumption that the Alliance be-

Labour as the alternative party of government, not to shore it up. The long-term interests of the Alliance lie in Labour's continuing decline.

There are also practical difficulties in the constituencies. Tactical voting in by-elections is one thing. The media are ubiquitous, there are frequent opinion polls and it is possible to trace the vote moving.

Besides, there are so few by-elections nowadays that they are no longer an accurate guide to voting intentions at a general election. Almost the only constituency they have shown to trace the vote moving.

In a general election, it is

Letters to the Editor

The 1980s: neither wild nor sleepy

From Mr M. Newin.

Sir, — Michael Prouse's article, When disbelief can no longer be suspended (April 15), concluded with the question of whether the current world economic situation "is more reminiscent of the wild 1920s or the sleepy, secure 1950s". The answer, surely, is neither. The current world economic situation is more reminiscent of the 1930s. In terms of the 50-year Kondratieff cycle, the 1980s is a period of recovery following the severe recession of 1979-82, just as the 1930s was a period of recovery after the Great Depression of 1929-32. There is very little evidence of the speculative excesses feared by Mr Prouse.

While the FT all-time index of the UK stockmarket may be close to an all-time high in nominal terms, it has still not regained the heights it achieved in real, inflation-adjusted terms during the late 1960s. Nor are price-earnings multiples spectacularly high in historic terms.

Let us hope that international debate will begin to focus on the realities of the current exchange rate situation and the weakness of the Western economies, before further forced devaluations lead us all into recessions.

Rosalind Altmann, Executive Director, International Investment Group, Chase Manhattan Bank, Coleman Street, E.C.2.

Quality of local council services

From Councillor Peter Prince.

Sir, Your leading article "Local finance in a mess" (April 15) neglects the most important issue of all, and that is the basic approach taken by any administration. Where those in power take a sensible, prudent financial policy, it is quite possible to improve services, yet keep rates low. Between 1982 and 1986 the Conservative led council in Hammer-smith and Fulham improved services very significantly, for example, a 40 per cent increase in satisfactory housing, and yet reduced rates, by cutting out waste and inefficiency, and this in an inner-city borough. How? By maximising Government financial support so that at the end we were actually spending more in real terms (not my prejudiced assessment, but in Steve Bundred's report issued from Labour Party headquarters in March 1986).

Now we have a council who

have openly proclaimed: "We are concerned with the national interests of the ratepayer" and subsequently the architect of their borrowing plans wrote: "Building up debts for future years and not something we should worry about. It is something we should carefully plan the more Labour authorities that have built up future years debts and are faced with a cash crisis in 1989-90, the better if that means local authorities being forced to take on the Government."

The fundamental change which has taken place is that there are now a whole series of councillors who are determined to destroy the current system. For banks to lend money to such authorities is reckless and irresponsible, and they have only themselves to blame if they find themselves in the after 1990 cannot repay the debts without so inspiring services that they cause unacceptable damage to the people in their boroughs. In such circumstances those councillors will undoubtedly take a lesson from Basil.

Peter Prince, Local Director of Hammer-smith and Fulham, Town Hall, King St, W.6.

Power to the board watchdogs

From Mr D. G. Pearce.

Sir, — Pro Ned are to be congratulated for producing a Code of Conduct for non-executive directors. Particularly they have highlighted the contribution they can make to a board beside being a watchdog for the shareholders.

However, their Code would have been strengthened further had Pro Ned accepted the fact that company law needs to be changed to strengthen the power of the non-executive director.

At the moment a non-executive director is on the board at the invitation of the chairman. His only sanction against the chairman or the board is to resign. Failing changes in the law, it would have been easy to stipulate that the shareholders should be empowered to elect or remove a non-executive director. Quite clearly a greater contribution could be made to the economy of the country if non-executive directors were appointed to smaller companies with a turnover of £1m or, with 50-plus employees.

Derek Pearce, Chairman, Outside Directors Limited, Beopham, Norfolk.

Would you ask an upholsterer to make you a suit?

Of course you wouldn't — so why go to anyone other than TCB for a property loan.

We are specialists in property funding, lending any amount from £25,000 to £10 million.

For anything from house building to industrial development, from office refurbishment to the purchase of investment property. In fact we're prepared to consider a loan for any viable commercial purpose.

And we're organised to payout fast. In fact, in most cases we can give an indication over the phone as to

whether we can lend the money and the rate of interest we'd charge (rates you'd certainly find competitive).

Once a loan application has been accepted our own in-house solicitors will be able to speed up the legal process.

For further information ring John Edwards at our head office, on 0273-29711 or Michael Moss at our London office on 01-638 2855. (or if you prefer simply write to either at the addresses below).

So if you're in a hurry, contact them now.

TCB Ltd, Century House, Dyke Road, Brighton BN1 3FX.
TCB Ltd, St Alphege House, Fore Street, London EC2P 2HL.

Chrysler moves into Lamborghini's driving seat

BY ALAN FRIEDMAN IN MILAN

CHRYSLER, the US car group which for the past year has displayed a growing interest in buying into Italian sports car makers, yesterday agreed to acquire 100 per cent of Lamborghini, the legendary Bologna-based producer of luxury cars. Although the company was only founded in 1963 by Mr Ferruccio Lamborghini, it has distinguished itself as one of the motoring world's most famed manufacturers of high performance vehicles.

The purchase price was not disclosed, but Chrysler is understood to be paying the Mirman family of Geneva between \$20m and \$25m for Lamborghini, which last year produced only 300 cars.

Chrysler's acquisition of Lam-

orghini, which broke even in 1986 on sales of 1,284 (\$21.5m), follows its earlier decision to buy into Maserati. Chrysler has a 15.6 per cent stake in Maserati, with an option to increase this to 48 per cent.

Mr Gerald Greenwald, Chrysler chairman spoke yesterday of the "advanced electronics knowledge and North American marketing expertise" which the US group would offer Lamborghini. He said there would also be an exchange of car components between the two companies.

Maserati is building a luxury car model for Chrysler to sell in North America. Lamborghini originally approached Chrysler with the same idea in November 1985, a spokes-

man said yesterday. "Instead of just the model or a minority stake they said they wanted to buy all of Lamborghini," recalled an Italian executive.

With Chrysler owning part of Maserati and all of Lamborghini, Italy's famed luxury car makers have lost their financial independence. Ferrari is controlled by Fiat, which last year succeeded in taking control of the loss-making Alfa Romeo.

However, while Italian sports car makers may no longer be independently owned, they obviously have a certain cachet in the US market.

The Cadillac division of General Motors, for example, will later this

year launch an Italian-made high performance car, the Allante, which is being partly built by Pininfarina, the Turin-based designer. The Allante bodies will be shipped by Boeing 747 jet from Turin (three flights a week, 60 cars a flight) to Detroit, where engines will be installed at a Cadillac plant.

Lamborghini, meanwhile, says it will increase its output to 450 cars this year, and is predicting it will again return a break-even result on total 1987 sales of \$145m. Some 25 per cent of Lamborghini sales come from the US market, and the company said yesterday that, with its new owner, it hoped to increase this proportion substantially. The company employs 300 people.

The plan this year is to produce 230 Countach models. This is the 12-cylinder, 455-horsepower V12 Lamborghini which the company claims is the "fastest car in the world," at least among those available away from a race track. The Countach, which can speed at 265 kilometres (165 miles) an hour, sells in the US for a mere \$127,000.

A cheaper Lamborghini two-seater is the Jalpa, 70 of which are to be built this year. The eight-cylinder Jalpa sells for \$70,000. The company also plans to build 180 four-wheel-drive LM-002 models this year. This car can attain the speed of 220 kilometres an hour "on asphalt or sand" according to Lamborghini.

Wong Sulong in Kuala Lumpur reports on the challenge to Mahathir's leadership

Testing time for Malay premier

DR MAHATHIR MOHAMAD, Malaysia's blunt Prime Minister, faces his most serious political challenge when the ruling United Malays National Organisation (UMNO), holds its triennial elections today.

The 61-year-old doctor of medicine from Kedah state is seeking re-election as party president, and is being challenged by Tengku Razaleigh Hamzah, 50, his Trade and Industry Minister, a proud and charismatic prince from Kelantan state.

UMNO has ruled Malaysia since independence 30 years ago in coalition with satellite parties representing non-Malays. Thus not only the leadership of the party, but also that of the country is at stake.

A few months ago, Dr Mahathir was in an almost unassailable position. He had led UMNO to a stunning victory in last August's general elections. But now he is on the defensive.

Dr Mahathir Mohamad

fundamental policies. Tengku Razaleigh and Datuk Musa complain of the Prime Minister's authoritarian style of leadership, corruption in high places and the Government's mismanagement of the economy.

They say a change of leadership is needed to restore local and foreign confidence, crucial for an economic recovery. They argue that Dr Mahathir's "Look East" policy of favouring Japan has alienated Malaysia's traditional friends, and his heavy industrialisation programme has been a colossal mistake.

Two of the Prime Minister's closest advisers - Mr Daim Zaiduddin, the Finance Minister, and Mr Anwar Ibrahim, the young, fast-rising Education Minister - have been singled out for criticism. Mr Daim's business deals have been the source of much controversy. Particularly sensitive was his acquisition of a controlling stake in United Malaysian Banking Corporation, which he subsequently sold to Pemas, a

government agency, reportedly at a huge profit.

Tengku Razaleigh and Datuk Musa are also concerned at the way Islamic fundamentalists have spread their tentacles in various spheres of Malaysian society. However, it is difficult to articulate this concern to a Malay audience.

Dr Mahathir has countered with a blistering attack on his opponents, branding them as impatient, power-hungry politicians.

"Their supporters say I am like the former Philippine President Marcos and that I am the world's richest prime minister. But how many people have I shot? Where am I hiding all this so-called wealth?" he asks with sarcasm.

"When I took over as Prime Minister six years ago, there were several hundred detainees under the Internal Security Act. Now, there are only a few hard-core communists in the detention camps," he says.

He argues the Malaysian recession is because of depressed commodity prices: "something that is beyond our control."

A total of 1,507 delegates will decide the outcome of the UMNO polls and the battle lines are set across the party.

There is no place for fence-sitters, as shown in the case of Datuk Abdullah Ahmad, an ambitious member of Parliament. He launched his campaign in Singapore on Malaysia's Independence Day last August, championing Malay dominance.

He had hoped both sides would support his bid for a vice-presidential post, but when nominations closed last Saturday, he had to be content to vie for one of the 22 Supreme Council seats.

The UMNO poll represents a watershed. "UMNO will never be the same again. The winner now takes all," says a party veteran. There is little doubt that whoever wins, there will be a shake-up in the party, the Government, the corporate sector and the local press.

The non-Malays, particularly the Chinese, who still wield great influence in the economy, are viewing the coming battle with a great deal of nervousness. UMNO has been the dominant party in Malaysia for so long that instability within UMNO will usher in a period of instability in the country.

The Chinese fear they would end up the losers. They reckon that whoever emerges as the victor in the UMNO polls will win by a narrow margin. He will need to consolidate his position, and may have to offer concessions to the Malays at the expense of other races.

Japan in Third World aid offer

By Shiroh Fueno in Washington

MR SHIROH FUENO, the special envoy sent to Washington by Mr Yasuhiro Nakasone, the Japanese Prime Minister, ahead of Mr Nakasone's official visit next week, has told the Reagan administration that Japan is prepared to pump \$500m over three years into heavily indebted developing countries.

US Administration officials confirmed yesterday that during his two days of talks in Washington Mr Abe had raised the possibility of "some form of new recycling scheme" aimed at using Japan's enormous currency earnings in the Third World.

The officials said the idea floated by Mr Abe was that the \$500m would be spread over three years and that it might be handled by the Japanese equivalent of the US Export-Import Bank (Exim Bank).

But the officials added: "We have not seen the details yet and the details are very important. ... It sounds encouraging - they are thinking in large terms about recycling."

Mr Abe's visit was designed in part to ease friction between the two countries which erupted following Washington's imposition at the end of last month of retaliatory duties on \$500m of Japanese imports. The duties were a response to the alleged failure of Japan to end the dumping of semiconductors in the US and other countries.

Mr Abe's disclosure of the proposal to use some of Japan's huge foreign currency earnings to help Third World debtors seems timed to improve the atmosphere for Mr Nakasone's visit.

It coincides with a widespread perception that US Treasury Secretary James Baker's "plan" for tackling Third World debt is in trouble. Washington is also acutely conscious of the fact that the prospects for an improvement in the \$170bn US trade deficit would be brighter if Latin American debtors in particular could increase their imports from the US.

For two years the US has been pressing Japan to stimulate its economy in order to help sustain world economic growth, improve access to its markets and take greater responsibility for the overall performance of the world economy.

Mr Nakasone is expected to outline the latest Japanese response to these continuing pressures. He will do so against the background of mounting frustration on Capitol Hill at the perceived failure of his country to respond satisfactorily to US demands.

Mr Jim Wright, the Democratic Speaker of the House of Representatives, has said that the House will not change its plans to debate new trade legislation which would increase pressure on Japan.

Reagan Administration officials confirmed that Mr Abe had outlined the key elements of the Japanese response, which Mr Nakasone will formally present.

Tokyo report urges cut in trade surplus

BY CARLA RAPOPORT IN TOKYO

A HIGH LEVEL advisory group to Mr Yasuhiro Nakasone, the Japanese Prime Minister, yesterday urged the Japanese Government to take immediate steps to expand domestic demand and reduce the country's huge trade surplus.

The report, prepared by a special committee on economic restructuring chaired by Mr Haruo Maekawa, former governor of the Bank of Japan, said Japan's trade surplus "cannot be allowed to continue. ... Japan must take the initiative in rolling back protectionism and defending the free trade system" by rectifying its trade imbalances.

The 25-page report, however, failed to set a specific target on how much or by when Japan's trade imbalance should be reduced. Its list of specific recommendations, none the less, is expected to become the blueprint for Japanese economic and fiscal policy over the next five years.

The report comes eight months after the release of the Maekawa Report, which set the general policy toward economic restructuring through the reduction of exports and stimulation of domestic demand.

Japan's 1987-88 budget was approved by Parliament last night after a last-minute compromise which included the Government's withdrawal of its controversial sales tax proposal. Page 4

Yesterday's release was timed to precede Mr Nakasone's trip to Washington next week, when he will explain the specific recommendations for change to President Ronald Reagan.

Among the recommendations listed for immediate action are further deregulation of the distribution and financial sectors, "extraordinary and urgent" fiscal measures to cope with the current economic slowdown in Japan, reform of the country's land tax policies, increased imports of manufactured goods, improved productivity in the agricultural sector and shortened working hours for Japanese government and private sector employees.

Despite the more specific nature of the proposals, however, Mr Maekawa said their effects might not be fully felt for as many as five or more years.

Japanese telecom merger may be off

BY IAN RODGER IN TOKYO AND DAVID THOMAS IN LONDON

A NEW twist has been added to the row over Japan's plans to open its international telecommunications traffic to competition, with two important developments being given radically different interpretations by opposing factions.

It emerged yesterday that the proposed merger of the two consortia competing for a licence to operate Japan's second international telecommunications service is likely to be called off.

This merger proposal prompted an angry reaction from both the US and British Governments, but received the support of Japan's Ministry of Posts and Telecommunications. A get-together would have limited the stakes in the venture of foreign companies, including Cable and Wireless, the UK telecommunications group.

Mr Nobuo Ito, president of the all-Japanese consortium in the consortium, International Telecom Japan (ITJ), said the prospects of the merger occurring were now bleak.

He said that his consortium would apply for a licence of its own if a planned meeting with the other consortium, International Digital Communications, which is backed

by Cable and Wireless, did not result in any progress.

Separately, it became clear yesterday that KDD, Japan's existing monopoly provider of international telecommunications, is joining American Telephone and Telegraph (AT&T) of the US in launching a feasibility study for a new trans-Pacific fibre optic cable.

Until recently, official opinion in Japan was that there was not enough demand for a new cable. This argument was used against the proposal by the Cable and Wireless consortium which is planning a new cable to cater for the expected increase in traffic.

However, Mr Shunjiro Kariwa, Japan's telecommunications minister, recently indicated that he was no longer against a new cable.

In Japan, these two developments were being seen as further attempts to torpedo the Cable and Wireless consortium's proposal. It was felt that the proposed KDD-AT&T cable would make any other cable plan redundant and that ITJ would be given the second international telecommunications operator licence.

business is successfully used for damages either by the Argyl Group, whose counter-bid for Distillers was frustrated by Guinness, or by Distillers shareholders.

Although Argyl's chances of success are not regarded as very high, it is thought that Distillers' shareholders may successfully claim they were wrongfully induced to accept Guinness shares during the bid on the basis of a share price which had been artificially inflated. In that case, Guinness could be liable for up to £400m in damages.

Guinness said yesterday merely that it would "vigorously" defend any action and was not making provisions because of "opinions" received from leading counsel and the company's professional advisers.

The financial results of the company for the 15 months to December 31 were in line with market expectations. Pre-tax profits for the period (excluding the £125m write-off) were £355m. This includes the profits from Distillers since the date of its acquisition last April.

The original Guinness businesses, stripping out the contributions from Distillers and from Arthur Bell, the spirits company acquired in August 1985, showed an increase in pre-tax profits from £85m in the 12 months to September 1985 to £171m in the 12 months to December 1986.

Earnings per share rose from 25.3p in the year to September 1985 to 28.6p in the 12 months to December 1986.

THE LEX COLUMN

The drinks are on the house

In purely nominal terms, the Guinness share price of 331p is very much where it was when the inspectors arrived to investigate the company last December. By writing down £125m to experience below the line, Guinness's new management is now doing its best to persuade the market that the only thing to have been truly lost is time. Never mind the scandal, say the provisions, look at the potential earnings: the extraordinary items are meant to free an investment in Guinness from the taint of its shady recent past.

But whatever good news Guinness is able to relate about spirits, liquor, it is a message that the market is still not yet ready to buy. For while Guinness has indeed reported encouraging progress in its business - consumers on the way to justifying the original grandiose scheme - there are several reasons why its rehabilitation remains incomplete.

Although the £125m provides for getting nothing back from the Bocky investment, possibly a conservative assumption, and includes £17m of dubious payments which may yet be recovered, there is still £40m of "other" items of which no real election has yet been given. That £40m is in itself immaterial to a group the size of Guinness, but it represents a continuing area of doubt. And however tenuous Argyl's prospects in the courts, the market takes a little more seriously the possibility that ex-shareholders in Distillers might seek to recover the difference between what they got from Guinness and the sponsored price paid by the Guinness supporters club. Remember the overhang of shares bought to support the Guinness price, and it seems reasonable to let the brew settle a while before swallowing the shares once more.

Guinness Share Price relative to FT-A All-Share Index

There is even a 7 per cent discount - whatever next - an unwelcome reminder. Not that Hilldown shareholders should complain: Mr Thompson is paying the entire cost of the transaction, even although the company is the beneficiary of the wider distribution than would be available via a cut-price bought deal.

Yesterday's £24p fall to 265p in the Hilldown shares reflects the increase in the amount of stock now available to the market. Yet the remaining chairman clearly thinks the shares a bargain: he is buying over £2m worth.

Millards' desire to remain independent is fervent enough to generate a forecast of a 45 per cent profits increase for a year which has yet to begin. Not bad for a participant in such a competitive industry. Yet this is not the sort of strategic argument which will induce undecided shareholders to remain faithful long-term. It may however be a good way of making Tesco pay more, which is not the apparent objective of the Hillards management. Whatever its merits, the forecast was enough to send the Hillards shares up 10p to 335p, more comfortably clear of Tesco's sighting shot.

Millards' desire to remain independent is fervent enough to generate a forecast of a 45 per cent profits increase for a year which has yet to begin. Not bad for a participant in such a competitive industry. Yet this is not the sort of strategic argument which will induce undecided shareholders to remain faithful long-term. It may however be a good way of making Tesco pay more, which is not the apparent objective of the Hillards management. Whatever its merits, the forecast was enough to send the Hillards shares up 10p to 335p, more comfortably clear of Tesco's sighting shot.

Five years ago Littlewoods would not have been able to go public; now it has no need to. With profits for 1986 up 16 per cent to £76.1m, its revitalisation is barely half complete. Yet the sales growth from its chain

stores in 1986, at 11 per cent, may prove near to or even better than its closest rivals.

Refurbishments and new stores - all internally financed - are beginning to do the trick, although Littlewoods may still be lagging the majority of the high street in design and marketing. The switch from the dowdy blue fascias to brash orange is already being superseded by pastel peach and grey.

While the chain store margins are still only 3.7 per cent pre-interest, a more normal return should be achieved in the next couple of years, demonstrating Littlewoods' reappearance as a major retailing force. That is being shown too in mail order and in the new ventures, catalogue and home accessory shops. If Littlewoods is to expand its market share, others may feel the pinch even if retail sales are booming. And with so much of the industry now in the hands of the quoted store groups, there must eventually be a sorting out of the ratings of sheep and goats in the sector.

Micro Focus

Motivating the workers through a share option scheme is just the sort of thing progressive companies are supposed to do. No one expects the scheme to be more than a minor drain on the company. But Micro Focus's scheme has forced it to make a £350,000 write-off on top of a post-tax loss of £265,000 in the year to January.

It was a rather curious scheme in the first place, using a nominee company to mop up existing shares sold by departing staff at market prices, which seem to have averaged around 700p intending to sell them on or grant options against them. In fact options at a price of 240p were to be satisfied by the nominee company buying yet further shares from directors at this option price.

The nominee largely financed its purchases through a loan from Micro Focus. All would have been dandy had the shares not plunged from the peak of near £10, including the famous halving in one day in 1985, to 134p, down 9p yesterday. With the security for the loan eroded, the write off was inevitable and should have been foreseeable.

ANATOMY OF A STAR

Our star comprises four arrowheads, each of which contains, in Arabic calligraphy, two words: Commercial Bank.

This is the corporate symbol of the Commercial Bank of Kuwait, famous for its pioneering approach to Middle East banking.

We were the first Kuwaiti bank to establish a foreign exchange dealing room; first to introduce automated letters of credit; and first to link all branches on-line to a central computer.

Now we're leading the way with forward rate agreements, interest rate swaps, currency options and interest rate options.

With strong contacts in 89 countries many major companies are already enjoying the benefits of our services. So could you. And at very competitive prices, too.

Bear in mind next time you have a special need. Commercial Bank of Kuwait promises you an open mind and some very imaginative thinking.

Guinness writes off £125m in bid costs

Continued from Page 1

partnership managed by Mr Ivan Boesky, the disgraced New York bid arranger, in what is thought to have been an element in a payoff for his assistance in the takeover battle.

Some of the investment may well be recovered, possibly through litigation, but provisions have been made for the entire sum as a matter of prudence.

The £125m provision, which is being treated as an extraordinary item, is less than many City of London analysts and investors feared. The Guinness share price rose yesterday from 320 1/2p to 331p.

Stockbroking analysts were however worried by the company's failure to provide for the contingent liabilities that will crystallise if Guinness

is successfully sued for damages either by the Argyl Group, whose counter-bid for Distillers was frustrated by Guinness, or by Distillers shareholders.

Although Argyl's chances of success are not regarded as very high, it is thought that Distillers' shareholders may successfully claim they were wrongfully induced to accept Guinness shares during the bid on the basis of a share price which had been artificially inflated. In that case, Guinness could be liable for up to £400m in damages.

BankAmerica profits rise despite Latin debt

BY ANATOLE KALETSKY IN NEW YORK

BANKAMERICA Corporation, the troubled holding company for Bank of America, the second largest US banking group, has managed to stay in the black despite the cost of placing \$2.1bn of loans to Latin American on a non-accrual basis.

In the first quarter the company had net earnings of \$97m, or 34 cents a share, compared with \$83m or 31 cents the year before. Total assets fell from \$117.7bn a year ago to \$99bn.

The latest profits remain meagre in relation to BankAmerica's total assets and are somewhat down, after allowing for unusual items, on the results reported last year but they have not dispelled hopes that the San Francisco banking giant

may finally be past the nadir of its misfortunes.

BankAmerica shares rose 3/4 to \$11 1/4 by lunchtime yesterday, shortly after the results announcement.

Mr A.W. Clausen, BankAmerica's chairman, welcomed the latest results as evidence of "continued success with our restructuring efforts."

He pointed, in particular, to cuts in the bank's operating expenses, a 15 per cent reduction in net credit losses and an improvement in the bank's primary capital ratio to 7.38 per cent from 6.92 per cent in the fourth quarter of last year.

However, the detailed results show that the bank is still far from being in robust condition. The net income of \$97m includes \$127m in

after-tax gains from asset sales, including the \$112m profit from discount brokerage operation.

In addition, there is a \$31m benefit from a change in accounting for revolving credit facilities. These factors are partly offset by the \$54m after-tax cost of putting loans to Brazil and Ecuador on non-accrual status.

Although net credit losses, at \$315m, are 15 per cent down on the fourth quarter of 1986, they are 23 per cent higher than in last year's first quarter.

Meanwhile, non-interest expenses have been reduced only by 2 per cent from \$1.04bn in the first quarter of 1986 to \$1.03bn.

Fiat unit to receive Fl 650m injection

By Kenneth Gooding, Motor Industry Correspondent, in Turin

FIAT, Italy's leading automotive group, is to inject Fl 650m (\$325m) of new capital into Iveco, its Amsterdam-registered heavy commercial vehicle subsidiary.

Mr Giorgio Garruzzo, Iveco's managing director, said yesterday the new money indicated the importance Fiat attributed to the commercial vehicle sector in its strategic plans for balanced growth. Iveco intends to use the funds to maintain the current high level of investment in new products and production facilities.

He also reported during the run-up to the Turin truck show that preliminary results indicate Iveco, the second largest of Europe's heavy trucks producers, more than doubled its net profit after tax last year from Fl 120m in 1985 to Fl 264m on turnover unchanged at Fl 9m. All the major operating subsidiaries - in Italy, France (Uale) and West Germany (Magirus) - were profitable last year.

Mr Garruzzo predicted profit growth would continue in 1987 but not at such a fast rate.

The company is to pay a dividend of Fl 80m - its first payment since 1979 - next month if the board approves.

More International company news, Page 47

Capital investment last year increased by 34 per cent to Fl 261m while research and development investment - written off against annual profits - rose from Fl 278m to Fl 331m. Mr Garruzzo said investment spending would continue to grow this year because it had not yet reached its peak.

Iveco's cash flow was positive last year and would continue to be. The company's debt was reduced by 8 per cent to about Fl 1.38bn at the end of 1986. The reduction was 12 per cent before the consolidation on December 31 of the new Astra specialist vehicle subsidiary in Italy and Iveco's 48 per cent share in Iveco Ford Truck in the UK.

Mr Garruzzo said the progress of Iveco Ford, formed in July last year, was on schedule. Accounts are being drawn up to cover the company's first six months and will include all start-up costs. The partners would be agreed, yet in new money necessary to restore Iveco Ford's capital to \$40m.

Iveco's production of vehicles of 3.5 tonnes gross weight and above last year fell by 3.5 per cent to 94,200 because an improvement in European demand was not enough to offset the sharp downturn in markets outside Europe.

Iveco is one of the world's leading producers of diesel engines. Last year production increased by 3.9 per cent to 286,000. Output of forklift trucks rose 9 per cent to 5,531.

Mr Garruzzo said production of vehicles, diesel engines and lift trucks this year, was not expected to alter significantly from the 1986 level.

Schering to keep dividend unchanged

By Leslie Collett in Berlin

SCHERING, the West German pharmaceuticals and chemicals company, said it would recommend payment of an unchanged 24 per cent dividend at the shareholders' meeting in June.

The West Berlin company said group earnings last year were DM 141m (\$78.3m) (DM 173m in 1985) while the parent company had net income of DM 106m (DM 112m in 1985). Of this, DM 40m is to be set aside as retained income.

The drop in group earnings was mainly the result of a decline in profitability of Schering's US subsidiaries. In addition, the company had non-recurring expenses in reorganising its UK subsidiaries.

In the first quarter of this year, group turnover fell 1.7 per cent to DM 1.2bn, reflecting a 60 per cent share of sales outside West Germany. After adjustment for exchange rate fluctuations, however, there was a slight increase in sales of 0.1 per cent.

Pharmaceutical sales rose worldwide while agro-chemicals and electroluting fell behind last year's turnover. Sales of industrial chemicals were equal to the 1985 level.

The strong D-Mark was the main cause in the fall in turnover. Schering said this would also influence this year's earnings. It said it was still "confident" that an overall increase in sales would again result this year in "satisfactory" earnings.

After a long period of continuous growth, turnover dropped last year by 9 per cent to DM 4.7bn.

Canada set to back Amoco bid for Dome

BY BERNARD SIMON IN TORONTO

THE CANADIAN Government was poised yesterday to throw its support behind the controversial bid by Amoco, the US oil group, for Dome Petroleum, the hard-pressed Calgary oil and gas producer.

Struggling off critics who object to a US company acquiring control of a symbol of Canadian energy, cabinet ministers were expected to tell a press conference in Ottawa late yesterday afternoon that the takeover of Dome was a private sector affair.

According to an Energy Department official, a ministerial statement drafted earlier indicated that Ottawa had no objections to the C\$5.1bn (\$3.92bn) agreed bid between Amoco and Dome.

The Government's reaction is a setback to the competing bid for Dome by TransCanada Pipelines (TCPL), the Toronto pipeline operator. TCPL had hoped to capitalise

on its position as a Canadian company to persuade the authorities to provide tax concessions worth several hundred million dollars for an improved offer.

Mr Neil Nichols, TCPL's chief financial officer, said yesterday that the company expected a ruling on its tax requests by the time parliament convened next Monday. He said TCPL was "encouraged" by talks with government officials earlier this week.

In an apparent bid to cool political opposition to the deal, Amoco has agreed to reinvest in Canada the combined cash flow of Dome and its existing wholly-owned Canadian subsidiary. The Chicago company has also promised not to remit dividends from its Canadian operations for the next five years.

Mr Howard Macdonald, Dome's chairman, said that secured creditors, who account for 70 per cent of

the company's C\$8.4bn debt, will face "minimal write-offs" under the Amoco bid. Unsecured creditors, however, will receive 34 or 35 cents to the dollar, Mr Macdonald said.

Dome expects to present detailed proposals to its 56 international creditors within the next two weeks. The company is still working on the details of allocations to different classes of secured creditors. The payments will depend on the type of collateral securing each loan.

Mr Macdonald yesterday welcomed the official attitude to the Amoco deal, saying that "the government line throughout has been to find a commercial solution. We couldn't have asked for better support."

Earlier, Mr Macdonald briefed Mr John Turner, leader of the opposition Liberal Party, on the Amoco bid. Mr Turner softened his criticism of the deal after the meeting.

Credit Lyonnais follows trend with strong gain in earnings

BY DAVID HOUSEGO IN PARIS

CREDIT LYONNAIS, in line with the trend among other big French banks, yesterday announced a strong growth in profits with net consolidated earnings rising by \$2.7 per cent to FFr 1.9bn (\$316m).

But Mr Jean-Marie Leveque, the bank's president, warned against attaching too much significance to the figures because of the current practice of French banks, in agreement with the French Treasury, of making large provisions against sovereign risks in heavily indebted developing countries.

Credit Lyonnais announced that it had paid FFr 6.2bn in provisions last year or 16 per cent more than in 1985. The bank's estimated provisions, on more than 45 heavily indebted developing coun-

tries amount to FFr 11.5bn, equivalent to about 38 per cent of its commitments to this group.

Giving a truer picture, in Mr Leveque's eyes, of Credit Lyonnais' profit earning capacity, gross operating income before provisions rose last year by 20.5 per cent to FFr 9.94bn against a 3.9 per cent decline in 1985. Mr Leveque said operating income would continue to grow this year though not as fast as in 1985.

The boost to operating income last year came from the sharp climb in commissions - reflecting the expansion of the French financial markets - from a strong growth in personal lending and from the bank's low cost resources deriving from unremunerated demand deposits.

Mr Leveque, one of the most outspoken figures in French banking, could not conceal his disappointment that Credit Lyonnais has not yet been given a date for its own privatisation. The bank had been active in advising the government over the privatisation of other groups and he made clear that he believed its competitiveness made it a candidate for early denationalisation. Credit Lyonnais is the second largest and oldest of the French banks.

Group profits were also helped by a clampdown on operating expenses. Personnel costs rose by only 2.5 per cent - or lower than the French inflation rate - because of a 1.4 per cent cut in the bank's workforce in France.

Commodore names new chief

BY LOUISE KENOR IN SAN FRANCISCO

COMMODORE International, the US personal computer manufacturer, has ousted the company's president and chief executive, treasurer, North American general manager and US computer services manager over reported personality differences with Mr Irving Gould, Commodore chairman.

Yesterday, Commodore named Mr Gould as its new chief executive to replace Mr Thomas Rattigan, who filed suit against the company, seeking \$8m in damages and alleging that the company breached his employment contract. In his suit Mr Rattigan said that he was removed from his office by security guards on Monday.

Commodore said that Mr Rattigan's suit was "wholly without merit" and denied breaching his em-

ployment contract. Mr Rattigan joined Commodore from PepsiCo two years ago and was named chief executive last April. He is widely credited with having returned the company to profitability after five quarters of heavy losses during which the company's future became uncertain.

Commodore's stock fell sharply on news of the management

changes yesterday.

Naming new appointments to the posts of US general manager and US general sales manager, Mr Gould yesterday said that these actions "would improve operating efficiency and provide improved momentum for our US business to complement the continued strong performance of our European operations."

At the six months' stage, the company's net loss was \$30.3m (\$1.47 a share) against a loss of just \$600,000, including an extraordinary charge of \$3.5m a year earlier. Revenues totalled \$528.5m, versus \$612.8m in 1986.

Data General's losses mount

BY DAVID OWEN IN NEW YORK

DATA GENERAL, the Massachusetts-based super-mini-computer specialist, reported another poor set of quarterly results yesterday, primarily because of its continued failure to boost overall revenues.

The company has had hard times since 1985, the year it reported its first losses as a public company since it laid off employees company-wide for the first time in its 16-year history.

In its second quarter, the company made a net loss of \$42.0m or \$1.59 a share, including charges totalling \$33m because of early re-

description of debt and the withdrawal of its investment in an unconsolidated affiliate, Maryland-based Dama Telecommunications which it acquired late last year.

The company lost a token \$1.8m (6 cents a share) at the net level in the corresponding year-earlier quarter. Revenues declined to \$315.2m from \$318m in 1986.

Mr Edson de Castro, president, called the lack of growth in overall revenues "disappointing" and attributed it to "the rapid deterioration in sales of our older 16-bit product line."

Acceptance of the company's new MV/15000 and Eclipse MV super-mini-computers "continues to be very positive," Mr de Castro said. It would continue to build up its field sales, system engineering and development organizations to stimulate demand.

At the six months' stage, the company's net loss was \$30.3m (\$1.47 a share) against a loss of just \$600,000, including an extraordinary charge of \$3.5m a year earlier. Revenues totalled \$528.5m, versus \$612.8m in 1986.

Anglo American profits hit

BY JIM JONES IN JOHANNESBURG

NONE OF the mines managed by Anglo American, South Africa's leading mining house, compensated for a declining rand gold price by increasing gold recovery grades during this year's March quarter.

Free State Consolidated Gold Mines (Freegold), the world's largest gold mine, had its underground production affected by industrial disputes and faction fighting among workers and the mill was kept full by processing low-grade surface dump material.

Freegold's mill throughput rose to 5,950 tonnes from the December quarter's 5,780 tonnes and although mining emphasis was switched to higher-grade stopes, the overall recovery grade dropped to 4.34 grams per tonne (g/t) from the previous quarter's 4.47 g/t.

In the Transvaal, Blanders - which has been struggling with ground support problems for several quarters - also showed a drop in mill throughput to 425,000 tonnes from 462,000 tonnes while the gold

recovery grade slipped to 6.25 g/t. It hopes that a new system of support pillars will reduce seismic damage to the workings.

Vaal Reefs increased its throughput to 2.74m tonnes from 2.57m tonnes and this led to a reduction in the unit cost of mining and processing each tonne of ore. The increased processing rate offset the grade decline to 6.70 g/t from 6.76 g/t.

Western Deep levels took the same route but suffered a sharp increase in unit costs, as its increased tonnage was drawn from underground with a reduction in the low-cost tonnage drawn from low-grade surface dumps.

The overall recovery grade rose marginally to 6.52 g/t from 6.50 g/t. Ergo, the residue dump reprocessing operation which can do little about selecting grade, managed a rise in average grade although not enough to offset a lower tonnage processed.

At the six months' stage, the company's net loss was \$30.3m (\$1.47 a share) against a loss of just \$600,000, including an extraordinary charge of \$3.5m a year earlier. Revenues totalled \$528.5m, versus \$612.8m in 1986.

At the six months' stage, the company's net loss was \$30.3m (\$1.47 a share) against a loss of just \$600,000, including an extraordinary charge of \$3.5m a year earlier. Revenues totalled \$528.5m, versus \$612.8m in 1986.

Strong gains at Walt Disney

BY PAUL HANNON IN NEW YORK

WALT DISNEY, the US entertainment and leisure group, surged ahead in the second quarter of its fiscal year as its theme park and film divisions scored large gains in both revenue and profitability.

Net earnings were 76 per cent higher at \$91m, or 68 cents per share, for the three months ended March 31 against \$51.8m or 38 cents for the corresponding period. Revenue for the quarter rose to \$766.2m against \$682.4m, a gain of 28 per cent.

The group's core activities, the theme park and resorts business posted a strong 32 per cent gain in operating profit for the quarter to \$119.8m on revenues which advanced 15 per cent to \$414.8m.

The higher profitability was attributed to increased attendances at both Disneyland and Disney World

and higher per capita guest spending.

The filmed entertainment division scored an even more impressive rise with revenues ahead 88 per cent to \$250.7m and operating income up almost threefold to \$43.7m from \$14.1m in the year ago period.

US syndication of two large packages from the Disney film library, combined with the licensing of feature films for network and cable television, had a major impact on earnings performance. Highly successful cinema releases such as The Color of Money and Outrageous Fortune and the release of Lady and the Tramp also added to the division's strong showing.

A reduction in interest expenses, stemming from lower borrowings and interest rates, helped cut total

corporate outgoings by 21 per cent to \$22.2m from \$28.4m.

For the six month period, net income more than doubled to \$181m from \$86m on revenues of \$1,520m from \$766m. Per share earnings for the first half totalled \$1.32 against 64 cents in early New York trading. Disney shares firmed \$4 to \$53.7.

MCA, the California entertainment and property group, revealed lower profits for the first quarter of \$28.2m or 37 cents per share compared with \$30.9m or 41 cents. Revenue for the quarter improved to \$533.2m from \$513.5m.

The company said the latest figures included a pre-tax adjustment of about \$4m relating to MCA's purchase of a 50 per cent stake in Cinelux Odson in May 1986.

This announcement appears as a matter of record only.

INTERNATIONAL COMPANIES and FINANCE

US retailers seek protection

BY OUR NEW YORK STAFF

MICHIGAN GENERAL and Cook United, two struggling retailers based in different parts of the US, have filed for protection under Chapter 11 of the US bankruptcy code, raising fears that the recent rise in US interest rates is beginning to take its toll on some of the more highly leveraged US corporations.

Michigan General, which has close ties with Mr Marshall Cogan's privately-owned General Felt Industries business empire and operates a chain of lumber and building products stores, has been trying for some time to refinance its high yield "junk bonds" in a bid to cut its heavy financing charges.

The company has been losing

money for some years and last \$34.9m on sales of \$385m in 1986.

Earlier this year it commenced an exchange offer for its \$110m of 10% per cent senior subordinated debentures due 1986 and warned that if this was not successful it might have to file for bankruptcy.

Mr Rocco A. Barbieri, chief executive, and a close associate of Mr Cogan, resigned earlier this year. Michigan General and its Diamond Lumber subsidiary filed for bankruptcy in the Northern District of Texas, Dallas division, on Wednesday.

Cook United, which is headquartered in Cleveland, Ohio, and operates a chain of discount stores,

emerged from the bankruptcy courts only last October.

The company has cut the number of stores it operates in an effort to stem last year's loss of \$16m. It said it had entered into an agreement with Smith Management, a company which specialises in corporate restructurings, to fund a reorganisation plan that Cook intends to file under Chapter 11.

Smith Management will advance Cook \$500,000 initially and in return will receive warrants exercisable for up to 15 per cent of Cook's outstanding shares.

The two bankruptcy filings are likely to refocus attention on some of the more highly leveraged small-

er companies which have been relying on the so-called "junk" bond market for finance.

Many of them have only a small equity base to support a heavy debt load and rising interest rates can jeopardise their survival.

Forbes Magazine reported earlier this year that the privately-owned General Felt Industries had debt of \$1.2bn - some 15 times its equity base.

Daniel Burnham, the New York investment bank which has planned the use of "junk" bonds is reported to have been helping Mr Cogan refinance some of his debts in an effort to ease his cash flow problems.

Fairchild to sell plants in Japan and West Germany

BY LOUISE KEOH IN SAN FRANCISCO

FAIRCHILD SEMICONDUCTOR, the US chip maker that was forced to give up its plans to merge with Fujitsu of Japan in the face of US Government pressure, says that it must sell brand new production facilities in Japan and West Germany.

The economics say the sales are critical. The company needs the cash and must cut its cost base, Mr Don Brooks, Fairchild president, said.

In Japan, Fairchild is seeking a buyer for its wafer fabrication plant in Nagasaki. The state of the art plant, which recently began pilot production, is worth more than \$100m, Mr Brooks said.

Fairchild wants to sell a facility recently built in Wasserburg, West Germany. The building was to have housed another wafer fabrication plant but

has not been equipped, Fairchild said.

Fairchild said it had not yet received any offers for its plants, but industry analysts say the Japanese plant may prove attractive to US or European semiconductor manufacturers who aim to increase their Japanese sales.

Acquiring a state of the art plant would save a purchaser about two years in getting into production, Mr Brooks said.

Fairchild as a whole is also for sale, following the termination of its merger agreement with Fujitsu. Mr Brooks has proposed a management buyout to Fairchild's parent company Schlumberger, but has yet to receive a definitive response. Separately, Schlumberger is understood to be seeking other bidders.

Allied-Signal slightly ahead after disposals

BY OUR NEW YORK STAFF

ALLIED-SIGNAL, the diversified US industrial conglomerate, showed a slight increase in first quarter net earnings to \$18m or \$1.13 a share against \$18m, or 98 cents in the same quarter in 1986, on sales up at \$2.64bn from \$2.44bn previously.

However, the latest quarter included gains of \$3m from discontinued operations and \$42m from the disposal of various businesses. These included this month's \$470m sale of Ampex, the world's leading professional video tape equipment

manufacturer to Lanesborough, a privately-held investment concern.

A year ago the results included a \$14m gain from discontinued operations.

The company attributed the 11 per cent decline in net income from continuing operations to lower margins, particularly in the aerospace sector, and increased development programme expenses.

The comparative figures are restated to exclude the sales and expenses of discontinued operations.

General Dynamics up

BY OUR NEW YORK STAFF

GENERAL DYNAMICS, the US defence contractor which manufactures F-16 fighter aircraft and Tomahawk cruise and tactical missiles, has turned in a significant increase in first-quarter earnings, due largely to improved performance by its Cessna Aircraft general aviation unit.

A \$2.8m operating profit at Cess-

na, which General Dynamics acquired for \$870m in 1985 before writing down its investment by a hefty \$420m late last year, helped push net earnings in the latest quarter to \$105.4m or \$2.45 a share from \$70.1m (\$1.64 a share) a year ago.

In the 1986 quarter, Cessna contributed a \$28.6m operating loss.

Being Dutch is not enough

NOT IN INTERNATIONAL BANKING

The Dutch have a worldwide reputation. For being good, astute businessmen. We're proud of this. But we also know that it's just not enough. Not in the world of international banking which grows daily more complex and sophisticated.

Today, AMRO has an international banking capability precisely tuned to institutional, commercial and corporate needs. Indeed, we are built around them.

Why not get in touch and test our competitive edge. We've got all of the Dutch business virtues as well.

INTERNATIONAL CAPITAL MARKETS and COMPANIES

US uncertainties deflate dollar Eurobond sector

BY CLARE PEARSON

CONTINUED uncertainty about the dollar and fears that US interest rates might rise deflated the dollar Eurobond market yesterday, even though the US Treasury market initially shrugged off the announcement of a larger-than-expected 4.3 per cent estimate for first quarter US growth in gross national product.

Eurobond prices ended the day about a percentage point lower than they had been, although turnover was thin.

In a subdued day in the new issues market, attention focused on a \$600m deal for Mitsubishi Corporation—the largest trading house—the largest equity warrants bond for a Japanese company yet seen. The deal came in the wake of a flurry of similar issues earlier this week.

Mitsubishi's bond, led by Nomura International, met a firm response. This was despite some reservations in the market about its aggressive coupon. At 14 per cent, this outstripped the previous low set by Sumitomo Realty with a 14 per cent bond on Tuesday.

An additional worry for dealers was the announcement by Moody's Investors Service on Wednesday that it was putting the company's long-term debt rating under review for a possible downgrading, along with those of Sumitomo and Mitsu, because of concerns about the effects on these companies of decreasing earnings from their traditional trading activities. Mitsubishi's senior

debt is rated AA-1. Nevertheless, Mitsubishi's five-year deal traded at around 106½, compared with a par issue price.

Elsewhere, Swiss Bank Corporation International led an \$810m three-year deal for its parent, Swiss Bank Corporation, issued through a Cayman Islands subsidiary. The 14 per

INTERNATIONAL BONDS

cent, priced at 101½, traded comfortably within five.

Swiss Bank Corporation also announced a \$100m convertible bond for Cetus, the California-based biotechnology company. The deal traded above its par issue price. It may have received a boost from a news report on Wednesday that the US National Cancer Institute was urging the Food and Drug Administration to expand the use of Cetus' cancer drug, Interleukin-2.

The 15-year issue, priced at par, carries an indicated 10 to 14 per cent coupon and an indicated 20 to 25 per cent conversion premium.

Citibank Investment Bank led a \$475m five-year 9½ per cent bond for Royal Trustco, priced at 101½ to return initially about 73 basis points over yield on Canadian Government bonds. The deal made slow progress as the Euro-Canadian market traded nervously, in

sympathy with the Eurodollar sector.

PaineWebber International led a \$25m convertible bond for J. B. Hilder and Sons, the Boston-based specialty food and grocery store chain which made an initial public offering in the US last October. The coupon on the 15-year par-priced bond was quoted at between 6 and 6½ per cent, and the conversion premium at between 20 and 25 per cent.

Den Danske Bank announced a Dkr 400m deal for Nordic Investment Bank, which was increased from Dkr 300m following strong demand. The five-year 11 per cent bond was priced at 101½.

Dealers in the D-Mark market started the day in cautious mood as the US Treasury market had closed lower, and marked prices down by about 1 point. During the afternoon prices recovered to end slightly firmer on the day.

Turnover was thin, continuing the trend of recent weeks when uncertainty about the direction of the dollar has set the tone for the market.

In the Swiss franc foreign bond market prices moved about 1 point lower in average volume.

The recent \$Fr 250m 2 per cent equity warrants bond for Meda, the subsidiary of Petrofina, closed at par, down 1 point from its first day's trading on Tuesday. Hoechst's \$Fr 130m 5 per cent bond closed at 106½, 1 point lower than the previous day's close.

Japanese utilities switch to Euro-issues

By Yoko Shibata in Tokyo

Euroyen bonds are fast becoming a major vehicle for Japanese electric utilities to raise cheap funds for equipment investment, with issues from the industry amounting to some ¥210bn (\$1.47bn) in less than three months.

The power industry, by the nature of its business, is heavily skewed, with funds needed for investment far exceeding those for current operations.

Of the nine Kansai Electric Power will lead ¥80bn in Euroyen bonds on April 29 and Hokuriku Electric Power is also planning a \$100bn in May. This follows previous Euroyen issues in March by Tokyo Electric Power and Chugoku Electric Power which raised ¥60bn and ¥15bn respectively.

Then came Kyushu Electric Power with ¥40bn earlier this month and ¥40bn on Wednesday for Chubu Electric Power. The latest issue was led by Union Bank of Switzerland (Securities) and was the first Euroyen mandate granted by any Japanese borrower to a foreign bank.

The shift to the Euroyen bond market comes at the expense of the domestic corporate bond market where the nine companies had been key players, and reflects the relatively low lending costs outside Japan. The Chubu issue, for example, carries a coupon of 4.75 per cent, compared with the 4.9 per cent which prevails in the domestic market.

According to capital spending projections made available last week, the nine utilities plan to lay out a total of ¥1.5tn in capital expenditure this year, which started this month. This represents a dip of 0.8 per cent on the previous 12 months.

Tiffany seeks \$84m or more with offering

By Alexander Nicol

Tiffany and Co., the New York jeweller, is tapping the international equity market for a portion of a public offering of shares with a total value of at least \$84m.

The offering of 4m shares, of which \$60,000 are to be sold in the US, will reduce the holdings of Investors Corp., the Bahrain-based investment bank, and General Electric Credit Corporation. They had participated in a leveraged buyout of the company.

Investors' stake will be cut from 49.2 to 23.2 per cent and GEC's from 25.7 to 15.3 per cent by the sale, which is divided about equally between new shares and those being offered by existing holders.

The indicated price range is \$21 to \$23, with final terms to be set in May. Shearman, Lehman Brothers International is handling the international tranche, and its New York parent the US portion.

Nokia-Mobira buys US paging operator

By Olli Virtanen in Helsinki

NOKIA-MOBIRA, the Finnish mobile telephone manufacturer, has entered the US paging operator market by acquiring Diversicom Inc., the country's biggest company in the field.

The purchase price has not been disclosed. The network, which will be run by Cue Paging, a purpose-established subsidiary, covers more than 60 cities from New York to Los Angeles. Nokia-Mobira expects the network to spread to cover 150-200 cities in the next few years.

The network was sold by American Diversified Capital, to whom Nokia-Mobira delivered paging equipment since 1984. The Finnish company made the purchase decision when the "opportunity came up."

A subsidiary of the Finnish Nokia group, Nokia-Mobira is one of the world's leading manufacturers of mobile telephone equipment with a market share of 16 per cent world-wide, including a joint venture manufacturing plant with Tandy of the US in South Korea. Total sales of Nokia-Mobira amounted to Fm 57m (\$185m) in 1986, of which Fm 187m came from the US.

Francis Ghiles on the difficulties facing a North African borrower

Algerians fail to plead their case

THE DECISION by Sonatrach, Algeria's oil and gas monopoly, to drop a \$75m bankers acceptance facility underlines the difficulties the North African country is meeting in raising the estimated \$4.5bn it needs this year to finance its balance of payments deficit and service foreign debt. The company had asked Lloyd Merchant Bank to arrange the facility two months ago.

The market felt that the initial five-year facility for Sonatrach was misplaced. Conditions included an annual margin to the banks for bills of up to and including six months of 1 per cent and for three to six-month bills of 0.7 per cent. The management fee was 1 per cent and the commitment fee 1 per cent per annum. When Lloyd Bank went back suggesting a one-year renewable facility with an interest rate spread of 1 per cent and a commitment fee of 1 per cent, the Algerians balked.

The simultaneous appearance of another loan, being arranged by Long Term Credit Bank of Japan, did not help though the two facilities were aimed at different segments of the market.

This second facility was split between a seven-year loan for \$75m which carried a margin over Libor of 1 per cent and a 10-year \$120m (\$80m) Japanese yen loan. The firm element was drawn down the day after signing on March 11.

A number of international

bankers, notably US ones, are lowering their ceilings on loans to Algeria as they feel the risk has heightened. More cautious lending policies are necessary, they argue, because the country's foreign income declined from \$13bn to \$8bn between

have been raising these past nine months. Banks also find they have unused lines of credit in abundance as their clients compete for projects which take a long time to be decided. Hence the market "seizes" up further,

second half of last year and are estimated to have reached about \$1bn by last December. Since then, however, a number of companies have been paid.

None of the major Western export credit organisations has refused to guarantee Algerian risk. Indeed SACE of Italy recently provided guarantees for a further \$300m line of credit. France's Coface might follow suit if there is a satisfactory outcome of a meeting between the Algerian Minister of Finance, Mr Abdellaziz Khellaf, and his French counterpart, Mr Edouard Balladur, scheduled for later this month. Algerian trade arrears with French companies amount to \$Fr 1bn and Paris will wish to see that figure trimmed before it comes up with any new package.

But the Algerian authorities would do no harm to their relations with international banks if they were to provide more accurate and timely information on the balance of payments, the foreign debt and oil and gas export income remains exceedingly difficult and provides a fertile breeding ground for rumour.

Not once in recent years have senior members of the Algerian establishment convened a meeting of bankers (or, indeed, international company representatives) to explain the many changes they are introducing or seeking to introduce into the running of the economy. A greater willingness to open their books and plead their case could make raising funds abroad that much smoother.

ALGERIA IN 1987 (US\$bn)		Principal long and medium-term debt repayments	2.4
Exports+2.5	Imports-7.5	Short Term Debt and Trade Arrears	0.5
Trade Balance	+1.0	Foreign Reserves (minus gold)	1.2
Debt Interest Payments	-1.5	Foreign Exchange Requirements	4.2
Services	-0.8		
Balance of Payments	-1.3		
FT Estimates			

1985 and 1986. This has made Algeria's debt service \$3.9bn last year and maybe a little lower this year — much heavier to bear.

Bankers acknowledge that Algeria has balanced its trade by tightening its belt very sharply. Imports have been slashed by about 40 per cent. Subsidies on many basic foodstuffs cut and taxes increased. Last year's austerity continues and there is little sign of any relaxation.

Bankers' reticence over medium-term lending also relates to their preference for supporting clients which are bidding for projects in Algeria or subscribing some of the shorter-term paper (up to 21 years) which Algerians banks

making the task of raising medium-term credits all the more difficult. The shift resistance to requests by banks for higher margins has not, since 1985, made Algerian borrowers more popular, although they have progressively accepted higher margins on loans.

In project finance, Algerian companies have increasingly insisted that the usual 15 per cent downpayment, in cash be rolled into the overall supplier credit. They have also tried to convince some western export credit agencies to guarantee short-term bank credits for the import of spare parts. This is also believed to be earmarked for the payment of trade arrears which built up in the

Merrill applies for banking licence in West Germany

BY STEPHEN FIDLER

MERRILL LYNCH, the US securities house, has applied for a banking licence in West Germany and is to reorganise part of its private client business.

The main initial advantage to Merrill of the licence would be to allow it to lead manage D-Mark bond issues, but Mr Stanislas Yashukovich, London-based chairman of the firm's European and Middle East operations, said a subsequent step might be membership of the Frankfurt Stock Exchange.

The firm also is moving its Swiss capital markets operations, hitherto part of its Merrill Lynch Banque Suisse subsidiary, out of the bank and from Geneva to Zurich.

presence in the country. Its five offices, employing 350 people, include an operation in clients, but are mainly involved in private client business.

The setting up of a banking subsidiary in West Germany of the London-based Merrill Lynch International Bank is an attempt to take advantage of West German capital market reforms and follows decisions by two other US investment houses, Salomon Brothers and Morgan Stanley, to open offices in Frankfurt.

Unlike those two firms, Merrill already has a significant

Lower earnings seen by Dutch bio-tech group

By Our Financial Staff

GIST-BROCADES, the Dutch bio-technology group, said yesterday that 1987 net profits would be slightly below 1986 because of pressure on yeast product prices.

Last month the company reported a 10.9 per cent increase in 1986 net profit to Fl 111.1m (\$54m).

Over-production in the world yeast market reduced earnings of its yeast division in the second half of 1986. Increased productivity this year would not fully compensate for the lower price trend, it said.

The sharp fall in the dollar and other world currencies had also reduced guilder income.

Results dip at Union Bank of Switzerland

UNION BANK of Switzerland, the biggest of the Swiss "Big Five," reports "generally satisfactory business development" for the first quarter. Results, however, did not match the record levels for the corresponding 1986 period but income was higher than that for the third and fourth quarters of last year, John Wicks reports from Zurich.

Compared with the final quarter of 1986, interest income showed a slight increase despite the further contraction of margins due to larger business volumes. Balance-sheet total at December 31 was up only \$Fr 1.2bn at \$Fr 163.3bn.

NOKIA

Highlights of 1986

Nokia is Finland's largest privately-owned industrial enterprise. It has 100 subsidiaries in 29 countries and manufacturing in 20 countries.

Nokia's net sales were 12 billion Finnish marks (FIM).

Employees total 28,500, of which 7,000 outside Finland. Forty per cent of Nokia employees work in electronics.

Nokia Information Systems is one of Scandinavia's leading suppliers of point-of-sale systems and workstation networks.

Nokia-Mobira is one of the world's leading manufacturers of mobile telephones.

Selen-Luxor is the leading colour TV manufacturer in Scandinavia.

Nokia Machinery is the world's leading manufacturer of cable machinery.

Nokia Paper is among the leading European manufacturers of soft tissue paper.

Nokia established a technology education center and launched a post-graduate program to triple the number of Licentiate of Technology.

INTERNATIONAL COMPANIES and FINANCE

South Korea takes control of Pan Ocean

BY MAGGIE FORD IN SEOUL

SOUTH KOREAN finance officials yesterday moved to take control of the management of Pan Ocean Shipping, the country's largest shipping company, amid drama sparked off by the suicide of its chairman last weekend.

The debt-ridden company is to be placed under the control of Korea Exchange Bank, and will effectively be in the charge of the government. The move follows demonstrations by the staff of the company over its future, and accusations against Pan Ocean's late chairman and current president of illegal foreign exchange transactions and tax evasion.

Mr Ken Suk Park, the chairman, threw himself from the 10th floor of the company's headquarters last Sunday. He

was said to have been involved in acrimonious arguments with Mr Sang Yon Hahn, the company's president, over management of the ailing concern, which has debts of more than \$1bn.

Tax officials were reported as saying that Pan Ocean employees had tipped them off about Mr Park's alleged activities. The chairman committed suicide just before he was due to attend an appointment at the Office of National Tax Administration.

The company had been in difficulty for some years due to the world recession in shipping. It had already been involved in one government reorganisation, when it had to absorb five other debt-ridden companies. The company at present has more

than 80 vessels, mostly bulk carriers, and paid-up capital of \$85m won (\$45m).

Foreign banks are believed to have loan exposure of around \$22m to the company. The government has directed an inspection team led by another Korean bank to disburse emergency funds to meet Pan Ocean's bills until the crisis is smoothed over.

The death of Mr Park has shocked the South Korean business community which attended his memorial service in Seoul earlier this week. Mr Park, the brother of Mr Tong Sun Park who was involved in the "Koreagate" rice imports scandal in the US during the 1970s, was a fluent English speaker and was described as "very social" by observers.

Readers of Seoul newspapers have been deluged with stories about the lifestyles, houses, foreign trips and family arrangements of both businessmen over the past week.

An editorial in 'one newspaper' pointed out, however, that the death had left a message that both government and banks should take due responsibility for mismanagement and failure to take effective measures in cases involving insolvent businesses.

The South Korean government has been forced to undertake a number of bail-outs of insolvent companies over the past few years, mostly in the construction and shipping sectors. Usually they have approached the matter under what is known as the 10-10 formula.

A healthy company is directed to take over an ailing concern, along with its debts. A 10-year loan is offered by the government, with a 10-year grace period and a 10 per cent interest rate. The terms offered to Pan Ocean when it took over the five indebted companies in 1983 are believed to have been more onerous, exacerbating the difficult relationship between president Hahn and chairman Park.

While South Koreans are critical of businessmen who accept government handouts and favoured treatment to save badly managed businesses, public opinion seems divided over Mr Park's suicide, especially since investigations into tax evasion are a common phenomenon in the business community.

Hyundai Motor plans diversified expansion

BY NICK GARNETT, RECENTLY IN SEOUL

HYUNDAI MOTOR, South Korea's largest vehicle maker, will raise its car production from 420,000 last year to about 600,000 this year, according to Mr Chung Se Yung, the newly appointed chairman of the Hyundai group.

This is in line with capacity at the company's sole car production site at Ulsan following an expansion of its facilities which came fully on stream this month.

Hyundai, which has as its main models the subcompact Pony and Excel and the mid-sized Stellar, is increasing capacity at Ulsan this year to 750,000 cars.

Mr Chung — who took over the chairmanship of Hyundai in January from his elder brother, Mr Chung Yu Yung — said this expansion phase should be completed by the end of 1987. The company sold 168,300 cars

in the US last year — almost all front-wheel drive Excel. This was well above the company's stated output of 100,000 cars.

Last year Hyundai shipped 11,000 cars to the UK, the company's largest European market, and sold 7,000 of these during the 12-month period. It exported a further 4,000 cars to the rest of Europe, mainly the Netherlands, Belgium and Italy.

Mr Chung said Hyundai was "almost dead" as a market for Hyundai but Italy was seen as a potential sales growth area. Hyundai predicts that it will sell between 200,000 and 300,000 cars in the US this year. It had 161 distributors in 31 states at the end of 1986 and will increase this number next year "radically". It is also planning to increase sales in Europe to between 18,000 and 19,000 this year.

Industry analysts expect Hyundai to export at least 250,000 cars to the US this year and about 400,000 in 1988.

However, Hyundai, whose vehicle building business is 15 per cent owned by Mitsubishi of Japan, is extremely nervous about the possibility of US protectionist measures.

That could have serious repercussions for a company that is so dependent on the North American market and which has talked of raising its production to more than 1m units by the early 1990s.

Mr Chung said he hoped import restrictions would not be introduced and added that the company will consider during the next one to two years the possibility of expanding production in the US. Hyundai is already building an assembly plant in Canada due to come on stream in 1988. The construction of this

plant, which will have a capacity of 100,000 cars, is on target. Sales of the Excel in Canada stood at 70,000 last year, which is below what the company had hoped, though it remains the leading car importer there.

"We will diversify our markets in the future," said Mr Chung. "Today we export to six countries but we will reduce our dependence on the US. We are looking at Latin America, the Middle East and more European countries."

Excel's retail for as low as \$5,185 in the US though the biggest sales are of Excel models costing \$7,400.

Hyundai is facing much stiffer competition in the domestic market as a result of expanding production by Daewoo Motor in which General Motors has a 50 per cent stake and the emergence of Kia this year as a car producer.

Mr Chung Se Yung, the newly appointed chairman of the Hyundai group

All these securities having been sold, this announcement appears as a matter of record only.

Ito-Yokado lifts group earnings by 9%

ITO-YOKADO, one of Japan's leading supermarket chain operators, lifted consolidated net profits by 9 per cent to ¥34,780m (\$244.3m) in the year to February reports Yoko Sakai from Tokyo.

The result came on turnover of ¥1,281.2bn, up 6 per cent, and reflected the performance of 22 subsidiaries including three key units listed on the Tokyo Stock Exchange—Seven-Eleven, Yoko-Benimaru and Denny's Japan.

	Sales	Pre-tax profit	Net profit
Group	1,281.2 (+6%)	103.99 (+10%)	34.78 (+9%)
Seven-Eleven	907.8 (+3%)	21.07 (+12%)	24.51 (+18%)
Yoko-Benimaru	211.5 (+15%)	31.25 (+22%)	14.44 (+24%)
Denny's Japan	97.9 (+4%)	4.69 (+21%)	2.22 (+20%)
	51.9 (+9%)	4.87 (+22%)	2.00 (+21%)

The three together with Ito-Yokado parent all plan to increase their dividends by 21 per cent in the current year. The parent company suffered from sluggish sales of clothing

and fresh foods, attributed in part to warm winter weather. This was offset by volume effects from the opening of four new outlets and a ¥350m increase in non-operating earn-

ings. At Seven-Eleven, turnover rose 15 per cent on the back of an increase in the number of franchised convenience stores to 310 and increased sales of magazines, cosmetics and other food items.

The company carried out a three-for-two stock split during the year and thus intends to adjust its dividend downwards from ¥36 to ¥23 per share. The payout for the current year is due to rise again to ¥34.

BBK breaks even for second successive year

BY OUR FINANCIAL STAFF

A SECOND successive year at break-even has been reported by Bank of Bahrain and Kuwait (BBK), one of Bahrain's two largest commercial banks, as provisions absorbed all surplus income.

Operating revenues were more than halved to 3.2m Bahraini dinars (\$8.5m) in 1986 from BD 7.8m, sums which in both periods were entirely committed to provide for bad and doubtful loans said to stem largely from Kuwait.

Net of provisions, loans and advances dropped 18.5 per cent to BD 450m while interest

income at BD 52.8m was 27.3 per cent lower.

Mr Hashid Zayani, the chairman, said earnings were adversely affected by lacklustre regional markets and limited new business opportunities. He said a number of loans had been restructured and the value of some BBK assets revised downward.

Last year, BBK called successfully on shareholders for BD 54m in new capital. The bank is half owned by Kuwaiti institutions and half by Bahrainis. Again, no dividend has been paid.

Datuk Keramat returns to profits and dividends

BY WONG KALONG IN KUALA LUMPUR

DATUK KERAMAT Holdings (DKH), one of Malaysia's two tin smelting companies, has reversed two years of losses and reported an operating profit of 5.3m ringgit (US\$2.1m) for the year to January. The operating loss the previous year was 6.4m ringgit. The company is restoring a dividend, of 57 cents per share.

DKH said that despite "continued market adversity," the group had improved earnings, in part due to a writeback of

some of the provision for doubtful debts, in respect of tin purchases made by a subsidiary on behalf of the International Tin Council. This was due to a rise in the tin price.

Group turnover fell from 444m ringgit to 177m ringgit. DKH also recorded an extraordinary profit of 13.4m ringgit arising from the sale of investments in mining companies, including its 16.4m shares in Malaysia Mining Corporation.

WATMOUGHS (HOLDINGS) PLC

Highlights for 1986

	Increase %	1986 \$'000	1985 \$'000
Turnover	33.5	41,121	30,802
Profit before tax	34.3	3,115	2,319
Retained profit	77.4	1,675	944

UK COMPANY NEWS

Final quarter boosts Guinness

BY CLIVE WOLMAN

Guinness, the international drinks company, yesterday announced pre-tax profits of £355m for the 15-month period to the end of 1986, including £14m in the last quarter of the year, on a turnover of £3.25bn. Provisions of £125m have been charged as extraordinary items to allow for the costs of what are described as "unusual transactions and arrangements" made during and after the takeover bid for Distillers, which subsequently led to an inquiry by the Department of Trade and Industry.

The results include those from Distillers from the date of its acquisition by Guinness, April 18, 1986, applying the standard acquisition, rather

than merger, accounting conventions. A second interim dividend of 5.95p per share net of Advance Corporation Tax (8.03p gross) will be paid on May 28. This was due to be paid on January 30 but was delayed because of the uncertainties arising from the DTI investigation.

A final dividend of 2.10p net (2.95p gross) will be recommended for payment on June 10. The total gross dividend for the 15-month period is therefore 14.06p compared with 10.25p for the 12 months to September 30, 1986.

The fully-diluted earnings per 25p share were 28.6p for the 12-month period to December, 1986 (36.6p for the 15-month

period) compared with 25.2p in the 12 months to September, 1985. The pre-forma earnings, incorporating the results of Distillers as if it had been acquired on January 1, 1986, were 27.4p on a fully-diluted basis.

Turnover for the 15-month period was £3.25bn and for the 12-month period to December, 1986, £2.73bn, compared with turnover of £1.99bn in the 12 months to September, 1985.

The trading profit for the 15-month period was £408m and £363m for the 12-month period, compared with £31m in 1984-85. The pre-tax profit figures were £355m, £314m and £38m respectively and the tax charges £106m, £94m and £28m.

The £314m figure includes a contribution, after finance charges and from Distillers and from Bells, the spirits company acquired in August 1985. Thus the pre-tax profits of the original Guinness businesses rose from £35m to £37m between the two 12-month periods.

The balance sheet shows an increase in debt, after setting out cash, deposits and short-term investments, from £332m to £757m. However, counting the convertible loan stock as debt, the ratio of debt to equity has only increased from 77 to 81 per cent between September 1985 and December 1986.

Great Southern defies declining death rate

BY ALICE RAWSTHORN

GREAT SOUTHERN GROUP, the funeral services and crematoria concern which went public on the USM in September, yesterday announced that it had beaten its prospectus forecast by increasing pre-tax profits by 25 per cent to £1.63m in 1986.

"These are the best results we have ever produced and more than meet our forecasts at the time of the flotation," said Mr Edward Field, Great Southern's chairman.

The group achieved this growth despite an unexpected decline in the death rate, which has fallen by an estimated 12.5 per cent in the first quarter of 1987.

future falls in the death rate.

Turnover increased to £12.38m (£11.22m) in 1986 and operating profits to £2.04m (£1.73m). The group paid £14,000 (£279,000) in interest—gearing stands at about 15 per cent—and £634,000 (£604,000) for taxation. Earnings per share rose to 12.3p (9.5p) and the board proposes a final dividend of 3.5p.

Within the funeral services division, where Great Southern carried out 20,000 funerals last year—making it the second-largest undertaker in the UK after the Co-op, the declining death rate has scuppered hopes for core growth and the group is reliant upon acquisitions.

In 1986 Great Southern

acquired four businesses, adding seven new branches. It has already concluded two purchases in the present year and is in "active negotiation" for a further seven.

Business increased in the crematoria division, which carried out 22,000 cremations during the year.

comment Great Southern Group has lapsed into a dull but worthy role within the macabre subsector of USM undertakers.

And its directors like it that way. Dullness and worth, they argue, will be of greater benefit in the traditional world of funeral parlours and monumental masonry than the flam-

boyance of Hodgson Holdings or the dynamism of Kenyon Securities. The stock market does not seem to agree. Great Southern's shares have yet to experience the same heady growth as Hodgson and Kenyon, but its investors can have few complaints. The value of their holdings has precisely doubled since the flotation after the share price rose by 5p to 270p yesterday. The death rate may be declining, but Great Southern has its interests in crematoria, pre-payment schemes and exhumation to compensate. Profits should rise to £2.1m or so this year, leaving the shares to move with the market on a prospective p/e of 20.5.

See L4

Austin Reed hits £6m and sees further rise

Austin Reed Group, clothing manufacturer and retailer, continued to progress through the second six months of 1986-87 and for the full year increased its profits from £5.04m to a record £6.1m pre-tax.

Furthermore, a good start was made to the new year with retail sales up 14 per cent after 10 weeks and factory production fully booked.

The directors said yesterday that a further advance in profits was expected.

Turnover for the past year, to January 31, pushed ahead from £80.94m to £84.61m and at the pre-tax level margins

showed an improvement from 8.27 per cent to 8.4 per cent. After tax of £5.22m (£4.61m) earnings per 25p share worked through 1.3p higher at 14.1p.

A final dividend of 4.5p on both the ordinary and "A" ordinary shares lifts the total by 1p to 8.5p net.

A loss of £382,000 on the sale of a subsidiary was treated below the line as an extraordinary provision. There was also a £113,000 (£90,000) appropriation to the profit-sharing scheme.

A revaluation of group properties at year-end threw up a surplus of £8.3m. The new

values will be incorporated in the accounts for the year.

comment Sitting between two sectors can sometimes pull profits in different directions but recent times have been good for both the textiles and retail sectors, giving Austin Reed a double boost in profits. After burning its fingers with the Cue stand-alone shops, Austin Reed is finding the in-house Options displays rather easier to handle.

Options should bring more growth this year and the group is also hoping for benefits from the programme of store refurbishment and from the sale of branded Austin Reed clothes to other outlets. The latter task will be made easier when the new factory comes on stream in the second half. Whether this year's growth is good or just satisfactory may depend on the dollar—licences income in the US and Japan added £1.5m last year—but £7m does not seem an impossible target. At 204p the A shares stand on a prospective p/e of 12.5, indicating that the market perceives the group as a textile rather than a stores group.

Yesterday, Hillards added 16p to 330p while Tesco put on 1p to 475p. At that level, the paper terms value Hillards at 315p with a cash alternative of 390.33p.

Last night, Mr Reid conceded that institutional shareholders are looking for a "modest" increase in the Tesco terms and said that the decision on whether or not to raise the bid would be taken shortly.

Hillards sees £15m profits for next year

By Nikki Tak

Hillards, the Yorkshire-based supermarket chain which is facing a £175m hostile bid from Tesco, yesterday hit back with a profits forecast of "not less than" £15m before tax in the year to end-April 1988.

The company has already forecast £16.5m for the current 52-week period to May 2 1987, against £15.5m in the previous 52 weeks, and the 1987/88 estimate would represent a 45 per cent increase on that. Most analysts had been predicting about £11.5m.

Hillards also estimated that earnings per share in 1987/88 will rise from the forecast 12.5p to 18.2p (18.1p on a fully-taxed basis), and says it intends to recommend a final dividend for the current year of 2.25p. That makes a total of 4p for 1986/87, an increase of 21 per cent over the previous year.

The forecast, however, was immediately criticised by Tesco.

"I'm astonished," said Mr David Reid, finance director. "It looks as if they've overcooked the goose. We can only assume they have tipped in the kitchen sink, or that they are going to hike prices."

The Tesco camp argues that in the latter case, profits would obviously suffer in the following year.

Hillards itself says the evidence will stem from productivity increases, its past investment in stores, raising selling space; plus its increasing emphasis on own-label lines and higher-margin goods. It also denies the growing competition—something Tesco has warned about—is a danger.

Yesterday, Hillards added 16p to 330p while Tesco put on 1p to 475p. At that level, the paper terms value Hillards at 315p with a cash alternative of 390.33p.

Last night, Mr Reid conceded that institutional shareholders are looking for a "modest" increase in the Tesco terms and said that the decision on whether or not to raise the bid would be taken shortly.

Aberdeen Steak

Aberdeen Steak House failed to publish its preliminary results for 1986 which were expected yesterday.

It is the second time the group has delayed the announcement of its results which were originally due on April 8.

No comment was available from the group last night.

Vaux to raise £61m as halfway profits rise 17%

BY MIKE SMITH

Vaux Group, the Sunderland brewer and hotels company, yesterday unveiled plans to raise £60.5m through a one-for-five rights issue and the issue of £25m of debenture stock.

The company, the shares of which rose strongly during the last year partly because of speculation that it may become the subject of a hostile bid, also revealed a pre-tax profits rise of 17.4 per cent to £7.5m in the 24 weeks to March 14. Turnover was 8.9 per cent ahead at £80.05m.

The interim dividend is lifted 12.4 per cent to 4.7p and the board forecasts a final dividend of 17.4p to 27.5p.

Shares in the company fell 10p to 565p.

Mr Paul Nicholson, chairman, said the 470p per share rights issue would raise £35.8m after expenses. The proceeds would be used mainly to acquire and develop hotels.

Last year the hotels division had contributed 49 per cent of the trading profits and the group planned to increase its number of hotels from 34 to more than 40 within five years.

A property valuation at the end of the year will produce a surplus over book value of

more than £50m, according to the directors. This, together with the other plans announced yesterday, will leave gearing at its present level of about 20 per cent, said Mr Nicholson.

Vaux intends to concentrate its hotels growth in the south-east of England, where occupancy and room rates tend to be higher. It expects to spend at least £40m during the next five years to fund investment opportunities, in addition to the £25m included in the £100m expenditure budget.

In the first six months of the year, breweries contributed £3.7m (£3.9m) to the group's £7.5m (£8.7m) trading profit. Hotels provided £3.3m (£2.7m) and wines and spirits £49,000 (£49,000).

Mr Nicholson said sales of draught lagers were well ahead during the period. For the first time for some years sales of draught ales did not decline. Packaged beer sales were also up.

comment

There was scepticism in the City yesterday about whether the rights issue was really necessary—gearing is hardly high at 20 per cent—but the call

on shareholders was viewed as a shrewd move. It enables Vaux to take advantage of its bid-inflated share price to raise money and the subsequent increase in market capitalisation will make the task of any prospective predator that much harder. The market clearly approved the plan to concentrate on the more lucrative hotels side of the business; it marked the shares down just 10p, in spite of the call on shareholders. But Vaux is clearly getting to grips with the problems posed by the maturity of the beer market, even if it was helped along the way by a price rise from local rival, Scottish and Newcastle. For full year pre-tax profits of about £11m are in view, putting the shares on a p/e of about 15.5. On fundamentals alone they would be expensive but there is little chance of the bid materialising going away, even if Vaux's takeover of the beer market was to sell its stake. As Mr Nicholson said yesterday the company has been at the centre of takeover speculation for 20 years and it may go on for another quarter of a century. The rights should be taken.

Stewart Wrightson expansion

BY NICK BUNKER

Stewart Wrightson, the big Lloyd's insurance broker, plans to expand in the becoming employee benefits consultancy business by buying Martin Patterson Associates, a 16-year-old London-based actuarial and benefits consulting company.

Talks between the two companies began "some months ago," said Mr George Boden, a Stewart Wrightson director. They are now "99.9 per cent certain" to lead to the creation of a new combined organisation called Patterson Wrightson, he added.

This will emerge from a union between Martin Patterson and

Stewart Wrightson Benefit Consultants, one of the broker's subsidiaries.

Mr Brian Mohr, a Martin Patterson director, said he hoped the deal would be concluded in early summer. He said that the company had realised that its small size had placed limits on its rate of growth. It had been approached by "a number of people" as possible suitors, including big well-known companies, before opting to join Stewart Wrightson.

Patterson Wrightson is expected to rank among the top six British benefits consultancies behind firms like E. Watson,

Bacon and Woodrow, and Towers Perrin, Forster and Crosby. Stewart Wrightson ranks 15th at present, Mr Boden said.

The move comes at a time when big general insurance houses on both sides of the Atlantic are keen to push deeper into employee benefits and pension consulting work. This is because they produce a stream of earnings unaffected by the underwriting cycles which control insurance broking income.

Stewart Wrightson's shares closed 3p down last night at 425p.

Martin Patterson expects to have 1987 fee income of about £3m, and employs about 80 people, making it about the same size as the Wrightson benefits consulting arm. It has about 600 clients, of whom about 400 are pension funds.

One attraction for Stewart Wrightson is that Martin Patterson has more securities, it is also a leading designer of employee share schemes via a subsidiary, Copeman Patterson.

Mr George Boden, a Martin Patterson director, was a founder member of the latter Share Ownership Council.

Wardle's new bid attacked

BY PHILIP COGGAN

Chamberlain Philips, the shoe components and adhesives group fighting a hostile bid from Wardle Stores yesterday issued a defence document in response to the increased 380p offer.

The Northamptonshire-based group reiterated its belief that the bid had no commercial logic and that it failed to reflect the group's profits forecast for the

coming year of £7.38m. Chamberlain has rallied unions and customers in its support in an attempt to beat off the budding conglomerate.

Wardle's offer, which closes on May 1, is seven of its shares for every 20 in Chamberlain. There is a cash alternative of 157p, compared with last night's closing price of 185p.

GUINNESS PLC

PRELIMINARY RESULTS
FOR 15 MONTHS TO 31st DECEMBER 1986

Continued Profit Growth

- * Profit before Tax for 15 months is £355 million, including £114 million for the last quarter.
- * Total net dividend of 10.2p for 15 months, up 13 per cent on an annualised basis.
- * Earnings per stock unit for the 15 months were 38.0p.
- * Group Debt/Equity Ratio at 81 per cent is similar to that prior to the acquisition of Distillers.

"The Group is now in a very favourable position. Guinness has the brands, it has the management and it has the opportunity to build on its achievements in the field of world-wide brand marketing. We will demonstrate that the enlarged and newly focused Group is a world leader in its industry."

Anthony Tennant
Group Chief Executive

The 1986 Annual Report will be posted on 5th May. A copy may be obtained by writing to:
The Registrar, Guinness PLC, 11/13 Walker Street, Edinburgh EH3 7NE

It's still our bread and butter

Over the years Britannia has enjoyed considerable success as a traditional building society.

We've steadily grown from 13 branch offices in 1960 to a national organisation with 245 offices across the UK.

Through times of great economic and social change.

So nobody has been better equipped than us to adapt to the new climate brought about by the Building Societies Act, 1986.

Already we're introducing new or improved services including consumer lending, stocks and share dealings, insurance and other financial products.

As our chairman, John Quipp was able to report in his annual statement.

"Britannia continues to thrive in an increasingly competitive environment."

"The society has attracted increased investment with a balance now standing at £3,969 million and share accounts numbering 1,171,144."

"Over £588 million was raised in the wholesale market, a very cost effective way of meeting strong demand for mortgage funds."

"Assets at 31st December were £4,212 million - up 17.5%. And general reserves increased by £28 million to £165 million."

Mr. Quipp continued by outlining the most recent development in Britannia services, in line with company policy to "introduce new products and new services only if they meet the needs of our customers. And only if our high standards are maintained."

"Our membership of the LINK consortium has made around 800 cash points available in the UK."

"Moneymaster was launched to offer a 24 hour cash facility, standing order and direct debit payments, chequebook, credit facility, a credit card option and personal loan scheme."

He finished with the assurance that despite the many opportunities and challenges ahead, Britannia would remain essentially a building society.

To prove the point he announced an increase in mortgage lending during 1986 from £862 million to £1,212 million.

"Having built 143 years of success on bricks and mortar, we're not going to undermine our foundations now."

UK COMPANY NEWS

Kwik Save expands 17% to £21.8m

Kwik Save Group, the discount food retailing group, reported a 17.1 per cent increase in pre-tax profits, from £18.58m to £21.76m, against an improvement of 11.1 per cent in sales for the 26 weeks to February 28.

Mr Ian Howe, the chairman, said that concessionaire rents, including Coleman Meat, rose from £3.65m to £4.08m but net interest fell from £1.58m to £0.50m.

By the end of the half year Kwik Save Stores was operating from 479 stores, 124 Best of Cellars units and 62 Arctic freezer centres, compared with 460, 113 and 50 respectively at the end of the last financial year, and had expanded its

sales area by approximately 5 per cent.

The Tate's subsidiary converted a further two food markets and wineries into Late Shoppers, bringing the total to 10. Mr Howe also said that a new distribution centre, opened in April, would enable existing and future stores to be serviced more economically.

The group had also agreed to purchase 23 stores from Dee Corporation which were expected to be converted to Kwik Save stores by the end of 1987.

He concluded with a note of caution, however. The group experienced several weeks of unofficial industrial action by Kwik Save distribution

employees during the period prior to Easter. The dispute had now been settled but it would have some adverse effect on the level of sales in the second half of the year.

Turnover in the first six months was £225.53m (£238.3m), including VAT, tax took £7.62m (£7.06m) leaving net profits of £14.14m (£11.82m) for earnings of 9.34p (7.64p) per share.

The interim dividend is increased from 1.5p to 2.1p; last year's total payment was 6p per share.

comment

Kwik Save's figures were characteristically good and the share price put on 6p to 271p, but at that level it is still lagging well behind its current

year high of 281p. The main reason for the caution is the industrial dispute which, though now resolved, has left stores short of stocks for about two months of the second half with a consequent impact on sales and profits. Analysts were trimming their current year forecasts from £48m to £47m or less yesterday, putting the shares on a prospective p/e multiple of 13. That suggests the price will sleep while, although it seems to understate the company's fundamental growth prospects against the sector, the market will want a firmer indication of just how difficult the second half has been before indulging in an upward re-rating.

Placing values Doeflex at £11m

By Richard Tomkins

Doeflex, the plastic products company seeking a stock market quotation, yesterday published the prospectus for a placing which will value it at £11.3m.

Lazard Brothers is placing 3.45m shares, or 41 per cent of the total equity, at 155p a share. Of the £47m proceeds, nearly £2.9m will go to existing shareholders and £1.5m net of expenses to the company.

Brokers to the issue are Phillips & Drew.

Doeflex makes plastic materials and semi-finished products for a range of markets. These include the construction and motor industries, packaging, domestic appliances, stationary, records and shoes.

It was bought out by its management in 1980 with the backing of CIN Industrial Investments. Some £90,000 of the flotation proceeds will be used to redeem the preference shares issued to CIN in the buy-out.

Pre-tax profits have risen from £247,000 in 1982 to £1.14m in the year to last December on turnover up from £8.9m to £18.3m.

There is no profit forecast for the current year so the company is coming to the market on an historic price/earnings multiple of 14.8.

Beaton Clark

Anglo-African Flammies has increased its stake in Beaton Clark, the Rotherham based glass and plastic bottle manufacturer, to 13 per cent.

The purchase of 165,000 ordinary shares by Anglo-African is on top of a 10.8 per cent stake acquired two weeks ago. Shares in Beaton Clark closed down 6p at 390.5p.

Camco lower in first quarter

Camco, the US-based oil services subsidiary of Pearson, reported a sharp fall in pre-tax income from \$1.6m to \$897,000 (£548,000) for the first quarter of 1987.

Net sales were lower at \$37.61m (\$50.17m). After tax of \$209,000 (\$315,000) profits were \$828,000 (\$1,09m). Earnings per share dropped from 15c to 8c, while the quarterly dividend is maintained at 11c.

The Camco board said the company's financial position continued to strengthen over the first three months of 1987. Working capital rose slightly despite a substantial reduction of inventory. In addition, management efforts to maximise cash flow had increased cash balances to almost \$30m at the end of March 1987.

Camco is a 66.4 per cent owned subsidiary of Pearson, which also owns the Financial Times.

Sun Life battle enters new phase

By Eric Short

THE BATTLE between Sun Life Assurance Society and its largest shareholder, Transatlantic Insurance Holdings, for board representation entered another phase yesterday.

Transatlantic, which holds 23.7 per cent of Sun Life, has written to all other shareholders urging them not to take any action until it has presented its case.

Last month, Transatlantic, after trying for some time without success to secure board representation with the approval of the existing board, nominated three of its own persons to stand for election to the board at the forthcoming AGM on May 13.

The reaction for the present board of Sun Life has been implacably hostile.

Until recently, Transatlantic was a subsidiary of Liberty Life Group of South Africa, the

largest quoted insurance and financial services group in that country.

Liberty's holding is now around 48 per cent, but its chairman, Mr Donald Gordon, is still chairman of Transatlantic.

Mr Peter Grant, chairman of Sun Life, last week wrote to shareholders claiming the move was an attempt by Liberty Life to gain control of Sun Life.

He claimed that having representatives of Transatlantic on the board would be divisive to the detriment of the group. He urged shareholders to return their proxy forms as soon as possible rejecting the proposals.

The letter from Donald Gordon deplores the emotive language and terms used by Sun Life, while asserting that Mr Grant has misrepresented the whole situation.

Transatlantic is not opposing the re-election of any existing directors. It is seeking to strengthen the board by filling existing vacancies.

He emphasised that Transatlantic

Atlantic was not a subsidiary of Liberty Life—its affairs in the UK are conducted by its own independent board.

Mr Gordon reasserts the claims that the proposed appointments would enhance the skills and strengths of the board. A further letter explaining how this could be brought about will be sent to shareholders next week.

Meanwhile, shareholders are urged not to do anything until they have read and considered this further communication.

However, Sun Life has made little attempt to hide the fact that it is seeking to keep out of Liberty Life's claims by finding a white knight to take over the group, if necessary. Several candidates have been suggested, including TSB.

Mr Middlemass, chief executive of Transatlantic, considers such actions by Sun Life as completely unnecessary.

But he did admit that in the last resort his company may be forced to mount its own bid to protect its position.

Royal Ins buys rest of Oyston

Royal Insurance has bought the rest of Blackpool-based Oyston Estate Agency, which has a network of 90 offices. It acquired 94.5 per cent in July last year.

Royal did not disclose the total consideration, to be satisfied by the issue of 1,000 shares and cash.

Its shares closed up 7p at 89.5p.

Royal Insurance has interests in 441 estate agencies in the UK. Its usual policy is to take a substantial holding but ensure the original proprietors retain an equity stake with freedom to manage and develop the business.

THE STORY OF A TRANSFORMATION AS TOLD BY THE PROFITS

Hestair announced yesterday the purchase of three U.S. employment service companies (America's third fastest growing industry), Talent Tree, First Temporaries and Team Services.

Together they have 64 branches nationwide, located in some of America's fastest growing areas. Each is profitable and growing fast. 1987 sales are forecast at \$94 million. Others will follow.

Back in 1984, 62% of our £115 million sales came from vehicle engineering and farm equipment; markets lacking in growth and profitability. The other 38% was

in profitable growth markets, employment services and consumer products.

We decided to take action. We disengaged from farm equipment and reconstructed the vehicle division. We accelerated the growth in employment services and consumer products, organically and by acquisition.

As a result, today's profits are more than four times the 1984 level.

The acquisitions in the U.S.A. mark the latest stage in the transformation of the group which now has an annual rate of sales of £210 million, with 70% of it coming from employment services and consumer products.

We are now amongst the very largest employment agency companies in the world.

The new year has started exceptionally well, and by the way, the engineering division is coming along very nicely too.

UK COMPANY NEWS

Hestair surges to £7.3m and makes US acquisitions

BY RICHARD TOMKINS

Hestair yesterday marked a further stage in its transformation from industrial holding company to consumer services group with the news that it is to buy three US employment agencies for an initial \$18.4m (£10.1m).

The company also produced the widely-predicted surge in pre-tax profits from \$2.1m to \$7.3m for the year to end January 1987, on turnover up from £18.2m to £26.5m. The 1986 figures have been restated to include JSD, the computer personnel agency acquired last June, on a merger accounting basis.

After a tax charge of £780,000 (£945,000), earnings per share rose to 18.1p (10.6p). There was an extraordinary loss of £1.7m (£1.8m) relating to the disposal of the farm equipment division. The three companies being bought are Talent Tree, First Temporaries and Team Services, which between them have 64 branches. The acquisitions are intended to provide a platform for the development of a major personnel service operation across the US.

The initial consideration will be met through the issue of 4.9m shares, of which 4.4m shares, of which \$87,000 will be kept by the vendors and the rest placed by Hill Samuel at 205p a share.

Hestair said it had had an excellent start to the current year and had decided to recom-

DIVISIONAL ANALYSIS OF PROFIT

	1986	1985
Service	7,987	7,987
Consumer Products	4,898	2,729
Engineering	1,862	1,211
Discontinued	9,376	6,548
Interest	1,741	2,734
Central costs	560	381
Group	7,329	4,101

mend a final dividend of 2.8p, making a total of 4.5p (3.85p). That compares with the 4.5p forecast when the company made its rights issue last April.

All three of Hestair's divisions improved profitability but the driving force came from services, which benefited from good trading conditions for employment agencies. JSD had particularly buoyant sales in Europe, and the division as a whole increased profits by 86 per cent.

Consumer products also performed strongly, increasing profits by 34 per cent. Hestair Hope enjoyed buoyant sales from consumer stationery and the mail order catalogue, and Kididirect resumed profits growth on a 32 per cent increase in sales.

The engineering division increased profits by 124 per cent, most of which came in the

second half as the costs of reorganisation began to recede.

Comment

The prospect of a 12.5 per cent increase in Hestair's issued equity gave the company's share price an early battering but it soon recovered as the ramifications of the US expansion began to seep in, and closed only 1p down at 218p. The effect of the latest acquisitions will be to increase the contribution of the employment services and consumer products parts of the business to 70 per cent of total group profits, leaving engineering at 30 per cent — an almost exact reversal of the position four years ago. The market does not appear to have quite caught up with what is happening at Hestair. With net borrowings extinguished and the prospect of another good year from the engineering division, the latest acquisitions should give the group little difficulty in reaching around £11.5m next time. That puts the shares on a prospective p/e multiple of under 12, a level which is an increase in the tax charge to 18 per cent. A rating that low is yielding a couple of points to the multi-conglomerates, let alone the likes of Elise Arrow.

The engineering division increased profits by 124 per cent, most of which came in the

second half as the costs of reorganisation began to recede.

Consumer products also performed strongly, increasing profits by 34 per cent. Hestair Hope enjoyed buoyant sales from consumer stationery and the mail order catalogue, and Kididirect resumed profits growth on a 32 per cent increase in sales.

The engineering division increased profits by 124 per cent, most of which came in the

Whatman Reeve close to £7m

Whatman Reeve Anglo, manufacturer and marketer of laboratory supplies, announced yesterday that it had increased its 1986 profits by 20 per cent at the pre-tax level and that it had made a good start to the new year.

The current state of the group's major market, the US, and in particular the weakness of the dollar, was giving cause for some concern but unless there was a marked deterioration in the US economy satisfactory growth was expected to continue in 1987 and in the years ahead.

For 1986 group turnover improved from \$31.64m to

\$35.34m and trading profits pushed ahead by \$1.15m to \$7.12m.

Pre-tax profits showed an improvement of \$1.15m at \$7.12m after taking account of interest charges of \$52,000 (£105,000) and a \$31,000 (£255,000) provision to the employee share scheme.

Tax took \$1.57m (£3,33m) and extraordinary items \$96,000 (£255,000). Basic earnings worked through at 19.34p (14.35p); fully diluted the figure was 18.05p (13.94p). A final dividend of 2.1p was declared and a 2.45p to 3.1p per share.

The balance division had a good year despite the relatively

slow growth of the US economy and the continuing weakness of the electronics industry, one of the division's more important customers.

Whatman International made good progress during 1986 although growth by the laboratory dealer business, especially in the US, was limited by the nature of its longer established product lines.

The other three businesses in the division all performed well. The industrial biotechnology business had an encouraging year and the custom manufacturing business made excellent progress.

Lilleshall boosted by property disposals

Lilleshall, the steel stockholder, property developer and

factory distributor, increased its pre-tax profit by £200,000 to £372,000 in 1986, but only after crediting exceptional items of £30,000 from profits arising on the disposal of properties.

The directors said that the company had suffered a steady decline in its trading activities over the years. He believed that it had now secured a base for future growth. The company intended to achieve this by developing and improving existing activities and by acquisition.

The current year had started ahead of the 1986 position.

Turnover for the year rose from \$9.24m to \$9.51m but operating profits fell from \$259,000 to \$243,000 and interest payable was \$34,000 up at \$201,000. Tax took just \$5,000 (£24,000) and there were no extraordinary credits this time (£25,000).

Stated earnings per share were 16.4p (8.4p) on a net basis and the total dividend is unchanged at 2.25p with a final of 1.5p (same).

Floyd Oil share stakes

As a result of a recent open offer and placing of stock in Floyd Oil, Bricoma Investments, a subsidiary of British and Commonwealth Holdings, now beneficially holds 9.15 per cent of the company.

Directors have had the following dealings in Floyd shares as a result of, or in connection with, the open offer: J. E. E. Floyd, on April 16 1987 took up 561,047 shares and on the same date sold 641,047 shares (beneficially). He also took up on April 16, 1987 18,581 shares and sold a like amount on the same date (non-beneficial). J. A.

Winter, on April 16, took up 20,000 shares and sold 16,000 on March 26; L. R. E. Gow took up 1,333 shares on April 16 and C. J. Spence, the same date took up 12,856 shares. J. D. M. Cooper bought 10,000 shares on April 16 also.

On April 23 1987 the following directors were offered options to subscribe for ordinary under executive share option scheme: J. E. E. Floyd, 250,000; J. R. Winter, 200,000; J. D. M. Cooper, 150,000. All these options will be exercisable at 45p per share.

Hawley bid for BCA unconditional

Hawley Group, Mr. Michael Ashcroft's services group, now domiciled in Bermuda, has declared its agreed offer for British Car Auction Group unconditional.

Yesterday, Hawley, which already controlled 14.8 per cent of BCA, said that it had received acceptance in respect of 34.66m ordinary and 10,173 of the 3.5 per cent preference, giving it 59.2 and 19.4 per cent of each class respectively.

The ordinary offer, five Hawley common shares for every three BCA shares, remained open until further notice. Hawley said the preference offer would close in 14 days.

Mr. David Wickens, chairman of BCA, yesterday also announced details of a series of personal share transactions in BCA Group which had previously been omitted from the offer document.

Wigfalls suspended

Shares in Wigfalls, the electrical retail and rental group, were suspended yesterday at the company's request, pending an announcement due today.

On Tuesday, Ruslake Holdings, the private company owned by the Jivraj family, increased its stake in the group to 14.5 per cent. Ruslake recently sold its interest in London Park Hotels for \$38m.

Weather slows profit growth at Etam - £5m SNOB deal

Etam, the fashion retailer, yesterday unveiled a modest 1.7 per cent increase in pre-tax profits to £12.28m, after a year of sluggish sales because of adverse weather. It also announced the acquisition of the SNOB chain of fashion shops for \$5.4m from Coutwell, a privately owned fashion company.

The SNOB chain, which encompasses 13 shops and one concession, will continue to trade under its own name within the Etam group. Etam will thus

earnings per share rose to 14.74p (14.34p). The board proposes to pay a final dividend of 3.4p making a total of 4.7p (4.25p).

Etam opened nine new shops during the year and now trades from 126 outlets. It is in the process of negotiating for eight new units and expects to operate from 133 shops by the end of the present year.

A daily spring followed by a mild autumn is not the most inspiring scenario for a fashion retailer, but Etam has a succession of respectable results behind it and had been sensitive enough to forewarn the stock market. In any case all the interest in the company has centred on its acquisition potential. Etam's mounting cash pile, coupled with concern that the core business was rapidly approaching saturation, has caused disquiet ever since the acquisition of SNOB. Etam finally delivered its prey. The City seemed to approve and the share price surged by 23p to 265p. Given that sales have recovered and store openings proceed apace, profits should rise to £15m in the present year, putting the company on a prospective p/e of 18. Undemanding.

Etam says that sales have regained momentum in the opening months of the present year and are now running ahead of target with growth of at least 25 per cent.

Group turnover rose to \$78.41m (\$71.21m) and gross profit to £14.03m (£12.65m) in the year to January 31. Administration expenses increased to £1.9m (£1.6m), while income lessed assets fell to £13,000 (\$25,000) and interest receivable to £500,000 (£1,03m).

Interest payable increased to £298,000 (£5,000) and income from property disposals fell to \$9,000 (\$346,000).

Despite sluggish sales Etam improved the efficiency of its cost and stock control, thereby increasing gross margins. Taxation was static at \$5.58m, and turnover and profit this year.

BANQUE INTERNATIONALE A LUXEMBOURG S.A.

NOTICE TO HOLDERS OF INTERNATIONAL DEPOSITARY RECEIPTS for Ordinary shares in EUROMONEY PUBLICATIONS PLC

Issue of definitive International Depositary Receipts ("IDRs")

NOTICE IS HEREBY GIVEN that completion of the distribution of all the ordinary shares of Euromoney Publications PLC in the form of IDRs, and pursuant to the offer dated 11th June 1986 took place on 17th February 1987. Accordingly definitive IDRs will be available from 17th May 1987 through Euro-clear or Cedeal. IDRs holders should note that bearer instrument duty will be chargeable on any transfer (including negotiation) of an IDR to Great Britain.

Notices and Accounts

The duties of Banque Internationale a Luxembourg S.A. ("BIL") to give notice by advertisement in the press of general meetings of the Company and of the availability of copies of its audited accounts for each financial year are set out in the definitive IDRs. However, although IDRs holders do not have any contractual relationship with Euromoney Publications PLC ("Euromoney"), the Board of Directors of Euromoney has decided to permit IDRs holders to deposit an address with Euromoney to which he will be sent notices of meetings and of the audited accounts for each financial year at the same time as such notices and accounts are sent to Euromoney's registered shareholders. IDRs holders wishing to avail themselves of this facility should write to the Secretary, Euromoney Publications, Nestor House, Parkway, London EC4A 3UA, on or before 10.30 a.m. on 15th May 1987. In the absence of renewal of the facility will lapse and notices and accounts will not thereafter be sent to the relevant address. Euromoney shall not be under any liability to any IDR holder for the accidental failure, delay, or omission to send notices or accounts to an address deposited by an IDR holder under these arrangements.

IDRs holders should note that, in accordance with the terms and conditions set out in the definitive IDRs, they are not entitled to vote at general meetings although they may by deposit of the definitive IDR with BIL or one of its authorised agents, give written directions to BIL as to how to vote in relation to the shares represented in the IDR and to be exercised. Although IDRs holders are not entitled to vote they may attend and speak at general meetings of Euromoney.

Extraordinary General Meeting of Euromoney Publications PLC

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the above named Company will be held at the Boardroom, Associated Newspapers Holdings PLC, Carmelite House, Carmelite Street, London EC4A 3UA, on 20th May 1987 at 2.00 p.m. for the purpose of considering and, if thought fit, passing the following resolution which will be proposed as a Special Resolution:

SPECIAL RESOLUTION

THAT the Share Premium Account of the Company be and is hereby cancelled.

By order of the Board
P. S. Gault
Secretary
Dated 24th April 1987

Registered Office
Carmelite House
Carmelite Street
LONDON EC4A 3UA

Notices
(1) Holders of international depositary receipts ("IDRs") in respect of ordinary shares in the Company may give directions through Euro-clear or Cedeal as to how to exercise rights of the ordinary shares represented in their IDRs should be exercised. Such instructions must be received by Banque Internationale a Luxembourg S.A. no later than 10.30 a.m. on 15th May 1987. Holders of IDRs may attend the Extraordinary General Meeting but may not vote on the resolution to be proposed.
(2) A copy of the Chairman's letter to members explaining the reasons for the proposed special resolution can be obtained by holders of IDRs from the registered office of the Company or from Banque Internationale a Luxembourg S.A. at 2 Boulevard Royal 2553, Luxembourg.

April 1987

We're creating 10,000 jobs.

So that you'll enjoy shopping.

And we can create more jobs.

At Tesco we plan to spend £500m on superstore development during the next two years.

With this will come the creation of 10,000 new jobs, bringing the total workforce figure to over 70,000. Each new superstore will be built with customer care in mind. A free car park, air conditioning, numerous checkouts and wide aisles will be standard. Every store will also take into consideration the needs and tastes of the local community.

We believe profitable growth will be achieved through the development of new stores. This will enable us to invest more in the future. And to create more jobs.

TESCO

Making an investment in quality.

ASTRA GROUP HIGHLIGHTS FOR 1986

- Earnings increased faster than sales for the ninth year in succession.
- Registration applications filed in a number of countries for Loscec (antipeptic ulcer agent) and Plendil (antihypertensive agent) - two entirely new drugs resulting from Astra's research.
- West Germany overtakes Sweden as the Group's largest single market.

	1986 SEKm	1985 SEKm
Sales	4,960	4,436
Licensing income	390	384
Earnings after financial income and expenses and minority interests	1,182	1,041
Employees share in profits	(31)	(30)
Earnings per share after theoretical tax* (SEK)	19.85	18.40
Dividend per share (1986 proposed) (SEK)	3.75	3.00

*Theoretical tax includes items that would have been paid on earnings, if no tax credit had been taken through appropriations to retained reserves.

NOTICE OF ANNUAL GENERAL MEETING

Shareholders are hereby notified that the Annual General Meeting of AB Astra will be held at 8 p.m. on Wednesday, May 13, 1987 in Folkets Hus, Järnagatan 26, Södertälje, Sweden.

NOTICE OF ATTENDANCE

Shareholders of record in the shareholders' register kept by Värdepapperscentralen VPC AB (Swedish Securities Register Centre) on Thursday, 30th April, 1987 will be entitled to participate at the Annual General Meeting. In order to participate shareholders must also notify the Company of their intention to attend no later than 3.00 p.m. on Friday, 8th May, 1987, by mail, addressed to the Board of Directors, AB Astra, S-151 85 Södertälje, Sweden, or by telephone, by calling Int. +46-735-32990, extension 1516.

Shareholders whose shares are registered in nominee names must, if they wish to be entitled to participate in the Meeting, temporarily re-register their shares in their own names. Such re-registration must be effected not later than Thursday, 30th April, 1987.

A shareholder may amend and vote at the Meeting in person or by proxy but, in accordance with Swedish practice, the Company does not send forms of proxy to its shareholders. Shareholders wishing to vote by proxy should submit their own forms of proxy to the Company.

AGENDA

1. Matters required by the Company's Articles of Association to be set before the Annual General Meeting.
2. A proposal by the Board to reduce the par value of the Company's shares from 25 kronor per share to 12.50 kronor per share by a 2-for-1 stock split and to amend Section 5 of the Articles of Association in consequence.
3. A proposal by the Board to create two classes of shares - Class A, carrying one vote per share, and Class B, carrying one-tenth of a vote per share - and to amend Section 4 of the Articles of Association in consequence.
4. A proposal by the Board to redesignate the 60,185,172 shares outstanding following the stock split as Class A shares.
5. A proposal by the Board to amend Section 13 of the Articles of Association to the effect that the maximum proportion of unrestricted shares should be altered to 40 percent of the Company's entire share capital and to 22.5 percent of the voting rights of the total number of shares outstanding.
6. A proposal by the Board to increase the Company's share capital from 752,314,650 kronor to 802,777,575 kronor by means of a bonus issue under which a holder of every five restricted and/or unrestricted shares of 12.50 kronor par value each following the stock split would receive one new unrestricted Class B share. The Board proposes 9th June, 1987 as the record date for both the bonus issue and the stock split. The implementation of the bonus issue is conditional upon the Swedish Government's approval of the amendment to Section 13 of the Company's Articles of Association.

DIVIDEND

The Board proposes Monday, 18th May, 1987 as the record date for entitlement to the dividend proposed in respect of 1986. Subject to the approval of the Board's proposal by the Meeting, dividends are expected to be mailed by Värdepapperscentralen VPC AB on 25th May, 1987.

STOCK SPLIT AND BONUS ISSUE

Subject to the approval in General Meeting of the proposed stock split and bonus issue, and the approval of the Swedish Government of the proposed bonus issue,

- the Company's shares will be traded, with the new par value and ex the bonus issue, on the Stockholm and the London Stock Exchanges from the opening of business on Thursday, 4th June, 1987.
- full particulars relating to the stock split and exchange of share certificates will be mailed to shareholders not later than 11th June, 1987;
- the exchange of old share certificates for new will commence on Monday, 15th June, 1987;
- information about the bonus issue, the unrestricted Class B shares, and scrip certificates will be mailed to shareholders not later than 24th June, 1987; and
- the unrestricted Class B shares are expected to be quoted on the Stockholm Stock Exchange on 25th June, 1987.

Södertälje, Sweden, April 1987
BOARD OF DIRECTORS

UK COMPANY NEWS

Sunlight Services reaches £6.6m after 26% growth

ALTHOUGH second-half profits at Sunlight Services Group showed a smaller increase than in the first half, the pre-tax result for 1986 as a whole was up by 26 per cent to a record £6.6m against £5.2m.

Turnover for this cleaning and security group moved ahead 15 per cent from £87.5m to £100.7m.

As indicated in the interim report, the dividend for the year is lifted to 10p (9p), with a lower final of 6.5p (7.5p). Earnings rose by 1.6p to 20.0p per 10p share.

Commenting on the results, Mr J. A. Franks, the chairman, said that with the sound performance in 1986, a strong financial base, stable management and an encouraging start to the

current year, he looked forward to a period of continued development and growth for shareholders.

After tax of £2.25m (£1.8m), extraordinary credits of £592,000 (£17,000 debit) and preference dividends again taking £26,000, attributable profits emerged £1.33m ahead at £4.8m.

Dividends took £2.15m (£1.93m).

Stubbins states can prove a headache for any laundry and despite a lot of scrubbing, the office cleaning business is still proving a blot on Sunlight's profits performance.

The dividend also made virtually no return on £12m of turnover last year; the company would probably be delighted if it made half a million in this. Profit growth across the group was not that exciting, given that the acquisition of Custodian added £300,000 post-interest and there was a further £250,000 benefit from the fall in the interest charge. But the textile maintenance division probably did well to increase profits by 10 per cent in a year when hotels were suffering from the Listeria and Chernobyl factors. The solidity of Sunlight's earnings should be no surprise, given that around 66 per cent of its revenues come from recurring annual rental income. Add in the solid yield of 4.3 per cent and the shares at 244p might make a good defensive stock for those concerned about a bear market.

William Low profits hit by sharp rise in interest charges

William Low & Co, the Scottish supermarket and freezer centre group, lifted pre-tax from £3.02m to £3.44m on turnover up from £125.50m to £131.1m in the 26 weeks to March 21.

However, the profits figure was struck after interest charges of £814,000 (£25,000) after capitalising £878,000 (£238,000) of interest on borrowings incurred to finance the group's development programme.

The increase in turnover, taken after allowing for closures, was largely attributable to new store openings but also to an increase in trading volumes on a like-for-like basis.

The directors said that operating margins had also improved, reflecting the growing contribution from major new stores. They stressed that the group's current development programme was fundamental to its long-term strategy.

Since the financial year end on September 6, 1986, Low reported a 16 per cent rise in pre-tax profits to £7.25m

(£8.27m) for the year—the company had opened major new stores at Inverurie and Dunbar in Scotland and at Gooch and Consett as part of its firm programme of expansion into England.

By the end of the current year, Low will have added new stores in Inverurie, Stranraer and Felling, providing a net additional 30,000 sq ft of selling area for the year.

The directors said that next year the company intended to open a further eight stores, adding another 120,000 sq ft.

Over the two-year period there would be a gain in net selling area of 35 per cent and the directors added that operating results were continuing to improve in the development cycle. They expected a satisfactory outcome for the full year.

Tax charges fell to £1.03m (£1.06m) and earnings worked through up 3.45p at 18.44p. The declared interim is raised 0.5p to 5p.

USM placing for UCL

BY ALICE RAWTHORN

The UCL Group yesterday emerged as the latest recruit to the electronics sector by unveiling plans to join the United Securities Market in a placing of £5m.

Since it was founded seven years ago the UCL Group has expanded from its South London base to develop a vertical operation encompassing hardware and software supply with a support and maintenance service.

After the flotation the group intends to embark upon acquisitions, chiefly in the areas

of computer maintenance and software packaging. Mr Nicholas Dreacher, UCL's chairman and managing director, said that although the company has been able to engage in acquisitions as a private concern, going public would increase its flexibility to do so.

In the placing, through Capel-Cure Wye, the group will issue 1m shares, or 12.5 per cent of its equity, at 125p a share. All the proceeds of the issue will be ploughed back into the company. At the placing the UCL's earnings per share for 1986 are 7p and the p/e is 17.75.

Hartons profits advance 34%

Hartons Group, international plastics, distribution and manufacturing concerns, yesterday announced pre-tax profits up 34 per cent to £2.54m for 1986, compared with a previous £1.89m. While profits on its continuing activities reached a record £1.5m (£1.54m), losses on the discontinued activity increased to £84,000 (£87,000).

Discontinued activities related to DIP, the group's gas and electrical appliances maker which was sold in July. Proceeds from the sale of its net assets amounted to £1.5m, resulting in a loss on disposal of £2.1m, which has been treated as an extraordinary item.

The directors are recommending an increased final dividend of 1.07p (0.82p), making a total for the year of 1.6p (1.27p). Earnings per 5p share fell from 3.31p to 3.19p.

Mr Mar Mainman, chairman, said that the principal activities had continued to forge ahead during the year. Greater impetus to that growth would now be possible, he added, due to the divestment of DIP, the raising of £5.2m through

the November rights issue. The directors were convinced, he said, that the underlying strength of the group's operating companies and the investment of over £6m on acquisitions and new plant would not only allow Hartons to report its sixth successive year of profit advancement in 1987 but also achieve faster growth in future years.

Group turnover for the year moved ahead to £99.88m (£93.53m), with continuing activity contributing £56.64m (£45.51m).

Further expansion by Expamet

BY GRAHAM DILLON

Expamet International, supplier of components and services to industrial building and security markets, is to take another step in its planned diversification strategy through the acquisition of Christie Hydraulics in a £3.24m deal.

Christie, a manufacturer of hydraulic accumulators, made pre-tax profits of £52,000 in the year to and June 1986. Net assets at that time were valued at £1.01m.

The acquisition, which also includes Christie's Australian subsidiary, is to be financed by the issue of 1.71m Expamet shares, 108,075 of which are to be retained by the vendors. The remainder will be placed by

Greenwell Morgan at 150p per share. Expamet said that an additional consideration may be payable in April 1990 based on an improved profits performance in 1986 and 1987.

Hydraulic accumulators are used by defence, aerospace, automotive and oil and gas industries. They are a vital component of fluid systems for energy storage or surge control and pulsation dampening applications.

Expamet entered this field last year via the purchase of Olier-Fawcett-Roth from Thorn EMI in a £7.92m cash deal. Christie was founded in 1973

by former directors of Fawcett. Expamet said it saw considerable benefits of co-operation between the two companies. A dominant position in both the UK and Australian accumulator markets would be reinforced by benefits in technical research and development as well as marketing and overhead costs.

Mr Alex Orr, Expamet managing director, said: "We can see clear commercial and industrial benefits in this acquisition."

"It follows our proven formula—17 acquisitions in three years—for purchases within our specific areas of expertise where Expamet can add value to the acquired company."

IN BRIEF

WOODHOUSE AND RIXSON (Holdings): Annual meeting told that the steady improvement outlined at the time of the preliminary statement had increased in pace to date. Improved activity in aerospace and mining sectors had been confirmed and there were signs that oil sector was awakening. Together these factors gave further grounds for confidence in the outcome for 1987 as a whole. The acquisition of Shiloh Forge was completed earlier this month.

CAROTEC (USM automotive components and plastics group): Pre-tax profits for half year to February 28 1987 were £39,000 (£36,000) after £43,000 (nil) exceptional items. Turnover £2m (£1.75m). Earnings per 10p share 1.1p (0.9p) and interim dividend 0.65p.

INVESTORS Capital Trust (investment trust): Net asset value per 25p ordinary share 407.5p (£55.5p) at halfway stage on May 1987. Interim payment 5p (1.5p); second interim payment 3.15p (2.7p).

BULLERS has agreed to buy G. W. Lunt & Son a producer of metal art pieces and its finishing arm, I.Y. Fine Products for an initial cash consideration of £1m plus further payment depending on the profit of the Lunt group in the years ending December 31 1987 and 1988.

FINEAPPLE GROUP has bought Keymarket Out and Above holiday promotion and incentive business, for an initial £100,000 satisfied by the issue of 116,000 shares which have been placed. There will be a further profit-related consideration partly in cash or loan notes and partly in shares. In the 11 months to the end of March 1987 Keymarket had pre-tax profits of £23,216 and net assets at the end of the period of £80,000.

STEELE BROTHERS Holdings' subsidiary Becorit has strengthened its position as a major supplier of mining equipment to the coal industry through the acquisition of Wulter Machine Company from Hampton Gold Mining Areas.

1986 PROFITS UP 30%

The Board of Directors of ACCOR, meeting on April 10, 1987, closed the accounts for the 1986 fiscal year.

The Group's share of after-tax consolidated net income amounted to FFr 235.6 million. Excluding exceptional items, net earnings for the year were FFr 231.5 million against FFr 178.2 million in 1985, an increase of 29.9%. Cash flow for the year amounted to FFr 729.6 million, 33% higher than in 1985. Including the 2,042,067 shares issued during the year (convertible bond conversions, exercise of warrants, reinvestment of dividends in shares), after-tax earnings per share before exceptional items amounted to FFr 21.35 against FFr 19.04 the previous year, an increase of 12.1%.

Consolidated sales amounted to FFr 12,935 million, 45% of which were generated abroad, thus experiencing growth of some 11% on a comparable year-to-year basis.

Parent Company sales excluding taxes amounted to FFr 975 million and net income to FFr 147.1 million, including FFr 45 million in non-recurring capital gains. The Annual Shareholders' Meeting, to be held May 26, will be asked to declare a dividend of FFr 6.50 per share (plus a tax credit), 12.1% higher than that paid out for 1985.

These results are in the upper range of what was forecast despite the number and the dimensions of the difficulties affecting the industry — a lower dollar, terrorism, disaffection of American tourists for Europe, economic difficulties in Africa and the Near East, the Cruzado plan in Brazil. This performance demonstrates the merits of ACCOR's policy of diversifying core business products and the geographical distribution of operations, as well as its teams' capabilities of fast reaction in the face of such events.

The Group continued to pursue growth with 58 hotel openings in 1986 and 62 under construction at January 1, 1987. At this date, hotels in operation and under construction counted over 70,000 rooms for 600 hotels. In the commercial restaurants and institutional food services sectors, 200 units were

opened, bringing the total number of Group restaurants to nearly 2,000. Meal and other service vouchers issued and used daily rose 17% to further strengthen ACCOR's position as the world's leader in this field.

Results for the first months of 1987 are in line with forecasts and the Group's growth objectives.

A STRONGER CAPITAL BASE

At the same meeting, the Board of Directors of ACCOR voted to convene an Extraordinary General Meeting of the shareholders to approve a capital increase through issue of 2,516,000 shares at FFr 532 per share, representing FFr 1,338.5 million in new equity.

SUEZ TO TAKE A STAKE IN ACCOR

Purchase of these new shares would be reserved to Compagnie Financière de Suez, with which ACCOR has a long-standing relationship, to Société Générale, Paribas, BNP and UAP, all currently shareholders and Board members and to Crédit Lyonnais. The Board's decision was unanimous because the offering, priced near the current market price, would both substantially strengthen equity and bring to ACCOR the support of France's prestigious financial institutions. This support would contribute to the Group's international growth and provide dynamic backing for its strategy.

After completion of this transaction, ACCOR's principal shareholders would be:

—Compagnie Financière de Suez	10.5%
—Caisse Centrale des Mutuelles Agricoles	6.3%
—Société Générale	5.3%
and Paribas, UAP, BNP, Caisse des Dépôts et Consignations, Banque Louis-Dreyfus, Crédit Lyonnais, Crédit du Nord, BUE and Messrs. DUBRULE and PELLISSON, the co-chairmen.	

Compagnie Financière de Suez would be represented on the Board of Directors and ACCOR's Associate Board respectively by the Governor, Mr. Renaud de la GENIERE, and by Mr. Gérard WORMS.

If approved, this capital increase will be completed by the issue of stock purchase warrants to the benefit of all shareholders for subscription to a new share offering to be subscribed before end 1989 or end 1990. The detailed terms and conditions for this issue will be decided after the Extraordinary General Meeting, to be held in principle on May 26, pronounces on the resolutions submitted to it. These terms and conditions will be set out in a prospectus submitted to the approval of the C.O.B., the French securities regulatory commission. The rights attaching to the 1983 French franc-denominated and 1984 US dollar-denominated convertible bonds as well as those of C warrant holders (issued 1985, maturing end 1987) will of course be preserved.

This advertisement is issued in compliance with the requirements of the Council of The Stock Exchange.

UK COMPANY NEWS

Chrysalis profits more than doubled at £5m

Chrysalis Group, the growing entertainment and leisure services group, more than doubled pre-tax profits from £2.42m to £5.04m in the six months to December 31, 1986, on turnover up over 50 per cent to £28.6m.

Mr Chris Wright, chairman, said the results reflected substantially increased profit contributions from major trading activities. This followed the indication given at the AGM in January that all mainstream divisions had been trading ahead of budget.

The record companies, in particular, had shown significantly improved performance, benefiting to some extent from a product release schedule biased towards the first half.

This, together with impressive results from Lingo, the wholesale export business acquired in 1985, had resulted in a doubling of the profit contribution from the records division.

Profits from the machines division had also shown solid

growth.

"Taken with current trading, these results put the group as a whole on course to meet its targeted profit for the year," Mr Wright added.

Earnings per 10p share advanced from 6.39p to 12.53p and the interim dividend is maintained at 3p net — last year's total was 5.0p on £3.11m pre-tax profit.

The interim figures included an extraordinary profit of £7.01m (£38,951 loss) which represented the surplus arising after tax, on the sale of Kingsmead Hotels. Included within the surplus is a transfer from revaluation reserves of £5.5m.

Tax charge was £1.59m (£0.78m) and after the extraordinary item and minorities, the attributable surplus leapt from £1.61m to £10.35m.

Comment

Chrysalis has taken a firm grasp of the volatile record industry. Its impressive profits growth reflects a broadening of

its stable of pop stars, good management and a policy of developing related businesses. This has given a firm base for further expansion. The interim figures were helped by strong pre-Christmas record sales from Billy Idol, Huey Lewis and the News, and the Housemartins. In the second half the group is concentrating on less well known names which means the growth rate is unlikely to be sustained but Chrysalis has a reputation for picking artists that sell well for a number of years. The full year will also see a profits contribution of about £700,000 from the promotion of Max Headroom, the computerised pop hero, and a health contribution from the amusement and machines division. These should push pre-tax profits for the year to about £8m which at 25p, down 5p, gives a prospective p/s of about 13. Although lower than its competitor Virgin, this is a reasonable reflection of the groups prospects.

Micro Focus second half recovery but stays in the red

BY PHILIP COGGAN

Micro Focus Group, the computer software company, moved back into the black with a second half profit of £153,000 but that failed to prevent the group from reporting a pre-tax loss of £329,000 for the year ending January 31 1987.

The group's share price halved in one day two years ago when it announced an unexpected drop in pre-tax profits. In the following year, the group recorded a pre-tax loss of £2.79m, despite a cost-cutting programme which shed around 20 per cent of the workforce.

Ironically, the fall in the share price, once 970p, to its current level of 141p, has forced the group to write down a loan made to a nominee company set up to facilitate a share option scheme. Since the nominee company's ability to repay the loan was dependent on the share price, the company felt it prudent to make a provision of £360,000 which is re-

corded as an extraordinary item.

Above the line, a sharp drop in the doubtful debts provision from £1.25m to £172,000 provided about half of the improvement last year but the main trading pick-up came in Europe where net revenues rose by 42 per cent. However, net revenues were only static in the US and were halved in Japan.

The group has recently concentrated on improving its cash position and there was a net cash inflow of £1.2m last year, compared with an outflow of £4.1m in the previous year. Net bank borrowings by the year end had dropped to £2.5m (£3.7m).

Net revenues were slightly lower at £13.08m (£13.35m) and there was a small tax charge of £15,000 (£761,000 credit). The loss per share was 3p (16.8p) and the company has never paid a dividend.

See Lex

Platinum hit by plastics losses

HEAVY LOSSES incurred by its plastics division dented pre-tax profits at Platinum, the pen and plastics manufacturer, in the year to January 31 1987.

Profits slipped back from £301,000 to £275,000 on turnover up from £10.9m to £12.45m. At the halfway stage Platinum reported profits of £21,000 (£78,000) and a two-for-dividend rights issue to finance acquisitions and cut borrowings.

Mr David Leeming, chairman, said that the profit was better than predictions made last September at the time of the purchase of two plastics companies, Copsa and VPT, and included both an element of profit from these companies and a final contribution from Leonard, an associated company in which Platinum dis-

posed of its interests in July last year.

He said that the losses in the plastics division had now been curbed by the integration of the Copsa business into Platinum's existing moulding plant.

Sales of this operation and of the remaining group activities were now running at a level 15 per cent higher than last year's and with margins and overheads well under control the group was showing a dramatic improvement in its quarterly profits, with the prospects for the current year looking favourable.

Mr Leeming said that the company would no longer be applying for a reduction in share capital. This had proved to be unnecessary following the

certain transfers to the accounts after a review of the company had revealed substantial over-depreciation on fixed assets.

He stressed that the company would continue its policy of expansion by acquisition and a number of opportunities were currently under review. The cash purchase of another distribution business was at an advanced stage.

Tax charges rose to £48,000 (£33,000). Extraordinary items of £356,000 (£28,000 credit) comprised a realisation deficit on RP Collier, adjustments for the sale of Leonard and the surplus from a valuation of fixed assets.

Profit per ordinary share fell from 0.55p to 0.31p. As with last year, no dividends will be paid.

Share Drug half year profits exceed £1m

Share Drug Stores, the Southampton based drug store chain, announced that for the 26 weeks to February 28, 1987, turnover was up 40 per cent from £17.05m to £24.52m and pre-tax profits by 22 per cent from £351,000 to £1.13m.

Mr Alan Prince, chairman, said that during the period the company had opened 20 new stores, bringing the total to 116. In addition two stores were extended in size. Since the beginning of the second half, one new store had been opened and one closed.

Mr Prince said that trading to date in the second half had been satisfactory and the directors were confident that the rapid store opening programme of recent years would lead to further growth as the stores matured over the next few years.

Operating profit in the period was up from £250,000 to £1.14m and net interest payable was down from £98,000 to £19,000. Tax charged was £405,000 (£323,000) and earnings per share worked out at 6.5p (5.5p). The interim dividend is raised from 0.9p to 1.1p.

Govett's Broad St. stake

Govett Strategic Investment Trust has acquired 1.92m shares in Broad Street Group, the fast-expanding financial and corporate public relations and advertising company which came to the USM last September via the reverse takeover of Stanolco, a "shell" company involved in leasing equipment.

The block, representing 8.9 per cent of Broad Street's equity capital was purchased at 56p per share and comprised

the entire holdings of non-executive directors Mr David Landan and Mr Peter Beswick and Alcas International Software Services. Both Mr Landan and Mr Beswick have resigned from the board. Mr Landan was formerly chairman of Stanolco.

Speaking at yesterday's first annual general meeting, Mr Roy Close, Broad Street chairman, said that the group had continued to strengthen its base and as a result had secured a number of new assignments.

Steetley in £12m purchases

Steetley has made its first investment in clay bricks in the US with the \$10m (£6.1m) purchase of Maryland-based Victor Cushman & Sons through its subsidiary, Steetley Brick & Tile.

Cushman makes quality hand and machine moulded facing bricks marketed under the Calvert trade name. Steetley said Cushman's excellent reputation provided it with a firm base for its future development plans in the clay bricks market.

In addition to its equity capital, Cushman had \$5m of term bank debt outstanding.

Steetley has also recently made two major quarry acquisitions in France, with its French operating company Steetley Quarry Products paying £8.7m (£8m) to Chappelle SA and Lemaitre SA. The former purchase takes Steetley into the French road surfacing market and the latter provides access to the important Ile-de-France region around Paris.

At yesterday's meeting, Mr David Dome, the chairman, said 1987 started well, with continuing good demand for construction products in all territories.

GKN purchase

GKN is paying \$8m (£4.1m) for the Sparks Tune-Up division of MAACO Enterprises. Formed in 1981, Sparks, which operates throughout the US through 143 franchised outlets, made a small loss before tax and interest in 1986 on sales of \$6.4m.

This notice is issued in compliance with the requirements of the Council of The Stock Exchange. It does not constitute an invitation to any person to subscribe for or purchase ordinary shares. Application has been made to the Council of The Stock Exchange for the whole of the issued ordinary share capital of the company to be admitted to the Official List.

Dealings in the ordinary shares of the company are expected to commence on 1st May, 1987.

NOTES

Unless otherwise indicated, prices and net dividends are in pence and

updated on the last yearly figures. NFEs are calculated on "net" distributions. Both amounts per share being computed on profit after taxation at the stipulated AGT where applicable; bracketed figures indicate 10% share or more difference if calculated on "net" distributions. Covers are based on "normal" distributions; this compares gross dividend costs per profit after taxation, excluding exceptional profit/losses but including estimated extent of offsettable AGT. Yields are based on mid-price prices, unless stated in AGT of 2% or more and above the value of the

"Tap Soda".
 Highs and Lows marked that have been adjusted to allow for rig
 issues for cash.
 Interim place increased or remained.
 Interim place reduced, placed or deferred.
 Tax-free to non-residents on application.
 Figures or report omitted.
 Not officially UK listed, decisions permitted under Rule 5354A

Same degree of regulation as listed securities.
 Death in under state 535(3).
 Price at time of suspension.
 Indicated dividend after pending scrip and/or rights issue; compares to previous dividend or forecast.
 Merger bid or reorganization in progress.
 Not comparable.
 Same interest; reduced fiscal and/or reduced earnings indicated.

2 Cover allows for conversion of shares not now ranking for dividends
or ranking only for restricted dividends.
2 Cover does not allow for shares which may also rank for dividends
at a future date. No P/E ratio equality provided.
H No par value.
B.F. Belgian Shares. Fr. French Shares. 64 Yield based on minimum
Treasury 81 Rate stays unchanged until maturity of stock, as Assumed

on dividend as full capital, \downarrow Redemption yield, \uparrow Flat yield, \downarrow Accumulated dividend and yield, \downarrow Accumulated dividend and yield after scrip loss, \downarrow Payment from capital sources, \downarrow Kenya, \downarrow Interim higher than permanent total, \downarrow Rights issue pending, \downarrow Earnings based on preliminary figures, \downarrow Dividend and yield exclude a special payment, \downarrow Indicated dividend: cover relates to previous dividend, P/E ratio based on historical annual earnings, \downarrow Forecasts, or estimated annualized dividend rate

merger terms. D Dividend and yield include a special payment; C does not apply to special payments. A Net dividend and yield B Preference dividend passed or deferred. C Canadian.
